Revised Edition  
(*Reprint*)

PUBLISHED BY THE  
UNIVERSITY OF CALCUTTA  
.1936

PRINTED BY BHUPENDRALAL BANERJEE,  
AT THE CALCUTTA UNIVERSITY PRESS, SENATE HOUSE, CALCUTTA.

Reg. No. 954B—May, 1936—I.

## ACKNOWLEDGMENTS

Grateful acknowledgments are due to the authors and owners of copyright named below for permission to reproduce pieces in the present Selections:

Messrs. Macmillan & Co., Ltd., for "Emancipation—Black and White," by T. H. Huxley, for "The Iliad," by A. Lang, W. Leaf and E. Myers and for Chapter IX of "Landscape in History," by Sir Archibald Geikie.

Messrs. Dodd, Mead and Company, Inc., New York, for "Gleanings in Buddha-Fields," by L. Hearn;

Dr. James Stalker for his sermon on "Temptation; "

Mr. H. G. Wells for "The Country of the Blind ";

Messrs. Dent and Sons, Ltd., for "King George V " and "Jam Sahib of Nawanagar " from "Pillars of Society," by A. G. Gardiner;

Messrs. Thornton Butterworth, Ltd., for Chapter I of "Napoleon," by the Rt. Hon. H. A. L. Fisher;

The Cambridge University Press for Chapter I of "The Mysterious Universe," by Sir James Jeans. ,

---

## CONTENTS

### Reflective Pieces

	PAGE.
Treasures Hidden in Books ( <i>Ruskin</i> ) ... ..	1
* Emancipation—Black and White ( <i>Huxley</i> ) ...	10

### Descriptive Sketches

The Northmen ( <i>Newman</i> ) ... ..	19
Early Memorials of Grasmere ( <i>De Quincey</i> ) ...	39
A Lark's Flight ( <i>Alexander Smith</i> ) ... ..	61
* The Jam Sahib of Nawanagar ( <i>Gardiner</i> ) ...	80

### Historical Narratives

The Impeachment of Warren Hastings ( <i>Macaulay</i> ) ... ..	88
The Murder of Thomas Becket ( <i>Froude</i> ) ...	125

### Stories

Will o' the Mill ( <i>Stevenson</i> ) ... ..	148
* The Iliad ( <i>Lang, Leaf and Myers</i> ) ... ..	186
* The Country of the Blind ( <i>Wells</i> ) ... ..	205
* Gleanings in Buddha-Fields ( <i>Hearn</i> ) ...	241

\* Asterisks indicate copyright pieces.

**Biographical Essays**

## REFLECTIVE PIECES

### TREASURES HIDDEN IN BOOKS

Granting that we had both the will and the sense to choose our friends well, how few of us have the power! or, at least, how limited, for most, is the sphere of choice! Nearly all our associations are determined by chance, or necessity; and restricted within a narrow circle. We cannot know whom we would; and those whom we know, we cannot have at our side when we most need them. All the higher circles of human intelligence are, to those beneath, only momentarily and partially open. We may, by good fortune, obtain a glimpse of a great poet, and hear the sound of his voice; or put a question to a man of science, and be answered good-humouredly. We may intrude ten minutes' talk on a cabinet minister, answered probably with words worse than silence, being deceptive; or snatch, once or twice in our lives,

the privilege of throwing a bouquet in the path of a Princess, or arresting the kind glance of a Queen. And yet these momentary chances we covet; and spend our years, and passions, and powers in pursuit of little more than these; while, meantime, there is a society continually open to us, of people who will talk to us as long as we like, whatever our rank or occupation;—talk to us in the best words they can choose, and with thanks if we listen to them. And this society, because it is so numerous and so gentle,—and can be kept waiting round us all day long, not to grant audience, but to gain it;—kings and statesmen lingering patiently in those plainly furnished and narrow ante-rooms, our bookcase shelves,—we make no account of that company,—perhaps never listen to a word they would say, all day long!

You may tell me, perhaps, or think within yourselves, that the apathy with which we regard this company of the noble, who are praying us to listen to them, and the passion with which we pursue the company, probably of the ignoble, who despise us, or who have nothing to teach us, are grounded in this,—that we can see the faces of the living men, and it is themselves, and not their sayings, with which we desire to become familiar. But it is not so. Suppose you never were to see their faces;—suppose you could be put behind a screen in the statesman's cabinet, or the prince's chamber, would you not be glad to listen to their words, though you were forbidden to advance beyond the screen? And when the screen is only a little less, folded in two, instead of four, and you can be hidden behind the cover of the two boards that

bind a book, and listen, all day long, not to the casual talk, but to the studied, determined, chosen addresses of the wisest of men;—this station of audience, and honourable privy council, you despise!

But perhaps you will say that it is because the living people talk of things that are passing, and are of immediate interest to you, that you desire to hear them. Nay; that cannot be so, for the living people will themselves tell you about passing matters, much better in their writings than in their careless talk. But I admit that this motive does influence you, so far as you prefer those rapid and ephemeral writings to slow and enduring writings—books, properly so-called. For all books are divisible into two classes, the books of the hour, and the books of all time. Mark this distinction—it is not one of quality only. It is not merely the bad book that does not last, and the good one that does. It is a distinction of species. There are good books for the hour, and good ones for all time; bad books for the hour and bad ones for all time. I must define the two kinds before I go farther.

The good book of the hour, then,—I do not speak of the bad ones—is simply the useful or pleasant talk of some person whom you cannot otherwise converse with, printed for you. Very useful often, telling you what you need to know; very pleasant often, as a sensible friend's present talk would be. These bright accounts of travels; good-humoured and witty discussions of questions; lively or pathetic story-telling in the form of novel; firm fact-telling, by the real agents concerned in the events of passing history;—all these

books of the hour, multiplying among us as education becomes more general, are a peculiar characteristic and possession of the present age: we ought to be entirely thankful for them, and entirely ashamed of ourselves if we make no good use of them. But we make the worst possible use, if we allow them to usurp the place of true books: for, strictly speaking, they are not books at all, but merely letters or newspapers in good print. Our friend's letter may be delightful, or necessary, to-day: whether worth keeping or not, is to be considered. The newspaper may be entirely proper at breakfast time, but assuredly it is not reading for all day. So though bound up in a volume, the long letter which gives you so pleasant an account of the inns, and roads, and weather last year at such a place, or which tells you that amusing story, or gives you the real circumstances of such and such events, however valuable for occasional reference, may not be, in the real sense of the word, a "book" at all, nor, in the real sense, to be "read." A book is essentially not a talked thing, but a written thing; and written, not with the view of mere communication, but of permanence. The book of talk is printed only because its author cannot speak to thousands of people at once; if he could, he would—the volume is mere *multiplication* of his voice. You cannot talk to your friend in India; if you could, you would; you write instead: that is mere *conveyance* of voice. But a book is written, not to multiply the voice merely, not to carry it merely, but to preserve it. The author has something to say which he perceives to be true and useful, or helpfully beautiful. So far as he knows, no

one has yet said it; so far as he knows, no one else can say it. He is bound to say it, clearly and melodiously if he may; clearly, at all events. In the sum of his life he finds this to be the thing, or group of things, manifest to him;—this the piece of true knowledge, or sight, which his share of sunshine and earth has permitted him to seize. He would fain set it down for ever; engrave it on rock, if he could; saying “This is the best of me; for the rest, I ate, and drank, and slept, loved, and hated like another; my life was as the vapour, and is not; but this I saw and knew: this, if anything of mine, is worth your memory.” That is his “writing;” it is, in his small human way, and with whatever degree of true inspiration is in him, his inscription, or scripture. That is a “Book.” *Handwritten inscription* — *rel. into a*

Perhaps you think no books were ever so written?

But, again, I ask you, do you, at all believe in honesty, or at all in kindness? or do you think there is never any honesty or benevolence in wise people? None of us, I hope, are so unhappy as to think that. Well, whatever bit of a wise man's work is honestly and benevolently done, that bit is his book, or his piece of art. It is mixed always with evil fragments—ill-done, redundant, affected work. But if you read rightly, you will easily discover the true bits, and those *are* the book.

Now books of this kind have been written in all ages by their greatest men:—by great leaders, great statesmen, and great thinkers. These are all at your choice; and life is short. You have heard as much before;—yet have you *measured* and mapped out this

short life and its possibilities? Do you know, if you read this, that you cannot read that—that what you lose to-day you cannot gain to-morrow? Will you go and gossip with your housemaid or your stable-boy, when you may talk with queens and kings; or flatter yourselves that it is with any worthy consciousness of your own claims to respect that you jostle with the common crowd for *entree* here, and audience there, when all the while this eternal court is open to you, with its society wide as the world, multitudinous as its days, the chosen, and the mighty, of every place and time? Into that you may enter always; in that you may take fellowship and rank according to your wish; from that, once entered into it, you can never be outcast but by your own fault; by your aristocracy of companionship there, your own inherent aristocracy will be assuredly tested, and the motives with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them, by the place you desire to take in this company of the Dead.

“The place you desire,” and the place you *fit yourself for*, I must also say; because observe, this court of the past differs from all living aristocracy in this:—it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the guardian of those Elysian gates. In the deep sense, no vile or vulgar person ever enters there. At the portieres of that silent Faubourg St. Germain, there is but brief question, “Do you deserve to enter? Pass. Do you ask to be the companion of nobles? Make yourself noble, and you shall

be. Do you long for the conversation of the wise? Learn to understand it, and you shall hear it. But on other terms?—no. If you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you with considerate pain; but here we neither feign nor interpret; you must rise to the level of our thoughts if you would be gladdened by them, and share our feelings, if you would recognise our presence."

( This, then, is what you have to do, and I admit that it is much. You must, in a word, love these people, if you are to be among them.' No ambition is of any use. They scorn your ambition. You must love them, and show your love in these two following ways.

I.—First, by a true desire to be taught by them, and to enter into their thoughts. To enter into theirs, observe; not to find your own expressed by them. If the **person** who wrote the book is not wiser than you, you need not read it; if he be, he will think differently from you in many respects.

✓ Very ready we are to say of a book, "How good this is—that's exactly what I think!" But the right feeling is, "How strange that is! I never thought of that before, and yet I see it is true; or if I do not now, I hope I shall, some day." But whether thus submissively or not, at least be sure that you go to the author to get at *his* meaning, not to find yours. Judge if afterwards, if you think yourself qualified to do so; but ascertain it first. ✓ And be sure also, if the author

is worth anything, that you will not get at his meaning all at once;—nay, that at his whole meaning you will not for a long time arrive in any wise. Not that he does not say what he means, and in strong words too; but he cannot say it all; and what is more strange, will not, but in a hidden way and in parables, in order that he may be sure you want it. I cannot quite see the reason of this, nor analyse that cruel reticence in the breasts of wise men which makes them always hide their deeper thought. They do not give it you by way of help, but of reward, and will make themselves sure that you deserve it before they allow you to reach it. But it is the same with the physical type of wisdom, gold. There seems, to you and me, no reason why the electric forces of the earth should not carry whatever there is of gold within it at once to the mountain tops, so that kings and people might know that all the gold they could get was there, and without any trouble of digging, or anxiety, or chance, or waste of time, cut it away, and coin as much as they needed. But Nature does not manage it so. She puts it in little fissures in the earth, nobody knows where: you may dig long and find none; you must dig painfully to find any.

✓ And it is just the same with men's best wisdom. When you come to a good book, you must ask yourself, "Am I inclined to work as an Australian miner would? Are my pick-axes and shovels in good order, and am I in good trim myself, my sleeves well up to the elbow, and my breath good, and my temper?" And, keeping the figure a little longer, even at cost of tiresomeness, for it is a thoroughly useful one, the

metal you are in search of being the author's mind or meaning, his words are as the rock which you have to crush and smelt in order to get at it. And your pick-axes are your own care, wit, and learning; your smelting furnace is your own thoughtful soul. Do not hope to get at any good author's meaning without those tools and that fire; often you will need sharpest, finest chiselling, and patientest fusing, before you can gather one grain of the metal.

*John Ruskin.*

## EMANCIPATION—BLACK AND WHITE

Quashie's plaintive inquiry, " Am I not a man and a brother? " seems at last to have received its final reply—the recent decision of the fierce trial by battle on the other side of the Atlantic fully concurring with that long since delivered here in a more peaceful way.

The question is settled; but even those who are most thoroughly convinced that the doom is just, must see good grounds for repudiating half the arguments which have been employed by the winning side; and for doubting whether its ultimate results will embody the hopes of the victors, though they may more than realise the fears of the vanquished. It may be quite true that some negroes are better than some white men; but no rational man, cognisant of the facts, believes that the average negro is the equal, still less the superior, of the average white man. And, if this be true, it is simply incredible that, when all his disabilities are removed, and our prognathous relative has a fair field and no favour, as well as no oppressor, he will be able to compete successfully with his bigger-brained and smaller-jawed rival, in a contest which is to be carried on by thoughts and not by bites. The highest places in the hierarchy of civilisation will assuredly not be within the reach of our dusky cousins, though it

is by no means necessary that they should be restricted to the lowest. But whatever the position of stable equilibrium into which the laws of social gravitation may bring the negro, all responsibility for the result will henceforward lie between Nature and him. The white man may wash his hands of it, and the Caucasian conscience be void of reproach for evermore. And this, if we look to the bottom of the matter, is the real justification for the abolition policy.

The doctrine of equal natural rights may be an illogical delusion; emancipation may convert the slave from a well-fed animal into a pauperised man; mankind may even have to do without cotton shirts; but all these evils must be faced if the moral law, that no human being can arbitrarily dominate over another without grievous damage to his own nature, be, as many think, as readily demonstrable by experiment as any physical truth. If this be true, no slavery can be abolished without a double emancipation, and the master will benefit by freedom more than the freed-man.

The like considerations apply to all the other questions of emancipation which are at present stirring the world—the multifarious demands that classes of mankind shall be relieved from restrictions imposed by the artifice of man, and not by the necessities of Nature. One of the most important, if not the most important, of all these, is that which daily threatens to become the “irrepressible” woman question. What social and political rights have women? What ought they to be allowed, or not

allowed, to do, be, and suffer? And, as involved in, and underlying all these questions, how ought they to be educated?

There are philogynists as fanatical as any " misogynists " who, reversing our antiquated notions, bid the man look upon the woman as the higher type of humanity; who ask us to regard the female intellect as the clearer and the quicker, if not the stronger; who desire us to look up to the feminine moral sense as the purer and the nobler; and bid man abdicate his usurped sovereignty over Nature in favour of the female line. On the other hand, there are persons not to be outdone in all loyalty and just respect for womankind, but by nature hard of head and haters of delusion, however charming, who not only repudiate the new woman-worship which so many sentimentalists and some philosophers are desirous of setting up, but, carrying their audacity further, deny even the natural equality of the sexes. They assert, on the contrary, that in every excellent character, whether mental or physical, the average woman is inferior to the average man, in the sense of having that character less in quantity and lower in quality. Tell these persons of the rapid perceptions and the instinctive intellectual insight of women, and they reply that the feminine mental peculiarities, which pass under these names, are merely the outcome of a greater impressibility to the superficial aspects of things, and of the absence of that restraint upon expression which, in men, is imposed by reflection and a sense of responsibility. Talk of the passive endurance of the weaker sex, and

opponents of this kind remind you that Job was a man, and that, until quite recent times, patience and long-suffering were not counted among the specially feminine virtues. Claim passionate tenderness as especially feminine, and the inquiry is made whether all the best love-poetry in existence (except, perhaps, the "Sonnets from the Portuguese") has not been written by men; whether the song which embodies the ideal of pure and tender passion—"Adelaida"—was written by *Frau* Beethoven; whether it was the Fornarina, or Raphael, who painted the Sistine Madonna. Nay, we have known one such heretic go so far as to lay his hands upon the ark itself, so to speak, and to defend the startling paradox that, even in physical beauty, man is the superior. He admitted, indeed, that there was a brief period of early youth when it might be hard to say whether the prize should be awarded to the graceful undulations of the female figure, or the perfect balance and supple vigour of the male frame. But while our new Paris might hesitate between the youthful Bacchus and the Venus emerging from the foam, he averred that, when Venus and Bacchus had reached thirty, the point no longer admitted of a doubt; the male form having then attained its greatest nobility, while the female is far gone in decadence; and that, at this epoch, womanly beauty, so far as it is independent of grace or expression, is a question of drapery and accessories.

Supposing, however, that all these arguments have a certain foundation; admitting, for a moment, that they are comparable to those by which the

inferiority of the negro to the white man may be demonstrated, are they of any value as against woman-emancipation? Do they afford us the smallest ground for refusing to educate women as well as men—to give women the same civil and political rights as men? No mistake is so commonly made by clever people as that of assuming a cause to be bad because the arguments of its supporters are, to a great extent, nonsensical. And we conceive that those who may laugh at the arguments of the extreme philogynists, may yet feel bound to work heart and soul towards the attainment of their practical ends.

As regards education, for example. Granting the alleged defects of women, is it not somewhat absurd to sanction and maintain a system of education which would seem to have been specially contrived to exaggerate all these defects?

Naturally not so firmly strung, nor so well balanced as boys, girls are in great measure debarred from the sports and physical exercises which are justly thought absolutely necessary for the full development of the vigour of the more favoured sex. Women are, by nature, more excitable than men—prone to be swept by tides of emotion, proceeding from hidden and inward, as well as from obvious and external causes; and female education does its best to weaken every physical counterpoise to this nervous mobility—tends in all ways to stimulate the emotional part of the mind and stunt the rest. We find girls naturally timid, inclined to dependence, born conservatives; and we teach them, that independence is

unladylike; that blind faith is the right frame of mind; and that whatever we may be permitted, and indeed encouraged, to do to our brother, our sister is to be left to the tyranny of authority and tradition. With few insignificant exceptions, girls have been educated either to be drudges, or toys, beneath man; or a sort of angels above him; the highest ideal aimed at oscillating between Clärchen and Beatrice. The possibility that the ideal of womanhood lies neither in the fair saint, nor in the fair sinner; that the female type of character is neither better nor worse than the male, but only weaker; that women are meant neither to be men's guides nor their play-things, but their comrades, their fellows, and their equals, so far as Nature puts no bar to that equality, does not seem to have entered into the minds of those who have had the conduct of the education of girls.

If the present system of female education stands self-condemned, as inherently absurd; and if that which we have just indicated is the true position of woman, what is the first step towards a better state of things? We reply, emancipate girls. Recognise the fact that they share the senses, perceptions, feelings, reasoning powers, emotions, of boys, and that the mind of the average girl is less different from that of the average boy, than the mind of one boy is from that of another; so that whatever argument justifies a given education for all boys, justifies its application to girls as well. So far from imposing artificial restrictions upon the acquirement of knowledge by women, throw every facility in their way.

Let our Faustinas, if they will, toil through the whole round of

“ Juristerei und Medizin,  
Und leider! auch Philosophie.”

Let us have “ sweet girl graduates ” by all means. They will be none the less sweet for a little wisdom; and the “ golden hair ” will not curl less gracefully outside the head by reason of there being brains within. Nay, if obvious practical difficulties can be overcome, let those women who feel inclined to do so descend into the gladiatorial arena of life, not merely in the guise of *retiariæ*, as heretofore, but as bold *sicariæ*, breasting the open fray. Let them, if they so please, become merchants, barristers, politicians. Let them have a fair field, but let them understand, as the necessary correlative, that they are to have no favour. Let Nature alone sit high above the lists, “ rain influence and judge the prize.”

And the result? For our parts, though loth to prophesy, we believe it will be that of other emancipations. Women will find their place, and it will neither be that in which they have been held, nor that to which some of them aspire. Nature’s old salique law will not be repealed, and no change of dynasty will be effected. The big chests, the massive brains, the vigorous muscles and stout frames of the best men will carry the day, whenever it is worth their while to contest the prizes of life with the best women. And the hardship of it is, that the very

improvement of the women will lessen their chances. Better mothers will bring forth better sons, and the impetus gained by the one sex will be transmitted, in the next generation, to the other. The most Darwinian of theorists will not venture to propound the doctrine, that the physical disabilities under which women have hitherto laboured in the struggle for existence with men are likely to be removed by even the most skilfully conducted process of educational selection.

We are, indeed, fully prepared to believe that the bearing of children may, and ought to, become as free from danger and long disability to the civilised woman as it is to the savage; nor is it improbable that, as society advances towards its right organisation, motherhood will occupy a less space of woman's life than it has hitherto done. But still, unless the human species is to come to an end altogether—a consummation which can hardly be desired by even the most ardent advocate of “women's rights”—somebody must be good enough to take the trouble and responsibility of annually adding to the world exactly as many people as die out of it. In consequence of some domestic difficulties, Sydney Smith is said to have suggested that it would have been good for the human race had the model offered by the hive been followed, and had all the working part of the female community been neuters. Failing any thorough-going reform of this kind, we see nothing for it but the old division of humanity into men potentially, or actually, fathers, and women potentially, if not actually, mothers. And we fear

that so long as this potential motherhood is her lot, woman will be found to be fearfully weighted in the race of life.

The duty of man is to see that not a grain is piled upon that load beyond what Nature imposes; that injustice is not added to inequality.

*Thomas Henry Huxley.*

## DESCRIPTIVE SKETCHES

### THE NORTHMEN

#### 1

The collision between Russia and Turkey, which at present engages public attention, is only one scene in that persevering conflict, which is carried on, from age to age, between the North and the South,—the North aggressive, the South on the defensive. In the earliest histories this conflict finds a place; and hence, when the inspired Prophets denounce defeat and captivity upon the chosen people or other transgressing nations, who were inhabitants of the South, the North is pointed out as the quarter from which the judgment is to descend.

Nor is this conflict, nor is its perpetuity, difficult of explanation. The South ever has gifts of nature to tempt the invader, and the North ever has multitudes to be tempted by them. The North has been fitly called the storehouse of nations. Along the breadth of Asia, and thence to Europe, from the Chinese sea on the East, to the Euxine on the West, nay to the Rhine, nay even to the Bay of Biscay, running between and beyond the 40th and 60th degrees of latitude, and above the fruitful South, stretches a vast plain, which has been from time immemorial what may be called the wild common and place of encampment, or again, the highway, or

the broad horse-path, of restless population seeking a home. The European portion of this tract has in Christian times been reclaimed from its state of desolation, and is at present occupied by civilized communities; but even now the East remains for the most part in its primitive neglect, and is in possession of roving barbarians.

It is the Eastern portion of this vast territory which I have pointed out, that I have now, Gentlemen, principally to keep before your view. It goes by the general name of Tartary: in width from north to south it is said to vary from 400 to 1,100 miles, while in length from east to west it is not far short of 5,000. It is of very different elevation in different parts, and it is divided longitudinally by as many as three or four mountain chains of great height. The valleys which lie between them necessarily confine the wandering savage to an eastward or westward course, and the slope of the land westward invites him to that direction rather than to the east. Then, at a certain point in these westward passages, as he approaches the meridian of the Sea of Aral, he finds the mountain-ranges cease, and open upon him the opportunity, as well as the temptation, to roam to the North or to the South also. Up in the East, from whence he came, in the most northerly of the lofty ranges which I have spoken of, is a great mountain, which some geographers have identified with the classical Imaus; it is called by the Saracens Caf, by the Turks Altai. Sometimes too it has the name of the Girdle of the Earth, from the huge appearance of the chain to which it belongs, sometimes

of the Golden Mountain, from the gold, as well as other metals, with which its sides abound. It is said to be at an equal distance of 2,000 miles from the Caspian, the Frozen Sea, the North Pacific Ocean, and the Bay of Bengal: and, being in situation the furthest withdrawn from West and South, it is in fact the high capital or metropolis of the vast Tartar country, which it overlooks, and has sent forth, in the course of ages, innumerable populations into the illimitable and mysterious regions around it, regions protected by their inland character both from the observation and the civilizing influence of foreign nations.

To eat bread in the sweat of his brow is the original punishment of mankind; the indolence of the savage shrinks from the obligation, and looks out for methods of escaping it. Corn, wine, and oil have no charms for him at such a price; he turns to the brute animals which are his aboriginal companions, the horse, the cow, and the sheep; he chooses to be a grazier rather than to till the ground. He feeds his horses, flocks, and herds on its spontaneous vegetation, and then in turn he feeds himself on their flesh. He remains on one spot while the natural crop yields them sustenance; when it is exhausted, he migrates to another. He adopts, what is called, the life of a *nomad*. In maritime countries indeed he must have recourse to other expedients; he fishes in the stream, or among the rocks of the beach. In the woods he

betakes himself to roots and wild honey; or he has a resource in the chase, an occupation, ever ready at hand, exciting, and demanding no perseverance. But when the savage finds himself inclosed in the continent and the wilderness, he draws the domestic animals about him, and constitutes himself the head of a sort of brute polity. He becomes a king and father of the beasts, and by the economical arrangements which this pretension involves, advances a first step, though a low one, in civilization, which the hunter or the fisher does not attain.

And here, beyond other animals, the horse is the instrument of that civilization. It enables him to govern and to guide his sheep and cattle; it carries him to the chase, when he is tempted to it; it transports him and his from place to place; while his very locomotion and shifting location and independence of the soil define the idea, and secure the existence, both of a household and of personal property. Nor is this all which the horse does for him; it is food both in its life and in its death;—when dead, it nourishes him with its flesh, and, while alive, it supplies its milk for an intoxicating liquor which, under the name of *koumiss*, has from time immemorial served the Tartar instead of wine and spirits. The horse then is his friend under all circumstances, and inseparable from him; he may be even said to live on horseback, he eats and sleeps without dismounting, till the fable has been current that he has a centaur's nature, half man and half beast. Hence it was that the ancient Saxons had a horse for their ensign in war; thus it is that the

Ottoman ordinances are, I believe, to this day dated from "the imperial stirrup," and the display of horsetails at the gate of the palace is the Ottoman signal of war. Thus too, as the Catholic ritual measures intervals by "a Miserere," and St. Ignatius in his Exercises by "a Pater Noster," so the Turcomans and the Usbeks speak familiarly of the time of a gallop. But as to houses, on the other hand, the Tartars contemptuously called them the sepulchres of the living, and, when abroad, could hardly be persuaded to cross a threshold. Their women, indeed, and children could not live on horseback; them some kind of locomotive dwelling must receive, and a less noble animal must draw. The old historians and poets of Greece and Rome describe it, and the travellers of the middle ages repeat and enlarge the classical description of it. The strangers from Europe gazed with astonishment on huge wattled houses set on wheels, and drawn by no less than twenty-two oxen.

## 8

From the age of Job, the horse has been the emblem of battle; a mounted shepherd is but one removed from a knight-errant, except in the object of his excursions; and the discipline of a pastoral station from the nature of the case is not very different from that of a camp. There can be no community without order, and a community in motion demands a special kind of organization. Provision must be made for the separation, the protection, and the sustenance of men,

women, and children, horses, flocks, and cattle. To march without straggling, to halt without confusion, to make good their ground, to reconnoitre neighbourhoods, to ascertain the character and capabilities of places in the distance, and to determine their future route, is to be versed in some of the most important duties of the military art. Such pastoral tribes are already an army in the field, if not as yet against any human foe, at least against the elements. They have to subdue, or to check, or to circumvent, or to endure the opposition of earth, water, and wind, in their pursuits of the mere necessities of life. The war with wild beasts naturally follows, and then the war on their own kind. Thus when they are at length provoked or allured to direct their fury against the inhabitants of other regions, they are ready-made soldiers. They have a soldier's qualifications in their independence of soil, freedom from local ties, and practice in discipline; nay, in one respect they are superior to any troops which civilized countries can produce. One of the problems of warfare is how to feed the vast masses which its operations require; and hence it is commonly said, that a well-managed commissariat is a chief condition of victory. Few people can fight without eating;—Englishmen as little as any. I have heard of a work of a foreign officer, who took a survey of the European armies previously to the revolutionary war; in which he praised our troops highly, but said they would not be effective till they were supported by a better commissariat. Moreover, one commonly hears, that the supply of this deficiency is one of the very merits of the great Duke of

Wellington. So it is with civilized races; but the Tartars, as is evident from what I have already observed, have in their wars no need of any commissariat at all; and that, not merely from the unscrupulousness of their foraging, but because they find in the instruments of their conquests the staple of their food. "Corn is a bulky and perishable commodity," says an historian; "and the large magazines, which are indispensably necessary for the subsistence of civilized troops, are difficult and slow of transport." But, not to say that even their flocks and herds were fitted for rapid movement, like the nimble sheep of Wales and the wild cattle of North Britain, the Tartars could even dispense with these altogether. If straitened for provisions, they ate the chargers which carried them to battle; indeed they seemed to account their flesh a delicacy, above the reach of the poor, and in consequence were enjoying a banquet in circumstances when civilized troops would be staving off starvation. And with a view to such accidents, they have been accustomed to carry with them in their expeditions a number of supernumerary horses, which they might either ride or eat, according to the occasion. It was an additional advantage to them in their warlike movements, that they were little particular whether their food had been killed for the purpose, or had died of disease. Nor is this all: their horses' hides were made into tents and clothing, perhaps into bottles and coracles; and their intestines into bowstrings.

Trained then, as they are, to habits which in themselves invite to war, the inclemency of their native climate has been a constant motive for them

to seek out settlements and places of sojournment elsewhere. The spacious plains, over which they roam, are either monotonous grazing lands, or inhospitable deserts relieved with green valleys or recesses. The cold is intense in a degree of which we have no experience in England, though we lie to the north of them. This arises in a measure from their distance from the sea, and again from their elevation of level, and further from the saltpetre with which their soil or their atmosphere is impregnated. The sole influence then of their fatherland, if I may apply to it such a term, is to drive its inhabitants from it to the West or to the South.

## 4

I have said that the geographical features of their country carry them forward in those two directions, the South and the West; not to say that the ocean forbids them going eastward, and the North does but hold out to them a climate more inclement than their own. Leaving the district of Mongolia in the furthest East, high above the north of China, and passing through the long and broad valleys which I spoke of just now, the emigrants at length would arrive at the edge of that elevated plateau, which constitutes Tartary proper. They would pass over the high region of Pamir, where are the sources of the Oxus, they would descend the terrace of the Bolor, and the steps of Badakshan, and gradually reach a vast region, flat on the whole as the expanse they had left, but as strangely depressed below the level of the sea, as

Tartary is lifted above it. This is the country, forming the two basins of the Aral and the Caspian, which terminates the immense Asiatic plain, and may be vaguely designated by the name of Turkistan. Hitherto the necessity of their route would force them on, in one multitudinous emigration, but now they may diverge, and have diverged. If they were to cross the Jaxartes and the Oxus, and then to proceed southward, they would come to Khorasan, the ancient Bactriana, and so to Afghanistan and to Hindostan on the east, or to Persia on the west. But if, instead, they continued their westward course, then they would skirt the north coast of the Aral and the Caspian, cross the Volga, and there would have a second opportunity, if they chose to avail themselves of it, of descending southwards, by Georgia and Armenia, either to Syria or to Asia Minor. Refusing this diversion, and persevering onwards to the west, at length they would pass the Don, and descend upon Europe across the Ukraine, Bessarabia, and the Danube.

Such are the three routes,—across the Oxus, across the Caucasus, and across the Danube,—which the pastoral nations have variously pursued at various times, when their roving habits, their warlike propensities, and their discomforts at home, have combined to precipitate them on the industry, the civilization, and the luxury of the West and of the South. And at such times, as might be inferred from what has been already said, their invasions have been rather irruptions, inroads, or, what are called, raids, than a proper conquest and occupation of the countries

which have been their victims. They would go forward, 200,000 of them at once, at the rate of 100 miles a day, swimming the rivers, galloping over the plains, intoxicated with the excitement of air and speed, as if it were a fox-chase, or full of pride and fury at the reverses which set them in motion; seeking indeed their fortunes, but seeking them on no plan; like a flight of locusts, or a swarm of angry wasps smoked out of their nest. They would seek for immediate gratification, and let the future take its course. They would be bloodthirsty and rapacious, and would inflict ruin and misery to any extent; and they would do tenfold more harm to the invaded, than benefit to themselves. They would be powerful to break down; helpless to build up. They would in a day undo the labour and skill, the prosperity of years; but they would not know how to construct a polity, how to conduct a government, how to organize a system of slavery, or to digest a code of laws. Rather they would despise the sciences of politics, law, and finance; and, if they honoured any profession or vocation, it would be such as bore immediately and personally on themselves. Thus we find them treating the priest and the physician with respect, when they found such among their captives; but they could not endure the presence of a lawyer. How could it be otherwise with those who may be called the outlaws of the human race? They did but justify the seeming paradox of the traveller's exclamation, who, when at length, after a dreary passage through the wilderness, he came in sight of a gibbet, returned thanks that he had now arrived at a civilized country. "The pastoral

tribes," says the writer I have already quoted, "who were ignorant of the distinction of landed property, must have disregarded the use, as well as the abuse, of civil jurisprudence; and the skill of an eloquent lawyer would excite only their contempt or their abhorrence." And he refers to an outrage on the part of a barbarian of the North, who, not satisfied with cutting out a lawyer's tongue, sewed up his mouth, in order, as he said, that the viper might no longer hiss. The well-known story of the Czar Peter, himself a Tartar, is here in point. When told there were some thousands of lawyers at Westminster, he is said to have observed that there had been only two in his own dominions, and he had hung one of them.

## 5

Now I have thrown the various inhabitants of the Asiatic plain together, under one description, not as if I overlooked, or undervalued, the distinction of races, but because I have no intention of committing myself to any statements on so intricate and interminable a subject as ethnology. In spite of the controversy about skulls, and skins, and languages, by means of which man is to be traced up to his primitive condition, I consider place and climate to be a sufficiently real aspect under which he may be regarded, and with this I shall content myself. I am speaking of the inhabitants of those extended plains, whether Scythians, Massagetæ, Sarmatians, Huns, Moguls, Tartars, Turks, or anything else; and whether or no any of them or all of them are identical with

each other in their pedigree and antiquities. Position and climate create habits; and, since the country is called Tartary, I shall call them Tartar habits, and the populations which have inhabited it and exhibited them, Tartars, for convenience' sake, whatever be their family descent. From the circumstances of their situation, these populations have in all ages been shepherds, mounted on horseback, roaming through trackless spaces, easily incited to war, easily formed into masses, easily dissolved again into their component parts, suddenly sweeping across continents, suddenly descending on the south or west, suddenly extinguishing the civilization of ages, suddenly forming empires, suddenly vanishing, no one knows how, into their native north.

Such is the fearful provision for havoc and devastation, when the Divine Word goes forth for judgment upon the civilized world, which the North has ever had in store; and the regions on which it has principally expended its fury, are those, whose fatal beauty, or richness of soil, or perfection of cultivation, or exquisiteness of produce, or amenity of climate, makes them objects of desire to the barbarian. Such are China, Hindostan, Persia, Syria, and Anatolia or the Levant, in Asia; Greece, Italy, Sicily, and Spain, in Europe; and the northern coast of Africa.

These regions, on the contrary, have neither the inducement nor the means to retaliate upon their ferocious invaders. The relative position of the combatants must always be the same, while the combat lasts. The South has nothing to win, the North nothing to lose; the North nothing to offer, the South

nothing to covet. Nor is this all: the North as in an impregnable fortress, defies the attack of the South. Immense trackless solitudes; no cities, no tillage, no roads; deserts, forests, marshes; bleak table-lands, snowy mountains; unlocated, flitting, receding populations; no capitals, or marts, or strong places, or fruitful vales, to hold as hostages for submission; fearful winters and many months of them;—nature herself fights and conquers for the barbarian. What madness shall tempt the South to undergo extreme risks without the prospect or chance of a return? True it is, ambition, whose very life is a fever, has now and then ventured on the reckless expedition; but from the first page of history to the last, from Cyrus to Napoleon, what has the Northern war done for the greatest warriors but destroy the flower of their armies and the *prestige* of their name? Our maps, in placing the North at the top, and the South at the bottom of the sheet, impress us, by what may seem a sophistical analogy, with the imagination that Huns or Moguls, Kalmucks, or Cossacks, have been a superincumbent mass, descending by a sort of gravitation upon the fair territories which lie below them. Yet this is substantially true;—though the attraction towards the South is of a moral, not of a physical nature, yet an attraction there is, and a huge conglomeration of destructive elements hangs over us, and from time to time rushes down with an awful irresistible momentum. Barbarism is ever impending over the civilized world. Never, since history began, has there been so long a cessation of this law of human society, as in the period in which we live. The

descent of the Turks on Europe was the last instance of it, and that was completed four hundred years ago. They are now themselves in the position of those races, whom they themselves formerly came down upon.

## 6

As to the instances of this conflict between North and South in the times before the Christian era, we know more of them from antiquarian research than from history. The principal of those which ancient writers have recorded are contained in the history of the Persian Empire. The wandering Tartar tribes went at that time by the name of Scythians, and had possession of the plains of Europe as well as of Asia. Central Europe was not at that time the seat of civilized nations; but from the Chinese Sea even to the Rhine or Bay of Biscay, a course of many thousand miles, the barbarian emigrant might wander on, as necessity or caprice impelled him. Darius assailed the Scythians of Europe; Cyrus, his predecessor, the Scythians of Asia.

As to Cyrus, writers are not concordant on the subject, but the celebrated Greek historian, Herodotus, whose accuracy of research is generally confessed, makes the great desert, which had already been fatal, according to some accounts, to the Assyrian Semiramis, the ruin also of the founder of the Persian Empire. He tells us that Cyrus led an army against the Scythian tribes (*Massagetæ*, as they were called), who were stationed to the east of the Caspian; and

that they, on finding him prepared to cross the river which bounded their country to the South, sent him a message which well illustrates the hopelessness of going to war with them. They are said to have given him his choice of fighting them either three days' march within their own territory, or three days' march within his; it being the same to them whether he made himself a grave in their inhospitable deserts, or they a home in his flourishing provinces. He had with him in his army a celebrated captive, the Lydian King Cræsus, who had once been head of a wealthy empire, till he had succumbed to the fortunes of a more illustrious conqueror; and on this occasion he availed himself of his advice. Cræsus cautioned him against admitting the barbarians within the Persian border, and counselled him to accept their permission of his advancing into their territory, and then to have recourse to stratagem. "As I hear," he says in the simple style of the historian, which will not bear translation, "the Massagetæ have no experience of the good things of life. Spare not then to serve up many sheep, and add thereunto stoups of neat wine, and all sorts of viands. Set out this banquet for them in our camp, leave the refuse of the army there, and retreat with the body of your troops upon the river. If I am not mistaken, the Scythians will address themselves to all this good cheer, as soon as they fall in with it, and then we shall have the opportunity of a brilliant exploit." I need not pursue the history further than to state the issue. In spite of the immediate success of his *ruse de guerre*, Cyrus was eventually defeated, and lost both his army and his

life. The Scythian Queen Tomyris, in revenge for the lives which he had sacrificed to his ambition, is related to have cut off his head and plunged it into a vessel filled with blood, saying, "Cyrus, drink your fill." Such is the account given us by Herodotus; and, even if it is to be rejected, it serves to illustrate the difficulties of an invasion of Scythia; for legends must be framed according to the circumstances of the case, and grow out of probabilities, if they are to gain credit, and if they have actually succeeded in gaining it.

Our knowledge of the expedition of Darius in the next generation, is more certain. This fortunate monarch, after many successes, even on the European side of the Bosphorus, impelled by that ambition, which holy Daniel had already seen in prophecy to threaten West and North as well as South, towards the end of his life directed his arms against the Scythians who inhabited the country now called the Ukraine. His pretext for this expedition was an incursion which the same barbarians had made into Asia, shortly before the time of Cyrus. They had crossed the Don, just above the Sea of Azoff, had entered the country now called Circassia, had threaded the defiles of the Caucasus, and had defeated the Median King Cyaxares, the grandfather of Cyrus. Then they overran Armenia, Cappadocia, Pontus, and part of Lydia, that is, a great portion of Anatolia or Asia Minor; and managed to establish themselves

in the country for twenty-eight years, living by plunder and exaction. In the course of this period, they descended into Syria, as far as to the very borders of Egypt. The Egyptians bought them off, and they turned back; however, they possessed themselves of a portion of Palestine, and gave their name to one town, Scythopolis, in the territory of Manasses. This was in the last days of the Jewish monarchy, shortly before the captivity. At length Cyaxares got rid of them by treachery; he invited the greater number of them to a banquet, intoxicated, and massacred them. Nor was this the termination of the troubles, of which they were the authors; and I mention the sequel, because both the office which they undertook and their manner of discharging it, their insubordination and their cruelty, are an anticipation of some passages in the early history of the Turks. The Median King had taken some of them into his pay, made them his huntsmen, and submitted certain noble youths to their training. Justly or unjustly they happened one day to be punished for leaving the royal table without its due supply of game: without more ado, the savages in revenge murdered and served up one of these youths instead of the venison which had been expected of them, and made forthwith for the neighbouring kingdom of Lydia. A war between the two states was the consequence.

But to return to Darius:—it is said to have been in retaliation for these excesses that he resolved on his expedition against the Scythians, who, as I have mentioned, were in occupation of the district between the Danube and the Don. For this purpose he

advanced from Susa in the neighbourhood of the Persian Gulf, through Assyria and Asia Minor to the Bosphorus, just opposite to the present site of Constantinople, where he crossed over into Europe. Thence he made his way, with the incredible number of 700,000 men, horse and foot, to the Danube, reducing Thrace, the present Roumelia, in his way. When he had crossed that stream, he was at once in Scythia; but the Scythians had adopted the same sort of strategy, which in the beginning of this century was practised by their successors against Napoleon. They cut and carried off the green crops, stopped up their wells or spoilt their water, and sent off their families and flocks to places of safety. Then they stationed their outposts just a day's journey before the enemy, to entice him on. He pursued them, they retreated; and at length he found himself on the Don, the further boundary of the Scythian territory. They crossed the Don, and he crossed it too, into desolate and unknown wilds; then, eluding him altogether, from their own knowledge of the country, they made a circuit, and got back into their own land again.

Darius found himself outwitted, and came to a halt: how he had victualled his army, whatever deduction we make for its numbers, does not appear; but it is plain that the time must come, when he could not proceed. He gave the order for retreat. Meanwhile, he found an opportunity of sending a message to the Scythian chief, and it was to this effect:—"Perverse man, take your choice; fight me or yield." The Scythians intended to do neither, but

contrived, as before, to harass the Persian retreat. At length an answer came; not a message, but an ominous gift; they sent Darius a bird, a mouse, a frog, and five arrows; without a word of explanation. Darius himself at first hailed it as an intimation of submission; in Greece to offer earth and water was the sign of capitulation, as, in a sale of land in our own country, a clod from the soil still passes, or passed lately, from seller to purchaser, as a symbol of the transfer of possession. The Persian king, then, discerned in these singular presents a similar surrender of territorial jurisdiction. But another version, less favourable to his vanity and his hopes, was suggested by one of his courtiers, and it ran thus: "Unless you can fly like a bird, or burrow like a mouse, or swim the marshes like a frog, you cannot escape our arrows." Whichever interpretation was the true one, it needed no message from the enemy to inflict upon Darius the presence of the dilemma suggested in this unpleasant interpretation. He yielded to imperative necessity, and hastened his escape from the formidable situation in which he had placed himself, and through great good fortune succeeded in effecting it. He crossed the sea just in time; for the Scythians came down in pursuit, as far as the coast, and returned home laden with booty.

This is pretty much all that is definitely recorded in history of the ancient Tartars. Alexander, in a later age, came into conflict with them in the region called Sogdiana which lies at the foot of that high plateau of central and eastern Asia, which I have designated as their proper home. But he was too

prudent to be entangled in extended expeditions against them, and having made trial of their formidable strength, and made some demonstrations of the superiority of his own, he left them in possession of their wildernesses.

*John Henry Newman.*

---

## EARLY MEMORIALS OF GRASMERE

Soon after my return to Oxford in 1807-8, I received a letter from Miss Wordsworth, asking for any subscriptions I might succeed in obtaining amongst my college friends in aid of the funds then raising on behalf of an orphan family, who had become such by an affecting tragedy that had occurred within a few weeks from my visit to Grasmere.

Miss Wordsworth's simple but fervid memoir not being within my reach at this moment, I must trust to my own recollections and my own impressions to retrace the story; which, after all, is not much of a story to excite or to impress, unless for those who can find a sufficient interest in the trials and calamities of hard-working peasants, and can reverence the fortitude which, being lodged in so frail a tenement as the person of a little girl, not much, if anything, above nine years old, could face an occasion of sudden mysterious abandonment, and could tower up, during one night, into the perfect energies of womanhood, under the mere pressure of difficulty, and under the sense of new-born responsibilities awfully bequeathed to her, and in the most lonely, perhaps, of English habitations.

The little valley of Easedale,—which, and the neighbourhood of which, were the scenes of these interesting events,—is on its own account one of the most impressive solitudes amongst the mountains of the Lake district; and I must pause to describe it. Easedale is impressive *as* a solitude; for the depth of

the seclusion is brought out and forced more pointedly upon the feelings by the thin scattering of houses over its sides, and over the surface of what may be called its floor. These are not above six at the most; and one, the remotest of the whole, was untenanted for all the thirty years of my acquaintance with the place. *Secondly*, it is impressive from the excessive loveliness which adorns its little area. This is broken up into small fields and miniature meadows, separated, not—as too often happens, with sad injury to the beauty of the Lake country—by stone walls, but sometimes by little hedgerows, sometimes by little sparkling, pebbly “becks,” lustrous to the very bottom, and not too broad for a child’s flying leap, and sometimes by wild self-sown woodlands of birch, alder, holly, mountain ash, and hazel, that meander through the valley, intervening the different estates with natural sylvan marches, and giving cheerfulness in winter by the bright scarlet of their berries. But there is a third advantage possessed by this Easedale, above other rival valleys, in the sublimity of its mountain barriers. In one of its many rocky recesses is seen a “force” (such is the local name for a cataract), white with foam, descending at all seasons with considerable strength, and, after the melting of snows, with an Alpine violence.

Such is the solitude—so deep and so rich in miniature beauty—of Easedale; and in this solitude it was that George and Sarah Green, two poor and hard-working peasants, dwelt, with a numerous family of small children. Poor as they were, they had won the general respect of the neighbourhood, from

the uncomplaining firmness with which they bore the hardships of their lot, and from the decent attire in which the good mother of the family contrived to send out her children to the Grasmere parish-school. It is a custom, and a very ancient one, in Westmorland—the same custom (resting on the same causes) I have witnessed also in southern Scotland—that any sale by auction of household furniture (and seldom a month passes without something of the sort) forms an excuse for the good women, throughout the whole circumference of perhaps four or five valleys, to assemble at the place of sale, with the nominal purpose of buying something they may happen to want. A sale, except it were of the sort exclusively interesting to farming *men*, is a kind of general intimation to the country, from the owner of the property, that he will, on that afternoon, be “at home” to all comers, and hopes to see as large an attendance as possible. Accordingly, it was the almost invariable custom—and often, too, when the parties were far too poor for such an effort of hospitality—to make ample provision, not of eatables, but of liquor, for all who came. Even a gentleman who should happen to present himself on such a festal occasion, by way of seeing the “humours” of the scene, was certain of meeting the most cordial welcome. The good woman of the house more particularly testified her sense of the honour done to her, and was sure to seek out some cherished and solitary article of china—a wreck from a century back—in order that he, being a porcelain man among so many delf men and women, might have a porcelain cup to drink from.

The main secret of attraction at these sales—many of which I have attended—was the social rendezvous thus effected between parties so remote from each other (either by real distance or by virtual distance resulting from the separation effected by mountains 3,000 feet high) that, in fact, without some such common object, they would not be likely to hear of each other for months, or actually to meet for years. This principal charm of the “gathering,” seasoned, doubtless, to many by the certain anticipation that the whole budget of rural gossip would then and there be opened, was not assuredly diminished to the men by the anticipation of excellent ale (usually brewed six or seven weeks before, in preparation for the event), and possibly of still more excellent *powsowdy* (a combination of ale, spirits, and spices); nor to the women by some prospect not so inevitably fulfilled, but pretty certain in a liberal house, of communicating their news over excellent tea. Even the auctioneer was always a character in the drama: he was always a rustic old humorist, and a jovial drunkard, privileged in certain good-humoured liberties and jokes with all bidders, gentle or simple, and furnished with an ancient inheritance of jests appropriate to the articles offered for sale,—jest that had, doubtless, done their office from Elizabeth’s golden days, but no more, on that account, failing of their expected effect, with either man or woman of this nineteenth century, than the sun fails to gladden the heart because it is that same old superannuated sun that has gladdened it for thousands of years.

One thing, however, in mere justice to the Dalesmen of Westmorland and Cumberland, I am bound in this place to record. Often as I have been at these sales, and years before even a scattering of gentry began to attend, yet so true to the natural standard of politeness was the decorum uniformly maintained that even the old buffoon of an auctioneer never forgot himself so far as to found upon any article of furniture a jest fitted to call up a painful blush in any woman's face. He might, perhaps, go so far as to awaken a little rosy confusion upon some young bride's countenance, when pressing a cradle upon her attention; but never did I hear him utter, nor would he have been tolerated in uttering a scurrilous or disgusting jest, such as might easily have been suggested by something offered at a household sale. Such jests as these I heard for the first time at a sale in Grasmere in 1814; and I am ashamed to say it, from some "gentlemen" of a great city. And it grieved me to see the effect, as it expressed itself upon the manly faces of the grave Dalesmen—a sense of insult offered to their women, who met in confiding reliance upon the forbearance of the men, and upon their regard for the dignity of the female sex; this feeling struggling with the habitual respect they are inclined to show towards what they suppose gentle blood and superior education. Taken generally, however, these were the most picturesque and festal meetings which the manners of the country produced. There you saw all ages and both sexes assembled; there you saw old men whose heads would have been studies for Guido; there you saw

the most colossal and stately figures amongst the young men that England has to show; there the most beautiful young women. There it was that the social benevolence, the innocent mirth, and the neighbourly kindness of the people, most delightfully expanded, and expressed themselves with the least reserve.

To such a scene it was,—to a sale of domestic furniture at the house of some proprietor in Langdale,—that George and Sarah Green set forward in the forenoon of a day fated to be their last on earth. The sale was to take place in Langdalehead; to which, from their own cottage in Easedale, it was possible in daylight, and supposing no mist upon the hills, to find out a short cut of not more than five or six miles. By this route they went; and, notwithstanding the snow lay on the ground, they reached their destination in safety. The attendance at the sale must have been diminished by the rigorous state of the weather; but still the scene was a gay one as usual.

The time for general separation was considerably after sunset; and the final recollections of the crowd with respect to George and Sarah Green were that, upon their intention being understood to retrace their morning path, and to attempt the perilous task of dropping down into Easedale from the mountains above Langdalehead, a sound of remonstrance arose from many quarters. However, at such a moment, when everybody was in the hurry of departure, and to such persons (persons, I mean, so mature in years and in local knowledge), the opposition could not

be very obstinate: party after party rode off; the meeting melted away, or, as the northern phrase is, *scaled*; and at length nobody was left of any weight that could pretend to influence the decision of elderly people. They quitted the scene, professing to obey some advice or other upon the choice of roads; but, at as early a point as they could do so unobserved, began to ascend the hills everywhere open from the rude carriage-way. After this they were seen no more. They had disappeared into the cloud of death. Voices were heard, some hours afterwards from the mountains—voices, as some thought, of alarm: others said, No,—that it was only the voices of jovial people, carried by the wind into uncertain regions. The result was that no attention was paid to the sounds.

That night, in little peaceful Easedale, six children sat by a peat fire, expecting the return of their parents, upon whom they depended for their daily bread. Let a day pass, and they were starving. Every sound was heard with anxiety; for all this was reported many hundred times to Miss Wordsworth, and to those who, like myself, were never wearied of hearing the details. Every sound, every echo amongst the hills, was listened to for five hours, from seven to twelve. At length the eldest girl of the family—about nine years old—told her little brothers and sisters to go to bed. They had been trained to obedience; and all of them, at the voice of their eldest sister, went off fearfully to their beds. What could be *their* fears it is difficult to say; they had no knowledge to instruct them in the dangers of

the hills; but the eldest sister always averred that they had as deep a solicitude as she herself had about their parents. Doubtless she had communicated her fears to *them*. Some time in the course of the evening—but it was late, and after midnight—the moon arose, and shed a torrent of light upon the Langdale fells, which had already, long hours before, witnessed in darkness the death of their parents.

That night, and the following morning, came a further and a heavier fall of snow; in consequence of which the poor children were completely imprisoned, and cut off from all possibility of communicating with their next neighbours. The brook was too much for *them* to leap; and the little, crazy wooden bridge could not be crossed, or even approached with safety, from the drifting of the snow having made it impossible to ascertain the exact situation of some treacherous hole in its timbers, which, if trod upon, would have let a small child drop through into the rapid waters. Their parents did not return. For some hours of the morning the children clung to the hope that the extreme severity of the night had tempted them to sleep in Langdale; but this hope forsook them as the day wore away. Their father, George Green, had served as a soldier, and was an active man, of ready resources, who would not, under any circumstances, have failed to force a road back to his family, had he been still living; and this reflection, or rather semi-conscious feeling, which the awfulness of their situation forced upon the minds of all but the mere infants, awakened them to the whole extent of their calamity. Wonderful it is to

see the effect of sudden misery, sudden grief, or sudden fear, in sharpening (where they do not utterly upset) the intellectual perceptions. Instances must have fallen in the way of most of us. And I have noticed frequently that even sudden and intense bodily pain forms part of the machinery employed by nature for quickening the development of the mind. The perceptions of infants are not, in fact, excited by graduated steps and continuously, but *per saltum*, and by unequal starts. At least, within the whole range of my own experience, I have remarked that, after any very severe fit of those peculiar pains to which the delicate digestive organs of most infants are liable, there always became apparent on the following day a very considerable increase of vital energy and of quickened attention to the objects around them. The poor desolate children of Blentarn Ghyll, hourly becoming more pathetically convinced that they were orphans, gave many evidences of this awaking power as lodged, by a providential arrangement, in situations of trial that most require it. They huddled together, in the evening, round their hearth-fire of peats, and held their little family councils upon what was to be done towards any chance—if chance remained—of yet giving aid to their parents; for a slender hope had sprung up that some hovel or sheepfold might have furnished them a screen (or, in Westmorland phrase, a *bield*) against the weather quarter of the storm, in which hovel they might even now be lying snowed up; and, secondly, as regarded themselves, in what way they were to make known their situation, in

case the snow should continue or should increase, for starvation stared them in the face if they should be confined for many days to their house.

Meantime, the eldest sister, little Agnes, though sadly alarmed, and feeling the sensation of *ecriness* as twilight came on and she looked out from the cottage-door to the dreadful fells on which, too probably, her parents were lying corpses (and possibly not many hundred yards from their own threshold), yet exerted herself to take all the measures which their own prospects made prudent. And she told Miss Wordsworth that, in the midst of the oppression on her little spirit from vague ghostly terrors, she did not fail, however, to draw some comfort from the consideration that the very same causes which produced their danger in one direction sheltered them from danger of another kind,—such dangers as she knew, from books that she had read, would have threatened a little desolate flock of children in other parts of England; for she considered thankfully that, if *they* could not get out into Grasmere, on the other hand bad men, and wild seafaring foreigners, who sometimes passed along the high road even in that vale, could not get to *them*; and that, as to their neighbours, so far from having anything to fear in that quarter, their greatest apprehension was lest they might not be able to acquaint them with their situation; but that, if this could be accomplished, the very sternest amongst them were kind-hearted people, that would contend with each other for the privilege of assisting them. Somewhat cheered with these thoughts, and having caused all her brothers

and sisters—except the two little things, not yet of a fit age—to kneel down and say the prayers which they had been taught, this admirable little maiden turned herself to every household task that could have proved useful to them in a long captivity. First of all, upon some recollection that the clock was nearly going down, she wound it up. Next, she took all the milk which remained from what her mother had provided for the children's consumption during her absence and for the breakfast of the following morning,—this luckily was still in sufficient plenty for two days' consumption (skimmed or "blue" milk being only one halfpenny a quart, and the quart a most redundant one, in Grasmere)—this she took and scalded, so as to save it from turning sour. That done, she next examined the meal chest; made the common oatmeal porridge of the country (the "burgoo" of the Royal Navy), but put all of the children, except the two youngest, on short allowance; and, by way of reconciling them in some measure to this stinted meal, she found out a little hoard of flour, part of which she baked for them upon the hearth into little cakes; and this unusual delicacy persuaded them to think that they had been celebrating a feast. Next, before night coming on should make it too trying to her own feelings, or before fresh snow coming on might make it impossible, she issued out of doors. There her first task was, with the assistance of two younger brothers, to carry in from the peat-stack as many peats as might serve them for a week's consumption. That done, in the second place she examined the potatoes,

buried in "brackens" (that is, with red fern): these were not many; and she thought it better to leave them where they were, excepting as many as would make a single meal, under a fear that the heat of their cottage would spoil them if removed.

Having thus made all the provision in her power for supporting their own lives, she turned her attention to the cow. Her she milked; but, unfortunately, the milk she gave either from being badly fed, or from some other cause, was too trifling to be of much consideration towards the wants of a large family. Here, however, her chief anxiety was to get down the hay for the cow's food from a loft above the outhouse; and in this she succeeded but imperfectly from want of strength and size to cope with the difficulties of the case,—besides that the increasing darkness by this time, together with the gloom of the place, made it a matter of great self-conquest for her to work at all; but as respected one night at any rate, she placed the cow in a situation of luxurious warmth and comfort. Then, retreating into the warm house, and "barring" the door, she sat down to undress the two youngest of the children; them she laid carefully and cosily in their little nests upstairs, and sang them to sleep. The rest she kept up to bear her company until the clock should tell them it was midnight; up to which time she had still a lingering hope that some welcome shout from the hills above, which they were all to strain their ears to catch, might yet assure them that they were not wholly orphans, even though one parent should have perished. No shout, it may be supposed was ever heard; nor

could a shout, in any case, *have* been heard, for the night was one of tumultuous wind. And, though amidst its ravings, sometimes they fancied a sound of voices, still, in the dead lulls that now and then succeeded, they heard nothing to confirm their hopes. As last services to what she might now have called her own little family, Agnes took precautions against the drifting of the snow *within* the door and *within* the imperfect window, which had caused them some discomfort on the preceding day; and, finally, she adopted the most systematic and elaborate plans for preventing the possibility of their fire being extinguished,—which, in the event of their being thrown upon the ultimate resource of their potatoes, would be absolutely indispensable to their existence, and in any case a main element of their comfort.

The night slipped away, and morning came, bringing with it no better hopes of any kind. Change there had been none but for the worse. The snow had greatly increased in quantity; and the drifts seemed far more formidable. A second day passed like the first,—little Agnes still keeping her young flock quiet, and tolerably comfortable, and still calling on all the elders in succession to say their prayers, morning and night.

A third day came; and, whether on that or on the fourth I do not now recollect, but on one or other, there came a welcome gleam of hope. The arrangement of the snow drifts had shifted during the night; and, though the wooden bridge was still impracticable, a low wall had been exposed, over which, by a circuit which evaded the brook, it seemed possible that a

road might be found into Grasmere. In some walls it was necessary to force gaps; but this was effected without much difficulty, even by children; for the Westmorland field walls are "open,"—that is, uncemented with mortar; and the push of a stick will generally detach so much from the upper part of any old crazy fence as to lower it sufficiently for female, or even for childish, steps to pass. The little boys accompanied their sister until she came to the other side of the hill; which, lying more sheltered from the weather, offered a path onwards comparatively easy. Here they parted; and little Agnes pursued her solitary mission to the nearest house she could find accessible in Grasmere.

No house could have proved a wrong one in such a case. Miss Wordsworth and I often heard the description renewed of the horror which, in an instant, displaced the smile of hospitable greeting, when little weeping Agnes told her sad tale. No tongue can express the fervid sympathy which travelled through the vale, like fire in an American forest, when it was learned that neither George nor Sarah Green had been seen by their children since the day of the Langdale sale. Within half an hour, or little more, from the remotest parts of the valley—some of them distant nearly two miles from the point of rendezvous—all the men of Grasmere had assembled at the little cluster of cottages called "Kirktown," from its adjacency to the venerable parish-church of St. Oswald. There were at the time I settled in Grasmere—*viz.*, in the spring of 1809, and, therefore, I suppose, in 1807-8, fifteen months previously—

about sixty-three households in the vale: and the total number of souls was about 265 to 270; so that the number of fighting men would be about sixty or sixty-six, according to the common way of computing the proportion; and the majority were athletic and powerfully built. Sixty, at least, after a short consultation as to the plan of operations, and for arranging the kind of signals by which they were to communicate from great distances, and in the perilous events of mists or snowstorms, set off with the speed of Alpine hunters to the hills. The dangers of the undertaking were considerable, under the uneasy and agitated state of the weather; and all the women of the vale were in the greatest anxiety until night brought them back, in a body, unsuccessful. Three days at the least, and I rather think five, the search was ineffectual: which arose partly from the great extent of the ground to be examined, and partly from the natural mistake made of ranging almost exclusively during the earlier days on that part of the hills over which the path of Easedale might be presumed to have been selected under any reasonable latitude of circuitousness. But the fact is, when the fatal accident (for such it has often proved) of a permanent mist surprises a man on the hills, if he turns and loses his direction, he is a lost man; and, without doing this so as to lose the power of *s'orienter*, all at once, it is yet well known how difficult it is to avoid losing it insensibly and by degrees. Baffling snow-showers are the worst kind of mists. And the poor Greens had, under that kind of confusion, wandered many a mile out of their proper track; so

that to search for them upon any line indicated by the ordinary probabilities would perhaps offer the slenderest chance for finding them.

The zeal of the people, meantime, was not in the least abated, but rather quickened, by the wearisome disappointments; every hour of daylight was turned to account, no man of the valley ever came home to meals: and the reply of a young shoemaker, on the fourth night's return, speaks sufficiently for the unabated spirit of the vale. Miss Wordsworth asked what he would do on the next morning. "Go up again, of course," was his answer. But what if to-morrow also should turn out like all the rest? "Why, go up in stronger force on the day after." Yet this man was sacrificing his own daily earnings without a chance of recompense. At length sagacious dogs were taken up; and, about noonday, a shout from an aerial height, amongst thick volumes of cloudy vapour, propagated through repeating bands of men from a distance of many miles, conveyed as by telegraph into Grasmere the news that the bodies were found. George Green was lying at the bottom of a precipice from which he had fallen. Sarah Green was found on the summit of the precipice; and, by laying together all the indications of what had passed, and reading into coherency the sad hieroglyphics of their last agonies, it was conjectured that the husband had desired his wife to pause for a few minutes, wrapping her, meantime, in his own greatcoat, whilst he should go forward and reconnoitre the ground, in order to catch a sight of some object (rocky peak, or tarn, or peatfield) which might

ascertain their real situation. Either the snow above, already lying in drifts, or the blinding snowstorms driving into his eyes, must have misled him as to the nature of the circumjacent ground; for the precipice over which he had fallen was but a few yards from the spot in which he had quitted his wife. The depth of the descent and the fury of the wind (almost always violent on these cloudy altitudes) would prevent any distinct communication between the dying husband below and his despairing wife above; but it was believed by the shepherds best acquainted with the ground, and the range of sound as regarded the capacities of the human ear under the probable circumstances of the storm, that Sarah might have caught, at intervals, the groans of her unhappy partner, supposing that his death were at all a lingering one. Others, on the contrary, supposed her to have gathered this catastrophe rather from the *want* of any sounds, and from his continued absence, than from any one distinct or positive expression of it; both because the smooth and unruffled surface of the snow where he lay seemed to argue that he had died without a struggle, perhaps without a groan, and because that tremendous sound of "hurtling" in the upper chambers of the air which often accompanies a snowstorm, when combined with heavy gales of wind, would utterly suppress and stifle (as they conceived) any sounds so feeble as those from a dying man. In any case, and by whatever sad language of sounds or signs, positive or negative, she might have learned or guessed her loss, it was generally agreed that the

wild shrieks heard towards midnight in Langdale-head announced the agonizing moment which brought to her now widowed heart the conviction of utter desolation and of final abandonment to her own solitary and fast-fleeting energies. It seemed probable that the *sudden* disappearance of her husband from her pursuing eyes would teach her to understand his fate, and that the consequent indefinite apprehension of instant death lying all around the point on which she sat had kept her stationary to the very attitude in which her husband left her until her failing powers, and the increasing bitterness of the cold to one no longer in motion, would soon make those changes of place impossible which too awfully had made themselves known as dangerous. The footsteps in some places, wherever drifting had not obliterated them, yet traceable as to the outline, though partially filled up with later falls of snow, satisfactorily showed that, however much they might have rambled, after crossing and doubling upon their own tracks, and many a mile astray from their right path, they must have kept together to the very plateau or shelf of rock at which (*i.e.*, on which, and *below* which) their wanderings had terminated; for there were evidently no steps from this plateau in the retrograde order.

By the time they had reached this final stage of their erroneous course, all possibility of escape must have been long over for both alike; because their exhaustion must have been excessive before they could have reached a point so remote and high; and, unfortunately, the direct result of all this exhaustion

had been to throw them farther off their home, or from "any dwelling-place of man," than they were at starting. Here, therefore, at this rocky pinnacle, hope was extinct for the wedded couple, but not perhaps for the husband. It was the impression of the vale that perhaps, within half-an-hour before reaching this fatal point, George Green might, had his conscience or his heart allowed him in so base a desertion, have saved himself singly, without any very great difficulty. It is to be hoped, however—and, for my part, I think too well of human nature to hesitate in believing—that not many, even amongst the meaner-minded and the least generous of men could have reconciled themselves to the abandonment of a poor fainting female companion in such circumstances. Still, though not more than a most imperative duty, it was such a duty as most of his associates believed to have cost him (perhaps consciously) his life. It is an impressive truth that sometimes in the very lowest forms of duty, less than which would rank a man as a villain, there is, nevertheless, the sublimest ascent of self-sacrifice. To do less would class you as an object of eternal scorn: to do so much presumes the grandeur of heroism. For his wife not only must have disabled him greatly by clinging to his arm for support; but it was known, from her peculiar character and manner, that she would be likely to rob him of his coolness and presence of mind, by too painfully fixing his thoughts, where her own would be busiest, upon their helpless little family. "*Stung* with the thoughts of home"—to borrow the fine expression of

Thomson in describing a similar case—alternately thinking of the blessedness of that warm fireside at Blentarn Ghyll which was not again to spread its genial glow through her freezing limbs, and of those darling little faces which, in this world, she was to see no more; unintentionally, and without being aware even of that result, she would rob the brave man (for such he was) of his fortitude, and the strong man of his *animal* resources. And yet (such, in the very opposite direction, was equally the impression universally through Grasmere), had Sarah Green foreseen, could her affectionate heart have guessed, even the tenth part of that love and neighbourly respect for herself which soon afterwards expressed themselves in showers of bounty to her children; could she have looked behind the curtain of destiny sufficiently to learn that the very desolation of these poor children which wrung her maternal heart, and doubtless constituted to her the sting of death, would prove the signal and the pledge of such anxious guardianship as not many rich men's children receive, and that this overflowing offering to her own memory would not be a hasty or decaying tribute of the first sorrowing sensibilities, but would pursue her children steadily until their hopeful settlement in life: anything approaching this, known or guessed, would have caused her (so said all who knew her) to welcome the bitter end by which such privileges were to be purchased, and solemnly to breathe out into the ear of that holy angel who gathers the whispers of dying mothers torn asunder from their infants a thankful *Nunc dimittis* (Lord, now lettest thou thy servant

depart in peace), as the farewell ejaculation rightfully belonging to the occasion.

The funeral of the ill-fated Greens was, it may be supposed, attended by all the Vale: it took place about eight days after they were found; and the day happened to be in the most perfect contrast to the sort of weather which prevailed at the time of their misfortune. Some snow still remained here and there upon the ground; but the azure of the sky was unstained by a cloud; and a golden sunlight seemed to sleep, so balmy and tranquil was the season, upon the very hills where the pair had wandered,—then a howling wilderness, but now a green pastoral lawn in its lower ranges, and a glittering expanse of virgin snow in its higher. George Green had, I believe, an elder family by a former wife; and it was for some of these children, who lived at a distance, and who wished to give their attendance at the grave, that the funeral was delayed. At this point, because really suggested by the contrast of the funeral tranquillity with the howling tempest of the fatal night, it may be proper to remind the reader of Wordsworth's memorial stanzas:—

“ Who weeps for strangers? Many wept  
For George and Sarah Green:  
Wept for that pair's unhappy fate  
Whose graves may here be seen.

“ By night upon these stormy fells  
Did wife and husband roam;  
Six little ones at home had left,  
And could not find that home.

" For *any* dwelling-place of man  
As vainly did they seek:  
*He* perished : and a voice was heard—  
The widow's lonely shriek.

" Not many steps, and she was left  
A body without life—  
A few short steps were the chain that bound  
The husband to the wife.

" *Now* do these sternly-featured hills  
Look gently on this grave;  
And quiet *now* are the depths of air,  
As a sea without a wave.

" But deeper lies the heart of peace,  
In quiet more profound;  
The heart of quietness is here  
Within this churchyard bound.

" And from all agony of mind  
It keeps them safe, and far  
From fear and grief, and from all need  
Of sun or guiding star.

" O darkness of the grave! how deep,  
After that living night—  
That last and dreary living one  
Of sorrow and affright!

" O sacred marriage-bed of death!  
That keeps them side by side  
In bond of peace, in bond of love,  
That may not be untied."

Thomas De Quincey.

---

## A LARK'S FLIGHT

Rightly or wrongly, during the last twenty or thirty years a strong feeling has grown up in the public mind against the principle, and a still stronger feeling against the practice, of capital punishments. Many people who will admit that the execution of the murderer may be, abstractly considered, just enough, sincerely doubt whether such execution be expedient, and are in their own minds perfectly certain that it cannot fail to demoralise the spectators. In consequence of this, executions have become rare; and it is quite clear that many scoundrels, well worthy of the noose, contrive to escape it. When, on the occasion of a wretch being turned off, the spectators are few, it is remarked by the newspapers that the mob is beginning to lose its proverbial cruelty, and to be stirred by humane pulses; when they are numerous, and especially when girls and women form a majority, the circumstance is noticed and deplored. It is plain enough that, if the newspaper considered such an exhibition beneficial, it would not lament over a few thousand eager witnesses: if the sermon be edifying, you cannot have too large a congregation; if you teach a moral lesson in a grand, impressive way, it is difficult to see how you can have too many pupils. Of course, neither the justice nor the expediency of capital punishments

falls to be discussed here. This, however, may be said, that the popular feeling against them may not be so admirable a proof of enlightenment as many believe. It is true that the spectacle is painful, horrible; but in pain and horror there is often hidden a certain salutariness, and the repulsion of which we are conscious is as likely to arise from debilitation of public nerve, as from a higher reach of public feeling. To my own thinking, it is out of this pain and hatefulness that an execution becomes invested with an ideal grandeur. It is sheer horror to all concerned—sheriffs, halbertmen, chaplain, spectators, Jack Ketch, and culprit; but out of all this, and towering behind the vulgar and hideous accessories of the scaffold, gleams the majesty of implacable law. When every other fine morning a dozen cut-purses were hanged at Tyburn, and when such sights did not run very strongly against the popular current, the spectacle *was* vulgar, and could be of use only to the possible cut-purses congregated around the foot of the scaffold. Now, when the law has become so far merciful; when the punishment of death is reserved for the murderer; when he can be condemned only on the clearest evidence; when, as the days draw slowly on to doom, the frightful event impending over one stricken wretch throws its shadow over the heart of every man, woman, and child in the great city; and when the official persons whose duty it is to see the letter of the law carried out perform that duty at the expense of personal pain, a public execution is not vulgar, it becomes positively sublime. It is dreadful, of course; but its dreadfulness melts into

pure awfulness. The attention is taken off the criminal, and is lost in a sense of the grandeur of justice; and the spectator who beholds an execution, solely as it appears to the eye, without recognition of the idea which towers behind it, must be a very unspiritual and unimaginative spectator indeed.

It is taken for granted that the spectators of public executions—the artisans and country people who take up their stations over-night as close to the barriers as possible, and the wealthier classes who occupy hired windows and employ opera-glasses—are merely drawn together by a morbid relish for horrible sights. He is a bold man who will stand forward as the advocate of such persons—so completely is the popular mind made up as to their tastes and motives. It is not disputed that the large body of the mob, and of the occupants of windows, have been drawn together by an appetite for excitement; but it is quite possible that many come there from an impulse altogether different. Just consider the nature of the expected sight—a man in tolerable health probably, in possession of all his faculties, perfectly able to realise his position, conscious that for him this world and the next are so near that only a few seconds divide them—such a man stands in the seeing of several thousand eyes. He is so peculiarly circumstanced, so utterly lonely—, hearing the tolling of his own death-bell, yet living, wearing the mourning clothes for his own funeral—that he holds the multitude together by a shuddering fascination. The sight is a peculiar one, you must admit, and every peculiarity has its attractions.

Your volcano is more attractive than your ordinary mountain. Then consider the unappeasable curiosity as to death which haunts every human being, and how pathetic that curiosity is, in so far as it suggests our own ignorance and helplessness, and we see at once that people *may* flock to public executions for other purposes than the gratification of morbid tastes: that they would pluck if they could some little knowledge of what death is; that imaginatively they attempt to reach to it, to touch and handle it through an experience which is not their own. It is some obscure desire of this kind, a movement of curiosity not altogether ignoble, but in some degree pathetic; some rude attempt of the imagination to wrest from the death of the criminal information as to the great secret in which each is profoundly interested, which draws around the scaffold people from the country harvest-fields, and from the streets and alleys of the town. Nothing interests men so much as death. Age cannot wither it, nor custom stale it. 'A greater crowd would come to see me hanged,' Cromwell is reported to have said when the populace came forth on a public occasion. The Lord Protector was right in a sense of which, perhaps, at the moment he was not aware. Death is greater than official position. When a man has to die, he may safely dispense with stars and ribbands. He is invested with a greater dignity than is held in the gift of kings. A greater crowd *would* have gathered to see Cromwell hanged, but the compliment would have been paid to death rather than to Cromwell. Never were the motions of Charles I so scrutinised as when

he stood for a few moments on the scaffold that winter morning at Whitehall. King Louis was no great orator usually, but when on January 2, 1793, he attempted to speak a few words in the Place de la Revolution, it was found necessary to drown his voice in a harsh roll of soldiers' drums. Not without a meaning do people come forth to see men die. We stand in the valley, they on the hilltop, and on their faces strikes the light of the other world, and from some sign or signal of theirs we attempt to discover or extract a hint of what it is all like.

To be publicly put to death, for whatever reason, must ever be a serious matter. It is always bitter, but there are degrees in its bitterness. It is easy to die like Stephen with an opened heaven above you, crowded with angel faces. It is easy to die like Belmerino with a chivalrous sigh for the White Rose, and an audible 'God bless King James.' Such men die for a cause in which they glory, and are supported thereby; they are conducted to the portals of the next world by the angels, Faith, Pity, Admiration. But it is not easy to die in expiation of a crime like murder, which engirdles you with trembling and horror even in the loneliest places, which cuts you off from the sympathies of your kind, which reduces the universe to two elements—a sense of personal identity, and a memory of guilt. In so dying, there must be inconceivable bitterness; a man can have no other support than what strength he may pluck from despair, or from the iron with which nature may have originally braced heart and nerve. Yet, taken as a whole, criminals on the scaffold

comport themselves creditably. They look Death in the face when he wears his cruellest aspect, and if they flinch somewhat, they can at least bear to look. I believe that, for the criminal, execution within the prison walls, with no witnesses save some half-dozen official persons, would be infinitely more terrible than execution in the presence of a curious, glaring mob. The daylight and the publicity are alien elements, which wean the man a little from himself. He steadies his dizzy brain on the crowd beneath and around him. He has his last part to play, and his manhood rallies to play it well. Nay, so subtly is vanity intertwined with our motives, the noblest and the most ignoble, that I can fancy a poor wretch with the noose dangling at his ear, and with barely five minutes to live, soothed somewhat with the idea that his firmness and composure will earn him the approbation, perhaps the pity, of the spectators. He would take with him, if he could, the good opinion of his fellows. This composure of criminals puzzles one. Have they looked at death so long and closely, that familiarity has robbed it of terror? Has life treated them so harshly, that they are tolerably well pleased to be quit of it on any terms? Or is the whole thing mere blind stupor and delirium, in which thought is paralysed, and the man an automaton? Speculation is useless. The fact remains that criminals for the most part die well and bravely. It is said that the championship of England was to be decided at some little distance from London on the morning of the day on which Thurtell was executed, and that, when he came out

on the scaffold, he inquired privily of the executioner if the result had yet become known. Jack Ketch was not aware, and Thurtell expressed his regret that the ceremony in which he was chief actor should take place so inconveniently early in the day. Think of a poor Thurtell forced to take his long journey an hour, perhaps, before the arrival of intelligence so important!

More than twenty years ago I saw two men executed, and the impression then made remains fresh to this day. For this there were many reasons. The deed for which the men suffered created an immense sensation. They were hanged on the spot where the murder was committed—on a rising ground, some four miles north-east of the city; and as an attempt at rescue was apprehended, there was a considerable display of military force on the occasion. And when, in the dead silence of thousands, the criminals stood beneath the halters; an incident occurred, quite natural and slight in itself, but when taken in connexion with the business then proceeding, so unutterably tragic, so overwhelming in its pathetic suggestion of contrast, that the feeling of it has never departed, and never will. At the time, too, I speak of, I was very young; the world was like a die newly cut, whose every impression is fresh and vivid.

While the railway which connects two northern capitals was being built, two brothers from Ireland, named Doolan, were engaged upon it in the capacity of navvies. For some fault or negligence, one of the brothers was dismissed by the overseer—a Mr.

Green—of that particular portion of the line on which they were employed. The dismissed brother went off in search of work, and the brother who remained—Dennis was the Christian name of him—brooded over this supposed wrong, and in his dull, twilighted brain revolved projects of vengeance. He did not absolutely mean to take Green's life, but he meant to thrash him to within an inch of it. Dennis, anxious to thrash Green, but not quite seeing his way to it, opened his mind one afternoon, when work was over, to his friends—fellow-Irishmen, and navvies—Messrs. Redding and Hickie. These took up Doolan's wrong as their own, and that evening, by the dull light of a bothy fire, they held a rude parliament, discussing ways and means of revenge. It was arranged that Green should be thrashed—the amount of thrashing left an open question, to be decided, unhappily, when the blood was up and the cinder of rage blown into a flame. Hickie's spirit was found not to be a mounting one, and it was arranged that the active partners in the game should be Doolan and Redding. Doolan, as the aggrieved party, was to strike the first blow, and Redding, as the aggrieved party's particular friend asked and obtained permission to strike the second. The main conspirators, with a fine regard for the feelings of the weaker Hickie, allowed him to provide the weapons of assault—so that by some slight filament of aid he might connect himself with the good cause. The unambitious Hickie at once applied himself to his duty. He went out, and in due time returned with two sufficient iron pokers. The weapons were:

examined, approved of, and carefully laid aside. Doolan, Redding, and Hickie ate their suppers, and retired to their several couches to sleep, peacefully enough no doubt. About the same time, too, Green, the English overseer, threw down his weary limbs, and entered on his last sleep—little dreaming what the morning had in store for him.

Uprose the sun, and uprose Doolan and Redding and dressed, and thrust each his sufficient iron poker up the sleeve of his blouse, and went forth. They took up their station on a temporary wooden bridge which spanned the line, and waited there. Across the bridge, as was expected, did Green ultimately come. He gave them good morning; asked, 'why they were loafing about?' received no very pertinent answer, perhaps did not care to receive one; whistled—the unsuspecting man!—thrust his hands into his breeches pockets, turned his back on them, and leaned over the railing of the bridge, inspecting the progress of the works beneath. The temptation was really too great. What could wild Irish flesh and blood do? In a moment out from the sleeve of Doolan's blouse came the hidden poker, and the first blow was struck, bringing Green to the ground. The friendly Redding, who had bargained for the second, and who, naturally enough, was in fear of being cut out altogether, jumped on the prostrate man, and fulfilled his share of the bargain with a will. It was Redding it was supposed who sped the unhappy Green. They overdid their work—like young authors—giving many more blows than were sufficient, and then fled. The works, of course, were

that morning in consternation. Redding and Hickie were, if I remember rightly, apprehended in the course of the day. Doolan got off, leaving no trace of his whereabouts.

These particulars were all learned subsequently. The first intimation which we schoolboys received of anything unusual having occurred, was the sight of a detachment of soldiers with fixed bayonets, trousers rolled up over muddy boots, marching past the front of the Cathedral hurriedly home to barracks. This was a circumstance somewhat unusual. We had, of course, frequently seen a couple of soldiers trudging along with sloped muskets, and that cruel glitter of steel which no one of us could look upon quite unmoved; but in such cases, the deserter walking between them in his shirt-sleeves, his pinioned hands covered from public gaze by the loose folds of his great-coat, explained everything. But from the hurried march of these mud-splashed men nothing could be gathered, and we were left to speculate upon its meaning. Gradually, however, before the evening fell, the rumour of a murder having been committed spread through the city, and with that I instinctively connected the apparition of the file of muddy soldiers. Next day, murder was in every mouth. My schoolfellows talked of it to the detriment of their lessons; it flavoured the tobacco of the fustian artisan as he smoked to work after breakfast; it walked on 'Change amongst the merchants. It was known that two of the persons implicated had been captured, but that the other, and guiltiest, was still at large; and in a few days out

on every piece of boarding and blank wall came the 'Hue and cry'—describing Doolan like a photograph, to the colour and cut of his whiskers, and offering £100 as reward for his apprehension, or for such information as would lead to his apprehension—like a silent, implacable bloodhound following close on the track of the murderer. This terrible broad-sheet I read, was certain that *he* had read it also, and fancy ran riot over the ghastly fact. For him no hope, no rest, no peace, no touch of hands gentler than the hangman's; all the world is after him like a roaring prairie of flame! I thought of Doolan, weary, foot-sore, heart-sore, entering some quiet village of an evening; and to quench his thirst, going up to the public well, around which the gossips are talking, and hearing that they were talking of *him*; and seeing from the well itself, it glaring upon him, as if conscious of his presence, with a hundred eyes of vengeance. I thought of him asleep in out-houses, and starting up in wild dreams of the policeman's hand upon his shoulder fifty times ere morning. He had committed the crime of Cain, and the weird of Cain he had to endure. But yesterday innocent, how unimportant; to-day bloody-handed, the whole world is talking of him, and everything he touches, the very bed he sleeps on, steals from him his secret, and is eager to betray!

Doolan was finally captured in Liverpool, and in the Spring Assize the three men were brought to trial. The jury found them guilty, but recommended Hickie to mercy on account of some supposed weakness of mind on his part. Sentence was, of course,

pronounced with the usual solemnities. They were set apart to die; and when snug abed o' nights—for imagination is most mightily moved by contrast—I crept into their desolate hearts, and tasted a misery which was not my own. As already said, Hickie was recommended to mercy, and the recommendation was ultimately in the proper quarter given effect to.

The evening before the execution has arrived, and the reader has now to imagine the early May sunset falling pleasantly on the outskirts of the city. The houses looking out upon an open square or space, have little plots of garden-ground in their fronts, in which mahogany-coloured wall-flowers and mealy auriculas are growing. The side of this square, along which the City Road stretches northward, is occupied by a blind asylum, a brick building, the bricks painted red and picked out with white, after the tidy English fashion, and a high white cemetery wall, over which peers the spire of the Gothic Cathedral; and beyond that, on the other side of the ravine, rising out of a populous city of the dead, a stone John Knox looks down on the Cathedral, a Bible clutched in his outstretched and menacing hand. On all this the May sunset is striking, dressing everything in its warm, pleasant pink, lingering in the tufts of foliage that nestle around the asylum, and dipping the building itself one half in light, one half in tender shade. This open space or square is an excellent place for the games of us boys, and 'Prisoners' Base' is being carried out with as much earnestness as the business of life now by

those of us who are left. The girls, too, have their games of a quiet kind, which we hold in huge scorn and contempt. In two files, linked arm-in-arm, they alternately dance towards each other and then retire, singing the while, in their clear, girlish treble, verses; the meaning and pertinence of which time has worn away—

The Campsie Duke's a-riding, a-riding, a-riding,

being the oft-recurring 'overcome' or refrain. All this is going on in the pleasant sunset light, when by the apparition of certain waggons coming up from the city, piled high with blocks and beams, and guarded by a dozen dragoons, on whose brazen helmets the sunset danced, every game is dismembered, and we are in a moment a mere mixed mob of boys and girls, flocking around to stare and wonder. Just at this place something went wrong with one of the waggon wheels, and the procession came to a stop. A crowd collected, and we heard some of the grown-up people say that the scaffold was being carried out for the ceremony of to-morrow. Then, more intensely than ever, one realised the condition of the doomed men. *We* were at our happy games in the sunset, *they* were entering on their last night on earth. After hammering and delay the wheel was put to rights, the sunset died out, waggons and dragoons got into motion and disappeared; and all the night through, whether awake or asleep, I saw the torches burning, and heard the hammers clinking, and witnessed as clearly as if I had been an onlooker, the horrid structure rising,

till it stood complete, with a huge cross-beam from which two empty halters hung, in the early morning light.

Next morning the whole city was in commotion. Whether the authorities were apprehensive that a rescue would be attempted, or were anxious merely to strike terror into the hundreds of wild Irishry engaged on the railway, I cannot say; in any case, there was a display of military force quite unusual. The carriage in which the criminals—Catholics both—and their attendant priests were seated, was guarded by soldiers with fixed bayonets; indeed, the whole regiment then lying in the city was massed in front and behind, with a cold, frightful glitter of steel. Besides the foot soldiers, there were dragoons, and two pieces of cannon; a whole little army, in fact. With a slenderer force battles have been won which have made a mark in history. What did the prisoners think of their strange importance, and of the tramp and hurly-burly all around? When the procession moved out of the city, it seemed to draw with it almost the entire population; and when once the country roads were reached, the crowd spread over the fields on either side, ruthlessly treading down the tender wheat braid. I got a glimpse of the doomed, blanched faces which had haunted me so long, at the turn of the road, where, for the first time, the black cross-beam with its empty halters first became visible to them. Both turned and regarded it with a long, steady look; that done, they again bent their heads attentively to the words of the clergyman. I suppose in that long, eager, fascinated

gaze they practically *died*—that for them death had no additional bitterness. When the mound was reached on which the scaffold stood, there was immense confusion. Around it a wide space was kept clear by the military; the cannon were placed in position; out flashed the swords of the dragoons; beneath and around on every side was the crowd. Between two brass helmets I could see the scaffold clearly enough, and when in a little while the men, bareheaded and with their attendants, appeared upon it, the surging crowd became stiffened with fear and awe. And now it was that the incident so simple, so natural, so much in the ordinary course of things, and yet so frightful in its tragic suggestions, took place. Be it remembered that the season was early May, that the day was fine, that the wheat-fields were clothing themselves in the green of the young crop, and that around the scaffold, standing on a sunny mound, a wide space was kept clear. When the men appeared beneath the beam, each under his proper halter, there was a dead silence—every one was gazing too intently to whisper to his neighbour even. Just then, out of the grassy space at the foot of the scaffold, in the dead silence audible to all, a lark rose from the side of its nest, and went singing upward in its happy flight. O heaven! how did that song translate itself into dying ears? Did it bring in one wild burning moment father, and mother, and poor Irish cabin, and prayers said at bed-time, and the smell of turf fires, and innocent sweethearting, and rising and setting suns? Did it—but the dragoon's horse has become restive, and his brass helmet bobs

up and down and blots everything; and there is a sharp sound, and I feel the great crowd heave and swing, and hear it torn by a sharp shiver of pity, and the men whom I saw so near but a moment ago are at immeasurable distance, and have solved the great enigma—and the lark has not yet finished his flight: you can see and hear him yonder in the fringe of a white May cloud.

This ghastly lark's flight, when the circumstances are taken into consideration, is, I am inclined to think, more terrible than anything of the same kind which I have encountered in books. The artist's uses of contrast as background and accompaniment, are well known to nature and the poets. Joy is continually worked on sorrow, sorrow on joy; riot is framed in peace, peace in riot. Lear and the Fool always go together. Trafalgar is being fought while Napoleon is sitting on horseback watching the Austrian army laying down its arms at Ulm. In Hood's poem, it is when looking on the released schoolboys at their games that Eugene Aram remembers he is a murderer. And these two poor Irish labourers could not die without hearing a lark singing in their ears. It is Nature's fashion. She never quite goes along with us. She is sombre at weddings, sunny at funerals, and she frowns on ninety-nine out of a hundred picnics.

There is a stronger element of terror in this incident of the lark than in any story of a similar kind I can remember.

A good story is told of an Irish gentleman—still known in London society—who inherited the family estates and the family banshee. The estates he lost

—no uncommon circumstance in the history of Irish gentlemen,—but the banshee, who expected no favours, stuck to him in his adversity, and crossed the channel with him, making herself known only on occasions of deathbeds and sharp family misfortunes. This gentleman had an ear, and, seated one night at the opera, the *keen*—heard once or twice before on memorable occasions—thrilled through the din of the orchestra and the passion of the singers. He hurried home of course, found his immediate family well, but on the morrow a telegram arrived with the announcement of a brother's death. Surely of all superstitions that is the most imposing which makes the other world interested in the events which befall our mortal lot. For the mere pomp and pride of it, your ghost is worth a dozen retainers, and it is entirely inexpensive. The peculiarity and super-natural worth of this story lies in the idea of the old wail piercing through the sweet entanglement of stringed instruments and extinguishing Grisi. Modern circumstances and luxury crack, as it were, and reveal for a moment misty and aboriginal time big with portent. There is a ridiculous Scotch story in which one gruesome touch lives. A clergyman's female servant was seated in the kitchen one Saturday night reading the Scriptures, when she was somewhat startled by hearing at the door the tap and voice of her sweetheart. Not expecting him, and the hour being somewhat late, she opened it in astonishment, and was still more astonished to hear him on entering abuse Scripture-reading. He behaved altogether in an unprecedented manner, and in many ways terrified

the poor girl. Ultimately he knelt before her, and laid his head on her lap. You can fancy her consternation when glancing down she discovered that, *instead of hair, the head was covered with the moss of the moorland.* By a sacred name she adjured him to tell who he was, and in a moment the figure was gone. It was the Fiend, of course—diminished sadly since Milton saw him bridge chaos—fallen from worlds to kitchen-wench. But just think how in the story, in half-pity, in half-terror, the popular feeling of homelessness, of being outcast, of being unsheltered as waste and desert places, has incarnated itself in that strange covering of the head. It is a true supernatural touch. One other story I have heard in the misty Hebrides: A Skye gentleman was riding along an empty moorland road. All at once, as if it had sprung from the ground, the empty road was crowded by a funeral procession. Instinctively he drew his horse to a side to let it pass, which it did without sound of voice, without tread of foot. Then he knew it was an apparition. Staring on it, he knew every person who either bore the corpse or who walked behind as mourners. There were the neighbouring proprietors at whose houses he dined, there were the members of his own kirk-session, there were the men to whom he was wont to give good-morning when he met them on the road or at market. Unable to discover his own image in the throng, he was inwardly marvelling whose funeral it *could* be, when the troop of spectres vanished, and the road was empty as before. Then, remembering that the coffin had an invisible occupant, he cried out, 'It is my funeral!'

and, with all his strength taken out of him, rode home to die. All these stories have their own touches of terror; yet I am inclined to think that my lark rising from the scaffold foot, and singing to two such auditors, is more terrible than any one of them.

*Alexander Smith.*

## THE JAM SAHIB OF NAWANAGAR

The last ball has been bowled, the bats have been oiled and put away, and around Lord's the grand stands are deserted and forlorn. We have said farewell to cricket. We have said farewell, too, to cricket's king. The game will come again with the spring and the new grass and the burgeoning trees. But the king will come no more. For the Jam Sahib is forty, and, alas, the Jam Sahib is fat. And the temple bells are calling him back to his princely duties amid the sunshine, and the palm trees, and spicy garlic smells of Nawanagar. No more shall we see him tripping down the pavilion steps, his face wreathed in chubby smiles; no more shall we sit in the jolly sunshine through the livelong day and watch his incomparable art till the evening shadows fall athwart the greensward and send us home content. The well-graced actor leaves the stage and becomes only a memory in a world of happy memories. And so "hats off" to the Jam Sahib—the prince of a little State, but the king of a great game.

There have been kings before him to whom we have joyfully bowed the knee. There was he of the great black beard who first captured our idolatry in the far-off days when the Three Graces arose in the West.

What a Vulcan the man looked ! What a genius he had for the game ! " I put the ball where I like," said Carpenter after bowling to him, "and then he—well, he puts it where *he* likes." And F. R. Spofforth—who can forget those thrilling days in the 'seventies when he came like a scourge from afar and swept British cricket before him ? What a revelation he was of pace and passion. How stealthy his approach, how astonishing his leap into the air, how terrific the bolt he sped ! And Lohmann of the many gifts, so easy, so various, so fresh and original. And Johnny Briggs, that incomparable comedian. What duels of cunning and resource have we seen between him and Abel in the old days at the Oval. And A. G. Steel—do you remember that 148 against Australia at Lord's in the early 'eighties ? Grace had failed, and Lucas had failed and the day was dark for England. Then, supported by dour Richard Barlow, Steel slowly retrieved the game, broke the bowling, captured it, smote it. Thrice in succession he drove—was it not the great George Giffen himself ?—into the crowd, and with each stroke the temperature rose higher, and the ring was a vision of waving hats and handkerchiefs, and the sound was like the breaking of a great sea on a ringing shore. I think we must have been more intense in those days. Perhaps it is that we were younger.

Yes, there were giants before the Jam Sahib. And yet I think it is undeniable that as a batsman the Indian will live as the supreme exponent of the Englishman's game. The claim does not rest simply on his achievements, although, judged by them, the claim could be sustained. His season's average of 87

with a total of over 3,000 runs, is easily the high-water mark of English cricket. Thrice he has totalled over 3,000 runs, and no one else has equalled that record. And is not his the astonishing achievement of scoring two double centuries in a single match on a single day—not against a feeble attack, but against Yorkshire, always the most resolute and resourceful of bowling teams?

But we do not judge a cricketer so much by the runs he gets as by the way he gets them. "In literature as in finance," says Washington Irving, "much paper and much poverty may co-exist." And in cricket, too, many runs and much dullness may be associated. If cricket is menaced with creeping paralysis, it is because it is losing the spirit of joyous adventure and becoming a mere instrument for compiling tables of averages. There are dull, mechanic fellows who turn out runs with as little emotion as a machine turns out pins. To watch them playing is as deadly an infliction as it was to see Peall making his interminable breaks with the spot-stroke. There is no colour, no enthusiasm, no character in their play. Cricket is not an adventure to them; it is a business. It was so with Shrewsbury. His technical perfection was astonishing; but the soul of the game was wanting in him. There was no sunshine in his play, no swift surprise or splendid unselfishness. And without these things, without gaiety, daring, and the spirit of sacrifice cricket is a dead thing. Now, the Jam Sahib has the root of the matter in him. His play is as sunny as his face. He is not a miser hoarding up runs, but a millionaire spending them, with a splendid yet judicious

prodigality. It is as though his pockets are bursting with runs that he wants to shower with his blessings upon the expectant multitude. It is not difficult to believe that in his little kingdom of Nawanagar, where he has the power of life and death in his hands, he is extremely popular, for it is obvious that his pleasure is in giving pleasure.

In the quality of his play he is unlike anything that has been seen on the cricket field, certainly in our time. There is extraordinarily little display in his methods. He combines an Oriental calm with an Oriental swiftness—the stillness of the panther with the suddenness of its spring. He has none of the fine flourishes of our own stylists, but a quite startling economy of action. The normal batsman, obeying a natural impulse, gets into motion as the bowler starts his run. He keeps pace as it were with his foe, and his movements are a crescendo culminating in a crisis. At the end of the stroke the bat has described a circle, the feet are displaced, the original attitude has been lost in a whirl of motion. It may be an ordered whirl, conventional and academic as in the case of Hayward, who has all the correctness, monotony, and efficiency of a book of rules, and like a book of rules sends one to sleep. Or it may be a whirl of fine frenzy like that of John Tyldesley, who is a glorious empiric, and who plays as though he had never heard of a rule, but meets every situation with a swift and dazzling inspiration.\* But in either case the whirl of bat and batsman is unfailing. The style of the Jam Sahib is entirely different. He stands moveless as the bowler approaches the wicket. He remains moveless as the

ball is delivered. It seems to be on him before he takes action. Then, without any preliminary flourish, the bat flashes to the ball, and the stroke is over. The body seems never to have changed its position, the feet apparently unmoved, the bat is as before. Nothing has happened except that one sudden flash—swift, perfectly timed, indisputable

“ Like the lightning, which doth cease to be  
Ere one can say it lightens.”

If the supreme art is to achieve the maximum result with the minimum expenditure of effort, the Jam Sahib, as a batsman, is in a class by himself. We have no one to challenge with our coarser methods that curious refinement of style, which seems to have reduced action to its barest terms. It is the art of the great etcher who with a line reveals infinity. It is the art of the great dramatist who with a significant word shakes the soul. Schiller, said Coleridge, burns a city to create his effect of terror; Shakespeare drops a handkerchief and freezes our blood. The typical batsman performs a series of intricate evolutions in playing the ball; the Jam Sahib flicks his wrist and the ball bounds to the ropes. It is not jugglery, or magic: it is simply the perfect economy of means to an end. His batting may be compared with the oratory of Mr. Asquith, who exercises the same thrift in the use of words as the Jam Sahib exercises in the use of action, and achieves the same completeness of effect. The Jam never uses an action too much; Mr. Asquith never uses a word too many. Each is a model in that fine art of omission of unessentials,

that concentration on the one thing that needs to be said or done.

It follows that in all sports in which success depends upon truth of eye and swiftness of action the Jam Sahib has won distinction. At lawn tennis he has in his time beaten Renshaw, and as a shot he takes rank among the most instant and deadly of his time.

Probably no cricketer has ever won so peculiar a place in the affections of the people. They loved him from the first for the novelty of the thing. It was as though a pet kitten had begun to talk Tariff Reform. Here was what the late Lord Salisbury would have called "a black man" playing cricket for all the world as if he were a white man. Then they realised that he did not play it as a white man, but as an artist of another and a superior strain. And so they came to reflect, and to catch through this solitary figure in our midst some vision of that vast realm which we govern without knowing anything about it. It is the Jam Sahib's supreme service that, through his genius for the English game, he has familiarised the English people with the idea of the Indian as a man of like affections with ourselves, and with capacities beyond ours in directions supposed to be peculiarly our own. In a word, he is the first Indian who has touched the imagination of our people. He has released trains of thought in the common mind that cannot fail to influence beneficially the popular feeling in regard to the greatest task that belongs to us as a nation.

And if India had sought to make herself heard and understood by the people who control her from afar, she could not have found a more triumphant

missionary than the Jam Sahib, with his smile and his bat. Great Indians come to us frequently, men of high scholarship, rare powers of speech, noble character—the Gokhales, the Bannerjees, the Tagores. They come and they go, unseen and unheard by the multitude. The Jam Sahib has brought the East into the heart of our happy holiday crowds, and has taught them to think of it as something human and kindly, and keenly responsive to the joys that appeal to us. In the narrower circle of those who know him his influence has not been less fruitful. He is as engaging with his tongue as with his bat, a lively raconteur, and a man of thoroughly democratic sympathies and serious purposes. It was he who first set himself to break down the practice of professionals and amateurs lunching separately, providing thus a curious commentary on our vague conceptions about caste. The castes of India have at least some basis in great traditions and fundamental ideas. The caste system of our own cricket field as of our own society has only a basis in riches. You cannot be a Runjeet-Singh—to give the Jam Sahib the true rendering of his much-abused name—unless you had the blood of the Lion race in your veins, but you may join the old nobility of England if you have made a brilliant speculation in rubber, or have exploited the oils of Baku or the gold of the Transvaal. Perhaps, after all, the Jam Sahib has more right to correct the caste traditions of our land than we have to deplore the caste system of his own.

He goes back to his own people—to the little State that he recovered so romantically, and governs

as a good Liberal should govern—and the holiday crowds will see him no more. But his name will live in the hearts of hundreds of thousands of British people, to whom he has given happy days and happy memories.

*Alfred George Gardiner.*

## HISTORICAL NARRATIVES

### THE IMPEACHMENT OF WARREN HASTINGS

When it was announced that Hastings was about to quit his office, the feeling of the society which he had so long governed manifested itself by many signs. Addresses poured in from Europeans and Asiatics, from civil functionaries, soldiers, and traders. On the day on which he delivered up the keys of office, a crowd of friends and admirers formed a lane to the quay where he embarked. Several barges escorted him far down the river; and some attached friends refused to quit him till the low coast of Bengal was fading from the view, and till the pilot was leaving the ship.

The voyage was, for those times, very speedy, Hastings was little more than four months on the sea. In June, 1785, he landed at Plymouth, posted to London, appeared at Court, paid his respects in Leadenhall Street, and then retired with his wife to Cheltenham.

He was greatly pleased with his reception. The King treated him with marked distinction. The Queen, who had already incurred much censure on account of the favour which, in spite of the ordinary severity of her virtue, she had shown to the 'elegant Marian,' was not less gracious to Hastings. The

Directors received him in a solemn sitting; and their chairman read to him a vote of thanks which they had passed without one dissentient voice. 'I find myself,' said Hastings, in a letter written about a quarter of a year after his arrival in England, 'I find myself everywhere, and universally, treated with evidences, apparent even to my own observation, that I possess the good opinion of my country.'

The confident and exulting tone of his correspondence about this time is the more remarkable, because he had already received ample notice of the attack which was in preparation. Within a week after he landed at Plymouth, Burke gave notice in the House of Commons of a motion seriously affecting a gentleman lately returned from India. The session, however, was then so far advanced, that it was impossible to enter on so extensive and important a subject.

Hastings, it is clear, was not sensible of the danger of his position. Indeed that sagacity, that judgment, that readiness in devising expedients, which had distinguished him in the East, seemed now to have forsaken him; not that his abilities were at all impaired; not that he was not still the same man who had triumphed over Francis and Nuncomar, who had made the Chief Justice and the Nabob Vizier his tools, who had deposed Cheyte Sing, and repelled Hyder Ali. But an oak, as Mr. Grattan finely said, should not be transplanted at fifty. A man who, having left England when a boy, returns to it after thirty or forty years passed in India, will find, be his

talents what they may, that he has much both to learn and to unlearn before he can take a place among English statesmen. The working of a representative system, the war of parties, the arts of debate, the influence of the Press, are startling novelties to him. Surrounded on every side by new machines and new tactics, he is as much bewildered as Hannibal would have been at Waterloo, or Themistocles at Trafalgar. His very acuteness deludes him. His very vigour causes him to stumble. The more correct his maxims, when applied to the state of society to which he is accustomed, the more certain they are to lead him astray. This was strikingly the case with Hastings. In India he had a bad hand; but he was master of the game, and he won every stake. In England he held excellent cards, if he had known how to play them; and it was chiefly by his own errors that he was brought to the verge of ruin.

Of all his errors the most serious was perhaps the choice of a champion. Clive, in similar circumstances, had made a singularly happy selection. He put himself into the hands of Wedderburn, afterwards Lord Loughborough, one of the few great advocates who have also been great in the House of Commons. To the defence of Clive, therefore, nothing was wanting, neither learning nor knowledge of the world, neither forensic acuteness nor that eloquence which charms political assemblies. Hastings entrusted his interests to a very different person, a Major in the Bengal army, named Scott. This gentleman had been sent over from India some time before as the agent of the Governor-General. It was rumoured

that his services were rewarded with Oriental munificence; and we believe that he received much more than Hastings could conveniently spare. The Major obtained a seat in Parliament, and was there regarded as the organ of his employer. It was evidently impossible that a gentleman so situated could speak with the authority which belongs to an independent position. Nor had the agent of Hastings the talents necessary for obtaining the ear of an assembly which, accustomed to listen to great orators, had naturally become fastidious. He was always on his legs; he was very tedious; and he had only one topic, the merits and wrongs of Hastings. Everybody who knows the House of Commons will easily guess what followed. The Major was soon considered as the greatest bore of his time. His exertions were not confined to Parliament. There was hardly a day on which the newspapers did not contain some puff upon Hastings, signed *Asiaticus* or *Bengalensis*, but known to be written by the indefatigable Scott; and hardly a month in which some bulky pamphlet on the same subject, and from the same pen, did not pass to the trunkmakers and the pastrycooks. As to this gentleman's capacity for conducting a delicate question through Parliament, our readers will want no evidence beyond that which they will find in letters preserved in the three volumes of Mr. Gleig's *Memoirs*. We will give a single specimen of his temper and judgment. He designated the greatest man then living as 'that reptile Mr. Burke.'

In spite, however, of this unfortunate choice, the general aspect of affairs was favourable to Hastings.

The King was on his side. The Company and its servants were zealous in his cause. Among public men he had many ardent friends. Such were Lord Mansfield, who had outlived the vigour of his body, but not that of his mind; and Lord Lansdowne, who, though unconnected with any party, retained the importance which belongs to great talents and knowledge. The ministers were generally believed to be favourable to the late Governor-General. They owed their power to the clamour which had been raised against Mr. Fox's East India Bill. The authors of that Bill, when accused of invading vested rights, and of setting up powers unknown to the Constitution, had defended themselves by pointing to the crimes of Hastings, and by arguing that abuses so extraordinary justified extraordinary measures. Those who, by opposing that bill, had raised themselves to the head of affairs would naturally be inclined to extenuate the evils which had been made the plea for administering so violent a remedy; and such, in fact, was their general disposition. The Lord Chancellor Thurlow, in particular, whose great place and force of intellect gave him a weight in the Government inferior only to that of Mr. Pitt, espoused the cause of Hastings with indecorous violence. Mr. Pitt, though he had censured many parts of the Indian system, had studiously abstained from saying a word against the late chief of the Indian Government. To Major Scott, indeed, the young minister had in private extolled Hastings as a great, a wonderful man, who had the highest claims on the Government. There was only one objection to granting all

that so eminent a servant of the public could ask. The resolution of censure still remained on the journals of the House of Commons. That resolution was, indeed, unjust; but, till it was rescinded, could the minister advise the King to bestow any mark of approbation on the person censured? If Major Scott is to be trusted, Mr. Pitt declared that this was the only reason which prevented the advisers of the Crown from conferring a peerage on the late Governor-General. Mr. Dundas was the only important member of the administration who was deeply committed to a different view of the subject. He had moved the resolution which created the difficulty; but even from him little was to be apprehended. Since he had presided over the committee on Eastern affairs, great changes had taken place. He was surrounded by new allies; he had fixed his hopes on new objects; and whatever may have been his good qualities—and he had many—flattery itself never reckoned rigid consistency in the number.

From the Ministry, therefore, Hastings had every reason to expect support; and the Ministry was very powerful. The Opposition was loud and vehement against him. But the Opposition, though formidable from the wealth and influence of some of its members, and from the admirable talents and eloquence of others, was outnumbered in Parliament, and odious throughout the country. Nor, as far as we can judge, was the Opposition generally desirous to engage in so serious an undertaking as the impeachment of an Indian Governor. Such an impeachment must last

for years. It must impose on the chiefs of the party an immense load of labour. Yet it could scarcely, in any manner, affect the event of the great political game. The followers of the coalition were therefore more inclined to revile Hastings than to prosecute him. They lost no opportunity of coupling his name with the names of the most hateful tyrants of whom history makes mention. The wits of Brooks's aimed their keenest sarcasms both at his public and at his domestic life. Some fine diamonds which he had presented, as it was rumoured, to the royal family, and a certain richly carved ivory bed which the Queen had done him the honour to accept from him, were favourite subjects of ridicule. One lively poet proposed, that the great acts of the fair Marian's present husband should be immortalized by the pencil of his predecessor; and that Imhoff should be employed to embellish the House of Commons with paintings of the bleeding Rohillas, of Nuncomar swinging, of Cheyte Sing letting himself down to the Ganges. Another, in an exquisitely humorous parody of Virgil's third eclogue, propounded the question, what that mineral could be of which the rays had power to make the most austere of princesses the friend of a wanton. A third described, with gay malevolence, the gorgeous appearance of Mrs. Hastings at St. James's, the galaxy of jewels torn from Indian Begums, which adorned her head-dress, her necklace gleaming with future votes, and the depending questions that shone upon her ears. Satirical attacks of this description, and perhaps a motion for a vote of censure, would have satisfied the great body of the Opposition. But

there were two men whose indignation was not to be so appeased, Philip Francis and Edmund Burke.

Francis had recently entered the House of Commons, and had already established a character there for industry and ability. He laboured indeed under one most unfortunate defect, want of fluency. But he occasionally expressed himself with a dignity and energy worthy of the greatest orators. Before he had been many days in Parliament, he incurred the bitter dislike of Pitt, who constantly treated him with as much asperity as the laws of debate would allow. Neither lapse of years nor change of scene had mitigated the enmities which Francis had brought back from the East. After his usual fashion, he mistook his malevolence for virtue, nursed it, as preachers tell us that we ought to nurse our good dispositions, and paraded it, on all occasions, with Pharisaical ostentation.

The zeal of Burke was still fiercer; but it was far purer. Men unable to understand the elevation of his mind have tried to find out some discreditable motive for the vehemence and pertinacity which he showed on this occasion. But they have altogether failed. The idle story that he had some private slight to revenge has long been given up, even by the advocates of Hastings. Mr. Gleig supposes that Burke was actuated by party spirit, that he retained a bitter remembrance of the fall of the coalition, that he attributed that fall to the exertions of the East India interest, and that he considered Hastings as the head and the representative of that interest. This explanation seems to be sufficiently refuted by a reference to dates. The

hostility of Burke to Hastings commenced long before the coalition; and lasted long-after Burke had become a strenuous supporter of those by whom the coalition had been defeated. It began when Burke and Fox, closely allied together, were attacking the influence of the Crown, and calling for peace with the American republic. It continued till Burke, alienated from Fox, and loaded with the favours of the Crown, died, preaching a crusade against the French republic. We surely cannot attribute to the events of 1784 an enmity which began in 1781, and which retained undiminished force long after persons far more deeply implicated than Hastings in the events of 1784 had been cordially forgiven. And why should we look for any other explanation of Burke's conduct than that which we find on the surface? The plain truth is that Hastings had committed some great crimes, and that the thought of those crimes made the blood of Burke boil in his veins. For Burke was a man in whom compassion for suffering, and hatred of injustice and tyranny, were as strong as in Las Casas or Clarkson. And although in him, as in Las Casas and in Clarkson, these noble feelings were alloyed with the infirmity which belongs to human nature, he is, like them, entitled to this great praise, that he devoted years of intense labour to the service of a people with whom he had neither blood nor language, neither religion nor manners in common, and from whom no requital, no thanks, no applause could be expected.

His knowledge of India was such as few, even of those Europeans who have passed many years in that country, have attained, and such as certainly was

never attained by any public man who had not quitted Europe. He had studied the history, the laws, and the usages of the East with an industry, such as is seldom found united to so much genius and so much sensibility. Others have perhaps been equally laborious, and have collected an equal mass of materials. But the manner in which Burke brought his higher powers of intellect to work on statements of facts, and on tables of figures, was peculiar to himself. In every part of those huge bales of Indian information which repelled almost all other readers, his mind, at once philosophical and poetical, found something to instruct or to delight. His reason analysed and digested those vast and shapeless masses; his imagination animated and coloured them. Out of darkness, and dullness, and confusion, he formed a multitude of ingenious theories and vivid pictures. He had, in the highest degree, that noble faculty whereby man is able to live in the past and in the future, in the distant and in the unreal. India and its inhabitants were not to him, as to most Englishmen, mere names and abstractions, but a real country and a real people. The burning sun, the strange vegetation of the palm and cocoa tree, the rice-field, the tank, the huge trees, older than the Mogul empire, under which the village crowds assemble, the thatched roof of the peasant's hut, the rich tracery of the mosque where the imaun prays with his face to Mecca, the drums, and banners, and gaudy idols, the devotee swinging in the air, the graceful maiden, with the pitcher on her head, descending the steps to the river-side, the black faces, the long beards, the yellow streaks of

sect, the turbans and the flowing robes, the spears and the silver maces, the elephants with their canopies of state, the gorgeous palanquin of the prince, and the close litter of the noble lady, all these things were to him as the objects amidst which his own life had been passed, as the objects which lay on the road between Beaconsfield and St. James's Street. All India was present to the eye of his mind, from the halls where suitors laid gold and perfumes at the feet of sovereigns to the wild moor where the gipsy camp was pitched, from the bazaar, humming like a bee-hive with the crowd of buyers and sellers, to the jungle where the lonely courier shakes his bunch of iron rings to scare away the hyenas. He had just as lively an idea of the insurrection at Benares as of Lord George Gordon's riots, and of the execution of Nuncomar as of the execution of Dr. Dodd. Oppression in Bengal was to him the same thing as oppression in the streets of London.

He saw that Hastings had been guilty of some most unjustifiable acts. All that followed was natural and necessary in a mind like Burke's. His imagination and his passions, once excited, hurried him beyond the bounds of justice and good sense. His reason, powerful as it was, became the slave of feelings which it should have controlled. His indignation, virtuous in its origin, acquired too much of the character of personal aversion. He could see no mitigating circumstance, no redeeming merit. His temper, which, though generous and affectionate, had always been irritable, had now been made almost savage by bodily infirmities and mental vexations.

Conscious of great powers and great virtues, he found himself, in age and poverty, a mark for the hatred of a perfidious court and a deluded people. In Parliament his eloquence was out of date. A young generation, which knew him not, had filled the House. Whenever he rose to speak, his voice was drowned by the unseemly interruption of lads who were in their cradles when his orations on the Stamp Act called forth the applause of the great Earl of Chatham. These things had produced on his proud and sensitive spirit an effect at which we cannot wonder. He could no longer discuss any question with calmness, or make allowance for honest differences of opinion. Those who think that he was more violent and acrimonious in debates about India than on other occasions, are ill informed respecting the last years of his life. In the discussions on the Commercial Treaty with the Court of Versailles, on the Regency, on the French Revolution, he showed even more virulence than in conducting the impeachment. Indeed it may be remarked that the very persons who called him a mischievous maniac, for condemning in burning words the Rohilla war and the spoliation of the Begums, exalted him into a prophet as soon as he began to declaim, with greater vehemence, and not with greater reason, against the taking of the Bastille and the insults offered to Marie Antoinette. To us he appears to have been neither a maniac in the former case, nor a prophet in the latter, but in both cases a great and good man, led into extravagance by a sensibility which domineered over all his faculties.

It may be doubted whether the personal antipathy

of Francis, or the nobler indignation of Burke, would have led their party to adopt extreme measures against Hastings, if his own conduct had been judicious. He should have felt that, great as his public services had been, he was not faultless, and should have been content to make his escape, without aspiring to the honours of a triumph. He and his agent took a different view. They were impatient for the rewards which, as they conceived, were deferred only till Burke's attack should be over. They accordingly resolved to force on a decisive action with an enemy for whom, if they had been wise, they would have made a bridge of gold. On the first day of the session of 1786, Major Scott reminded Burke of the notice given in the preceding year, and asked whether it was seriously intended to bring any charge against the late Governor-General. This challenge left no course open to the Opposition, except to come forward as accusers, or to acknowledge themselves calumniators. The administration of Hastings had not been so blameless, nor was the great party of Fox and North so feeble, that it could be prudent to venture on so bold a defiance. The leaders of the Opposition instantly returned the only answer which they could with honour return; and the whole party was irrevocably pledged to a prosecution.

Burke began his operations by applying for Papers. Some of the documents for which he asked were refused by the ministers, who, in the debate, held language such as strongly confirmed the prevailing opinion, that they intended to support Hastings. In April, the charges were laid on the table. They had

been drawn by Burke with great ability, though in a form too much resembling that of a pamphlet. Hastings was furnished with a copy of the accusation; and it was intimated to him that he might, if he thought fit, be heard in his own defence at the bar of the Commons.

Here again Hastings was pursued by the same fatality which had attended him ever since the day when he set foot on English ground. It seemed to be decreed that this man, so politic and so successful in the East, should commit nothing but blunders in Europe. Any judicious adviser would have told him that the best thing which he could do would be to make an eloquent, forcible, and affecting oration at the bar of the House; but that, if he could not trust himself to speak, and found it necessary to read, he ought to be as concise as possible. Audiences accustomed to extemporaneous debating of the highest excellence are always impatient of long written compositions. Hastings, however, sat down as he would have done at the Government-house in Bengal, and prepared a paper of immense length. That paper, if recorded on the consultations of an Indian administration, would have been justly praised as a very able minute. But it was now out of place. It fell flat, as the best written defence must have fallen flat, on an assembly accustomed to the animated and strenuous conflicts of Pitt and Fox. The members, as soon as their curiosity about the face and demeanour of so eminent a stranger was satisfied, walked away to dinner, and left Hastings to tell his story till midnight to the clerks and the Serjeant-at-arms.

All preliminary steps having been duly taken, Burke, in the beginning of June, brought forward the charge relating to the Rohilla war. He acted discreetly in placing this accusation in the van; for Dundas had formerly moved, and the House had adopted, a resolution condemning, in the most severe terms, the policy followed by Hastings with regard to Rohilcund. Dundas had little, or rather nothing, to say in defence of his own consistency; but he put a bold face on the matter, and opposed the motion. Among other things, he declared that, though he still thought the Rohilla war unjustifiable, he considered the services which Hastings had subsequently rendered to the State as sufficient to atone even for so great an offence. Pitt did not speak, but voted with Dundas; and Hastings was absolved by a hundred and nineteen votes against sixty-seven.

Hastings was now confident of victory. It seemed, indeed, that he had reason to be so. The Rohilla war was, of all his measures, that which his accusers might with greatest advantage assail. It had been condemned by the Court of Directors. It had been condemned by the House of Commons. It had been condemned by Mr. Dundas, who had since become the chief minister of the Crown for Indian affairs. Yet Burke, having chosen this strong ground, had been completely defeated on it. That, having failed here, he should succeed on any point, was generally thought impossible. It was rumoured at the clubs and coffee-houses that one or perhaps two more charges would be brought forward, that if, on those charges, the sense of the House of Commons should be against

impeachment, the Opposition would let the matter drop, that Hastings would be immediately raised to the peerage, decorated with the star of the Bath, sworn of the Privy Council, and invited to lend the assistance of his talents and experience to the India board. Lord Thurlow, indeed, some months before, had spoken with contempt of the scruples which prevented Pitt from calling Hastings to the House of Lords; and had even said that, if the Chancellor of the Exchequer was afraid of the Commons, there was nothing to prevent the Keeper of the Great Seal from taking the royal pleasure about a patent of peerage. The very title was chosen. Hastings was to be Lord Daylesford. For, through all changes of scene and changes of fortune, remained unchanged his attachment to the spot which had witnessed the greatness and the fall of his family, and which had borne so great a part in the first dreams of his young ambition.

But in a very few days these fair prospects were overcast. On the thirteenth of June, Mr. Fox brought forward, with great ability and eloquence, the charge respecting the treatment of Cheyte Sing. Francis followed on the same side. The friends of Hastings were in high spirits when Pitt rose. With his usual abundance and felicity of language, the Minister gave his opinion on the case. He maintained that the Governor-General was justified in calling on the Rajah of Benares for pecuniary assistance, and in imposing a fine when that assistance was contumaciously withheld. He also thought that the conduct of the Governor-General during the insurrection had been

distinguished by ability and presence of mind. He censured, with great bitterness, the conduct of Francis, both in India and in Parliament, as most dishonest and malignant. The necessary inference from Pitt's arguments seemed to be that Hastings ought to be honourably acquitted; and both the friends and the opponents of the Minister expected from him a declaration to that effect. To the astonishment of all parties, he concluded by saying that, though he thought it right in Hastings to fine Cheyte Sing for contumacy, yet the amount of the fine was too great for the occasion. On this ground, and on this ground alone, did Mr. Pitt, applauding every other part of the conduct of Hastings with regard to Benares, declare that he should vote in favour of Mr. Fox's motion.

The House was thunderstruck; and it well might be so. For the wrong done to Cheyte Sing, even had it been as flagitious as Fox and Francis contended, was a trifle when compared with the horrors which had been inflicted on Rohilcund. But if Mr. Pitt's view of the case of Cheyte Sing were correct, there was no ground for an impeachment, or even for a vote of censure. If the offence of Hastings was really no more than this, that, having a right to impose a mulct, the amount of which mulct was not defined, but was left to be settled by his discretion, he had not for his own advantage, but for that of the State, demanded too much, was this an offence which required a criminal proceeding of the highest solemnity, a criminal proceeding, to which, during sixty years, no public functionary had been subjected? We can see, we think, in what way a man of sense and

integrity might have been induced to take any course respecting Hastings, except the course which Mr. Pitt took. Such a man might have thought a great example necessary, for the preventing of injustice, and for the vindicating of the national honour, and might, on that ground, have voted for impeachment both on the Rohilla charge, and on the Benares charge. Such a man might have thought that the offences of Hastings had been atoned for by great services, and might, on that ground, have voted against the impeachment, on both charges. With great diffidence, we give it as our opinion that the most correct course would, on the whole, have been to impeach on the Rohilla charge, and to acquit on the Benares charge. Had the Benares charge appeared to us in the same light in which it appeared to Mr. Pitt, we should, without hesitation, have voted for acquittal on that charge. The one course which it is inconceivable that any man of a tenth part of Mr. Pitt's abilities can have honestly taken was the course which he took. He acquitted Hastings on the Rohilla charge. He softened down the Benares charge till it became no charge at all; and then he pronounced that it contained matter for impeachment.

Nor must it be forgotten that the principal reason assigned by the ministry for not impeaching Hastings on account of the Rohilla war was this, that the delinquencies of the early part of his administration had been atoned for by the excellence of the later part. Was it not most extraordinary that men who had held this language could afterwards vote that the later part of his administration furnished matter for no less

than twenty articles of impeachment? They first represented the conduct of Hastings in 1780 and 1781 as so highly meritorious that, like works of supererogation in the Catholic theology, it ought to be efficacious for the cancelling of former offences; and they then prosecuted him for his conduct in 1780 and 1781.

The general astonishment was the greater, because only twenty-four hours before, the members on whom the minister could depend had received the usual notes from the Treasury, begging them to be in their places and to vote against Mr. Fox's motion. It was asserted by Mr. Hastings, that, early on the morning of the very day on which the debate took place, Dundas called on Pitt, woke him, and was closeted with him many hours. The result of this conference was a determination to give up the late Governor-General to the vengeance of the Opposition. It was impossible even for the most powerful minister to carry all his followers with him in so strange a course. Several persons high in office, the Attorney-General, Mr. Grenville, and Lord Mulgrave, divided against Mr. Pitt. But the devoted adherents who stood by the head of the Government without asking questions, were sufficiently numerous to turn the scale. A hundred and nineteen members voted for Mr. Fox's motion; seventy-nine against it. Dundas silently followed Pitt.

That good and great man, the late William Wilberforce, often related the events of this remarkable night. He described the amazement of the House, and the bitter reflections which were muttered against the Prime Minister by some of the habitual supporters

of Government. Pitt himself appeared to feel that his conduct required some explanation. He left the treasury bench, sat for some time next to Mr. Wilberforce, and very earnestly declared that he had found it impossible, as a man of conscience, to stand any longer by Hastings. The business, he said, was too bad. Mr. Wilberforce, we are bound to add, fully believed that his friend was sincere, and that the suspicions to which this mysterious affair gave rise were altogether unfounded.

Those suspicions, indeed, were such as it is painful to mention. The friends of Hastings, most of whom, it is to be observed, generally supported the administration, affirmed that the motive of Pitt and Dundas was jealousy. Hastings was personally a favourite with the King. He was the idol of the East India Company and of its servants. If he were absolved by the Commons, seated among the Lords, admitted to the Board of Control, closely allied with the strong-minded and imperious Thurlow, was it not almost certain that he would soon draw to himself the entire management of Eastern affairs? Was it not possible that he might become a formidable rival in the cabinet? It had probably got abroad that very singular communications had taken place between Thurlow and Major Scott, and that, if the First Lord of the Treasury was afraid to recommend Hastings for a peerage, the Chancellor was ready to take the responsibility of that step on himself. Of all ministers, Pitt was the least likely to submit with patience to such an encroachment on his functions. If the Commons impeached Hastings, all danger was at

an end. The proceeding, however it might terminate, would probably last some years. In the meantime, the accused person would be excluded from honours and public employments, and could scarcely venture even to pay his duty at Court. Such were the motives attributed by a great part of the public to the young minister, whose ruling passion was generally believed to be avarice of power.

The prorogation soon interrupted the discussions respecting Hastings. In the following year, those discussions were resumed. The charge touching the spoliation of the Begums was brought forward by Sheridan, in a speech which was so imperfectly reported that it may be said to be wholly lost, but which was, without doubt, the most elaborately brilliant of all the productions of his ingenious mind. The impression which it produced was such as has never been equalled. He sat down, not merely amidst cheering, but amidst the loud clapping of hands, in which the Lords below the bar and the strangers in the gallery joined. The excitement of the House was such that no other speaker could obtain a hearing; and the debate was adjourned. The ferment spread fast through the town. Within four and twenty hours, Sheridan was offered a thousand pounds for the copyright of the speech, if he would himself correct it for the Press. The impression made by this remarkable display of eloquence on severe and experienced critics, whose discernment may be supposed to have been quickened by emulation, was deep and permanent. Mr. Windham, twenty years later, said that the speech deserved all its fame, and was, in spite of

some faults of taste, such as were seldom wanting either in the literary or in the parliamentary performances of Sheridan, the finest that had been delivered within the memory of man. Mr. Fox, about the same time, being asked by the late Lord Holland what was the best speech ever made in the House of Commons, assigned the first place, without hesitation, to the great oration of Sheridan on the Oude charge.

When the debate was resumed, the tide ran so strongly against the accused that his friends were coughed and scraped down. Pitt declared himself for Sheridan's motion; and the question was carried by a hundred and seventy-five votes against sixty-eight.

The Opposition, flushed with victory and strongly supported by the public sympathy, proceeded to bring forward a succession of charges relating chiefly to pecuniary transactions. The friends of Hastings were discouraged, and, having now no hope of being able to avert an impeachment, were not very strenuous in their exertions. At length the House, having agreed to twenty articles of charge, directed Burke to go before the Lords, and to impeach the late Governor-General of High Crimes and Misdemeanours. Hastings was at the same time arrested by the Serjeant-at-arms, and carried to the bar of the Peers.

The session was now within ten days of its close. It was, therefore, impossible that any progress could be made in the trial till the next year. Hastings was admitted to bail; and further proceedings were postponed till the Houses should re-assemble.

When Parliament met in the following winter, the Commons proceeded to elect a committee for manag-

ing the impeachment. Burke stood at the head; and with him were associated most of the leading members of the Opposition. But when the name of Francis was read a fierce contention arose. It was said that Francis and Hastings were notoriously on bad terms, that they had been at feud during many years, that on one occasion their mutual aversion had impelled them to seek each other's lives, and that it would be improper and indelicate to select a private enemy to be a public accuser. It was urged on the other side with great force, particularly by Mr. Windham, that impartiality, though the first duty of a judge, had never been reckoned among the qualities of an advocate; that in the ordinary administration of criminal justice among the English, the aggrieved party, the very last person who ought to be admitted into the jury-box, is the prosecutor; that what was wanted in a manager was, not that he should be free from bias, but that he should be able, well informed, energetic, and active. The ability and information of Francis were admitted; and the very animosity with which he was reproached, whether a virtue or a vice, was at least a pledge for his energy and activity. It seems difficult to refute these arguments. But the inveterate hatred borne by Francis to Hastings had excited general disgust. The House decided that Francis should not be a manager. Pitt voted with the majority, Dundas with the minority.

In the meantime, the preparations for the trial had proceeded rapidly; and on the thirteenth of February, 1789, the sittings of the Court commenced. There have been spectacles more dazzling to the eye,

more gorgeous with jewellery and cloth of gold, more attractive to grown-up children, than that which was then exhibited at Westminster; but, perhaps, there never was a spectacle so well calculated to strike a highly cultivated, a reflecting, an imaginative mind. All the various kinds of interest which belong to the near and to the distant, to the present and to the past, were collected on one spot and in one hour. All the talents and all the accomplishments which are developed by liberty and civilization were now displayed, with every advantage that could be derived both from co-operation and from contrast. Every step in the proceedings carried the mind either backward, through many troubled centuries, to the days when the foundations of our constitution were laid; or far away, over boundless seas and deserts, to dusky nations living under strange stars, worshipping strange gods, and writing strange characters from right to left. The High Court of Parliament was to sit, according to forns handed down from the days of the Plantagenets, on an Englishman accused of exercising tyranny over the lord of the holy city of Benares, and over the ladies of the princely house of Oude.

The place was worthy of such a trial. It was the great hall of William Rufus, the hall which had resounded with acclamations at the inauguration of thirty kings, the hall which had witnessed the just sentence of Bacon and the just absolution of Somers, the hall where the eloquence of Strafford had for a moment awed and melted a victorious party inflamed with just resentment, the hall where Charles had confronted the High Court of Justice with the placid

courage which has half redeemed his fame. Neither military nor civil pomp was wanting. The avenues were lined with grenadiers. The streets were kept clear by cavalry. The peers, robed in gold and ermine, were marshalled by the heralds under Garter King-at-arms. The judges in their vestments of state attended to give advice on points of law. Near a hundred and seventy lords, three-fourths of the Upper House as the Upper House then was, walked in solemn order from their usual place of assembling to the tribunal. The junior Baron present led the way, George Eliott, Lord Heathfield, recently ennobled for his memorable defence of Gibraltar against the fleets and armies of France and Spain. The long procession was closed by the Duke of Norfolk, Earl Marshal of the realm, by the great dignitaries, and by the brothers and sons of the King. Last of all came the Prince of Wales, conspicuous by his fine person and noble bearing. The grey old walls were hung with scarlet. The long galleries were crowded by an audience such as has rarely excited the fears or the emulation of an orator. There were gathered together, from all parts of a great, free, enlightened, and prosperous empire, grace and female loveliness, wit and learning, the representatives of every science and of every art. There were seated round the Queen the fair-haired young daughters of the house of Brunswick. There the Ambassadors of great Kings and Commonwealths gazed with admiration on a spectacle which no other country in the world could present. There Siddons, in the prime of her majestic beauty, looked with emotion on a scene surpassing all the imitations of the

stage. There the historian of the Roman Empire thought of the days when Cicero pleaded the cause of Sicily against Verres, and when, before a senate which still retained some show of freedom, Tacitus thundered against the oppressor of Africa. There were seen, side by side, the greatest painter and the greatest scholar of the age. The spectacle had allured Reynolds from that easel which has preserved to us the thoughtful foreheads of so many writers and statesmen, and the sweet smiles of so many noble matrons. It had induced Parr to suspend his labours in that dark and profound mine from which he had extracted a vast treasure of erudition, a treasure too often buried in the earth, too often paraded with injudicious and inelegant ostentation, but still precious, massive, and splendid. There appeared the voluptuous charms of her to whom the heir of the throne had in secret plighted his faith. There too was she, the beautiful mother of a beautiful race, the Saint Cecilia, whose delicate features, lighted up by love and music, art has rescued from the common decay. There were the members of that brilliant society which quoted, criticized, and exchanged repartees, under the rich peacock hangings of Mrs. Montague. And there the ladies whose lips, more persuasive than those of Fox himself, had carried the Westminster election against palace and treasury, shone round Georgiana Duchess of Devonshire.

The Serjeants made proclamation. Hastings advanced to the bar, and bent his knee. The culprit was indeed not unworthy of that great presence. He had ruled an extensive and populous country, had made laws and treaties, had sent forth armies, had set

up and pulled down princes. And in his high place he had so borne himself, that all had feared him, that most had loved him, and that hatred itself could deny him no title to glory, except virtue. He looked like a great man, and not like a bad man. A person small and emaciated, yet deriving dignity from a carriage which, while it indicated deference to the court, indicated also habitual self-possession and self-respect, a high and intellectual forehead, a brow pensive, but not gloomy, a mouth of inflexible decision, a face pale and worn, but serene, on which was written, as legibly as under the picture in the council-chamber at Calcutta, *Mens aequa in arduis*; such was the aspect with which the great Proconsul presented himself to his judges.

His counsel accompanied him, men all of whom were afterwards raised by their talents and learning to the highest posts in their profession, the bold and strong-minded Law, afterwards Chief Justice of the King's Bench; the more humane and eloquent Dallas, afterwards Chief Justice of the Common Pleas; and Plomer who, near twenty years later, successfully conducted in the same high court the defence of Lord Melville, and subsequently became Vice-Chancellor and Master of the Rolls.

But neither the culprit nor his advocates attracted so much notice as the accusers. In the midst of the blaze of red drapery, a space had been fitted up with green benches and tables for the Commons. The managers, with Burke at their head, appeared in full dress. The collectors of gossip did not fail to remark that even Fox, generally so regardless of his appear-

ance, had paid to the illustrious tribunal the compliment of wearing a bag and sword. Pitt had refused to be one of the conductors of the impeachment; and his commanding, copious, and sonorous eloquence was wanting to that great muster of various talents. Age and blindness had unfitted Lord North for the duties of a public prosecutor; and his friends were left without the help of his excellent sense, his tact and his urbanity. But in spite of the absence of these two distinguished members of the Lower House, the box in which the managers stood contained an array of speakers such as perhaps had not appeared together since the great age of Athenian eloquence. There were Fox and Sheridan, the English Demosthenes and the English Hyperides. There was Burke, ignorant, indeed, or negligent of the art of adapting his reasonings and his style to the capacity and taste of his hearers, but in amplitude of comprehension and richness of imagination superior to every orator, ancient or modern. There, with eyes reverentially fixed on Burke, appeared the finest gentleman of the age, his form developed by every manly exercise, his face beaming with intelligence and spirit, the ingenious, the chivalrous, the high-souled Windham. Nor, though surrounded by such men, did the youngest manager pass unnoticed. At an age when most of those who distinguish themselves in life are still contending for prizes and fellowships at college, he had won for himself conspicuous place in Parliament. No advantage of fortune or connexion was wanting that could set off to the height his splendid talents and his unblemished honour. At twenty-three

he had been thought worthy to be ranked with the veteran statesmen who appeared as the delegates of the British Commons, at the bar of the British nobility.

The charges and the answers of Hastings were first read. The ceremony occupied two whole days, and was rendered less tedious than it would otherwise have been by the silver voice and just emphasis of Cowper, the clerk of the court, a near relation of the amiable poet. On the third day Burke rose. Four sittings were occupied by his opening speech, which was intended to be a general introduction to all the charges. With an exuberance of thought and a splendour of diction which more than satisfied the highly raised expectation of the audience, he described the character and institutions of the natives of India, recounted the circumstances in which the Asiatic empire of Britain had originated, and set forth the constitution of the Company and of the English Presidencies. Having thus attempted to communicate to his hearers an idea of Eastern society, as vivid as that which existed in his own mind, he proceeded to arraign the administration of Hastings as systematically conducted in defiance of morality and public law. The energy and pathos of the great orator extorted expressions of unwonted admiration from the stern and hostile Chancellor, and, for a moment, seemed to pierce even the resolute heart of the defendant. The ladies in the galleries, unaccustomed to such displays of eloquence, excited by the solemnity of the occasion, and perhaps not unwilling to display their taste and sensibility, were in a state of uncontrollable

emotion. Handkerchiefs were pulled out; smelling-bottles were handed round; hysterical sobs and screams were heard: and Mrs. Sheridan was carried out in a fit. At length the orator concluded. Raising his voice till the old arches of Irish oak resounded, 'Therefore,' said he, 'hath it with all confidence been ordered, by the Commons of Great Britain, that I impeach Warren Hastings of high crimes and misdemeanours. I impeach him in the name of the Commons' House of Parliament, whose trust he has betrayed. I impeach him in the name of the English nation, whose ancient honour he has sullied. I impeach him in the name of the people of India, whose rights he has trodden under foot, and whose country he has turned into a desert. Lastly, in the name of human nature itself, in the name of both sexes, in the name of every age, in the name of every rank, I impeach the common enemy and oppressor of all!'

When the deep murmur of various emotions had subsided, Mr. Fox rose to address the Lords respecting the course of proceeding to be followed. The wish of the accusers was that the Court would bring to a close the investigation of the first charge before the second was opened. The wish of Hastings and of his counsel was that the managers should open all the charges, and produce all the evidence for the prosecution, before the defence began. The Lords retired to their own House to consider the question. The Chancellor took the side of Hastings. Lord Loughborough, who was now in opposition, supported the demand of the managers. The division showed which way the

inclination of the tribunal leaned. A majority of near three to one decided in favour of the course for which Hastings contended.

When the Court sat again, Mr. Fox, assisted by Mr. Grey, opened the charge respecting Cheyte Sing, and several days were spent in reading papers and hearing witnesses. The next article was that relating to the Princesses of Oude. The conduct of this part of the case was entrusted to Sheridan. The curiosity of the public to hear him was unbounded. His sparkling and highly finished declamation lasted two days; but the Hall was crowded to suffocation during the whole time. It was said that fifty guineas had been paid for a single ticket. Sheridan, when he concluded, contrived, with a knowledge of stage effect which his father might have envied, to sink back, as if exhausted, into the arms of Burke, who hugged him with the energy of generous admiration.

June was now far advanced. The session could not last much longer; and the progress which had been made in the impeachment was not very satisfactory. There were twenty charges. On two only of these had even the case for the prosecution been heard; and it was now a year since Hastings had been admitted to bail.

The interest taken by the public in the trial was great when the Court began to sit, and rose to the height when Sheridan spoke on the charge relating to the Begums. From that time the excitement went down fast. The spectacle had lost the attraction of novelty. The great displays of rhetoric were over. What was behind was not of a nature to entice men

of letters from their books in the morning, or to tempt ladies who had left the masquerade at two to be out of bed before eight. There remained examinations and cross-examinations. There remained statements of accounts. There remained the reading of papers, filled with words unintelligible to English ears, with lacs and crores, zemindars and aumils, sunnuds and perwannahs, jaghires and nuzzurs. There remained bickerings, not always carried on with the best taste or with the best temper, between the managers of the impeachment and the counsel for the defence, particularly between Mr. Burke and Mr. Law. There remained the endless marches and countermarches of the Peers between their House and the Hall: for as often as a point of law was to be discussed, their Lordships retired to discuss it apart; and the consequence was, as a Peer wittily said, that the judges walked and the trial stood still.

In truth, it is impossible to deny that impeachment, though it is a fine ceremony, and though it may have been useful in the seventeenth century, is not a proceeding from which much good can now be expected. Whatever confidence may be placed in the decision of the Peers on an appeal arising out of ordinary litigation, it is certain that no man has the least confidence in their impartiality, when a great public functionary, charged with a great state crime, is brought to their bar. They are all politicians. There is hardly one among them whose vote on an impeachment may not be confidently predicted before a witness has been examined; and, even if it were possible to rely on their justice, they would still be quite unfit

to try such a cause as that of Hastings. They sit only during half the year. They have to transact much legislative and much judicial business. The law-lords, whose advice is required to guide the unlearned majority, are employed daily in administering justice elsewhere. It is impossible, therefore, that during a busy session, the Upper House should give more than a few days to an impeachment. To expect that their Lordships would give up partridge-shooting, in order to bring the greatest delinquent to speedy justice, or relieve accused innocence by speedy acquittal, would be unreasonable indeed. A well-constituted tribunal, sitting regularly six days in the week, and nine hours in the day, would have brought the trial of Hastings to a close in less than three months. The Lords had not finished their work in seven years.

The result ceased to be a matter of doubt, from the time when the Lords resolved that they would be guided by the rules of evidence which are received in the inferior courts of the realm. Those rules, it is well known, exclude much information which would be quite sufficient to determine the conduct of any reasonable man, in the most important transactions of private life. These rules, at every assizes, save scores of culprits, whom judges, jury, and spectators, firmly believe to be guilty. But when those rules were rigidly applied to offences committed many years before, at the distance of many thousands of miles, conviction was, of course, out of the question. We do not blame the accused and his counsel for availing themselves of every legal advantage in order to obtain

an acquittal. But it is clear that an acquittal so obtained cannot be pleaded in bar of the judgment of history.

At length, in the spring of 1795, the decision was pronounced, near eight years after Hastings had been brought by the Serjeant-at-arms of the Commons to the bar of the Lords. On the last day of this great procedure the public curiosity, long suspended, seemed to be revived. Anxiety about the judgment there could be none; for it had been fully ascertained that there was a great majority for the defendant. Nevertheless many wished to see the pageant, and the Hall was as much crowded as on the first day. But those who, having been present on the first day, now bore a part in the proceedings of the last, were few; and most of those few were altered men.

Only twenty-nine Peers voted. Of these only six found Hastings guilty on the charges relating to Cheyte Sing and to the Begums. On other charges, the majority in his favour was still greater. On some he was unanimously absolved. He was then called to the bar, was informed from the woolsack that the Lords had acquitted him, and was solemnly discharged. He bowed respectfully and retired.

We have said that the decision had been fully expected. It was also generally approved. At the commencement of the trial there had been a strong and indeed unreasonable feeling against Hastings. At the close of the trial there was a feeling equally strong and equally unreasonable in his favour. One cause of the change was, no doubt, what is commonly called

the fickleness of the multitude, but what seems to us to be merely the general law of human nature. Both in individuals and in masses violent excitement is always followed by remission, and often by reaction. We are all inclined to depreciate whatever we have overpraised, and, on the other hand, to show undue indulgence where we have shown undue rigour. It was thus in the case of Hastings. The length of his trial, moreover, made him an object of compassion. It was thought, and not without reason, that, even if he was guilty, he was still an ill-used man, and that an impeachment of eight years was more than a sufficient punishment. It was also felt that, though, in the ordinary course of criminal law, a defendant is not allowed to set off his good actions against his crimes, a great political cause should be tried on different principles, and that a man who had governed an empire during thirteen years might have done some very reprehensible things, and yet might be on the whole deserving of rewards and honours rather than of fine and imprisonment. The Press, an instrument neglected by the prosecutors, was used by Hastings and his friends with great effect. Every ship, too, that arrived from Madras or Bengal, brought a caddy full of his admirers. Every gentleman from India spoke of the late Governor-General as having deserved better, and having been treated worse, than any man living. The effect of this testimony unanimously given by all persons who knew the East, was naturally very great. Retired members of the Indian services, civil and military, were settled in all corners of the kingdom. Each of them was, of course, in his own

little circle, regarded as an oracle on an Indian question; and they were, with scarcely one exception, the zealous advocates of Hastings. It is to be added, that the numerous addresses to the late Governor-General, which his friends in Bengal obtained from the natives and transmitted to England, made a considerable impression. To these addresses we attach little or no importance. That Hastings was beloved by the people whom he governed is true; but the eulogies of pundits, zemindars, Mahommedan doctors, do not prove it to be true. For an English collector or judge would have found it easy to induce any native who could write to sign a panegyric on the most odious ruler that ever was in India. It was said that at Benares, the very place at which the acts set forth in the first article of impeachment had been committed, the natives had erected a temple to Hastings; and this story excited a strong sensation in England. Burke's observations on the apotheosis were admirable. He saw no reason for astonishment, he said, in the incident which had been represented as so striking. He knew something of the mythology of the Brahmins. He knew that as they worshipped some gods from love, so they worshipped others from fear. He knew that they erected shrines, not only to the benignant deities of light and plenty, but also to the fiends who preside over small-pox and murder; nor did he at all dispute the claim of Mr. Hastings to be admitted into such a Pantheon. This reply has always struck us as one of the finest that ever was made in Parliament. It is a grave and forcible argument, decorated by the most brilliant wit and fancy.

Hastings was, however, safe. But in everything except character, he would have been far better off if, when first impeached, he had at once pleaded guilty, and paid a fine of fifty thousand pounds.

*Thomas Babington Macaulay.*

## THE MURDER OF THOMAS BECKET

Between Southampton and the Norman coast communications were easy and rapid ; and the account of the arrival of the censured bishops, with the indignant words which burst from the king at the unwelcome news which he heard from them for the first time, is an imperfect legend in which the transactions of many days must have been epitomized.

The bishops did not leave England till the 20th or 21st of December, and before their appearance the king must have heard already not only of the excommunications and of the daring misuse of his own name, but of the armed progress to London, of the remarkable demonstration there, of the archbishop's defiance of the government, of the mission of the Abbot of St. Albans, of the threats of the priest, and of the imminent danger of a general rebellion. During the first three weeks of this December many an anxious council must have been held in the Norman court, and many a scheme talked over and rejected for dealing with this impracticable firebrand. What could be done with him? No remedy was now available but a violent one. The law could not restrain a man who claimed to be superior to law, and whose claims the nation was not prepared directly to deny. Three centuries later the solution would have been a formal trial, with the block and axe as the sequel of a judicial sentence. Ecclesiastical pretensions were still formidable under the Tudors, but the State had acquired strength to control them. In our own day

the phantom has been exorcised altogether, and an archbishop who used Becket's language would be consigned to an asylum. In Becket's own time neither of these methods was possible. Becket himself could neither be borne with, consistently with the existence of the civil government, nor resisted save at a risk of censures which even the king scarcely dared to encounter. A bishop might have committed the seven deadly sins, but his word was still a spell which could close the gates of heaven. The allegiance of the people could not be depended upon for a day if Becket chose to declare the king excommunicated, unless the Pope should interfere: and the Pope was an inadequate resource in a struggle for the supremacy of the Church over the State. It was not until secular governments could look Popes and Bishops in the face, and bid them curse till they were tired, that the relations of Church and State admitted of legal definition. Till that time should arrive the ecclesiastical theory was only made tolerable by submitting to the checks of tacit compromise and practical good sense.

Necessities for compromises of this kind exist at all times. In the most finished constitutions powers are assigned to the different branches of the State which it would be inconvenient or impossible to remove, yet which would cause an immediate catastrophe if the theory were made the measure of practice. The Crown retains prerogatives at present which would be fatal to it if strained. Parliament would make itself intolerable if it asserted the entire privileges which it legally possesses. The clergy in the twelfth century

were allowed and believed to be ministers of God in a sense in which neither Crown nor baron dared appropriate the name to themselves. None the less the clergy could not be allowed to reduce Crown and barons into entire submission to their own pleasure. If either churchman or king broke the tacit bargain of mutual moderation which enabled them to work together harmoniously, the relations between the two orders might not admit of more satisfactory theoretic adjustment; but there remained the resource to put out of the way the disturber of the peace.

Fuel ready to kindle was lying dry throughout Henry's dominions. If Becket was to be allowed to fling about excommunications at his own pleasure, to travel through the country attended by knights in arms, and surrounded by adoring fools who regarded him as a supernatural being, it was easy to foresee the immediate future of England and of half France. To persons, too, who knew the archbishop as well as Henry's court knew him, the character of the man himself who was causing so much anxiety must have been peculiarly irritating. Had Becket been an Anselm, he might have been credited with a desire to promote the interests of the Church, not for power's sake, but for the sake of those spiritual and moral influences which the Catholic Church was still able to exert, at least in some happy instances. But no such high ambition was to be traced either in Becket's agitation or in Becket's own disposition. He was still the self-willed, violent chancellor, with the dress of the saint upon him, but not the nature. His cause was not the mission of the Church to purify and

elevate mankind, but the privilege of the Church to control the civil government, and to dictate the law in virtue of magical powers which we now know to have been a dream and a delusion. His personal religion was not the religion of a regenerated heart, but the religion of self-torturing asceticism, a religion of the scourge and the hair shirt, a religion in which the evidences of grace were to be traced not in humbleness and truth, but in the worms and maggots which crawled about his body. He was the impersonation not of what was highest and best in the Catholic Church, but of what was falsest and worst. The fear which he inspired was not the reverence willingly offered to a superior nature, but a superstitious terror like that felt for witches and enchanters, which brave men at the call of a higher duty could dare to defy.

No one knows what passed at Bayeux during the first weeks of that December. King and council, knights and nobles, squires and valets must have talked of little else but Becket and his doing. The pages at Winchester laid their hands on their daggers when the priest delivered his haughty message. The peers and gentlemen who surrounded Henry at Bayeux are not likely to have felt more gently as each day brought news from England of some fresh audacity. At length, a few days before Christmas, the three bishops arrived. Two were under the curse, and could not be admitted into the king's presence. The Archbishop of York, being only suspended, carried less contamination with him. At a council the Archbishop was introduced, and produced Alexander's

letters. From these it appeared not only that he and the other bishops were denounced by name, but that every person who had taken any part in the young king's coronation was by implication excommunicated also. It is to be remembered that the king had received a positive sanction for the coronation from Alexander; that neither he nor the bishops had received the prohibition till the ceremony was over; while there is reason to believe that the prohibitory letter, which the king might have respected, had been kept back by Becket himself.

The Archbishop of York still advised forbearance, and an appeal once more to Rome. The Pope would see at last what Becket really was, and would relieve the country of him. But an appeal to Rome would take time, and England meanwhile might be in flames. 'By God's eyes,' said the king, 'if all are excommunicated who were concerned in the coronation, I am excommunicated also.' Some one (the name of the speaker is not mentioned) said that there would be no peace while Becket lived. With the fierce impatience of a man baffled by a problem which he has done his best to solve, and has failed through no fault of his own, Henry is reported to have exclaimed: 'Is this varlet that I loaded with kindness, that came first to court to me on a lame mule, to insult me and my children, and take my crown from me? What cowards have I about me, that no one will deliver me from this lowborn priest!' It is very likely that Henry used such words. The greatest prince that ever sat on throne, if tried as Henry had been, would have said the same; and Henry had used almost the same

language to the bishops at Chinon in 1166. But it is evident that much is still untold. These passionate denunciations can have been no more than the outcome of long and ineffectual deliberation. Projects must have been talked over and rejected; orders were certainly conceived which were to be sent to the archbishop, and measures were devised for dealing with him short of his death. He was to be required to absolve the censured bishops. If he refused, he might be sent in custody to the young king, he might be brought to Normandy, he might be exiled from the English dominions, or he might be imprisoned in some English castle. Indications can be traced of all these plans; and something of the kind would probably have been resolved upon, although it must have been painfully clear also that, without the Pope's help, none of them would really meet the difficulty. But the result was that the king's friends, seeing their master's perplexity, determined to take the risk on themselves, and deliver both him and their country. If the king acted, the king might be excommunicated, and the empire might be laid under interdict, with the consequences which every one foresaw. For their own acts the penalty would but fall upon themselves. They did not know, perhaps, distinctly what they meant to do, but something might have to be done which the king must condemn if they proposed it to him.

But being done unknown,  
He would have found it afterwards well done.

Impetuous loyalty to the sovereign was in the spirit of the age.

Among the gentlemen about his person whom Henry had intended to employ, could he have resolved upon the instructions which were to be given to them, were four knights of high birth and large estate—Sir Reginald Fitzurse, of Somersetshire, a tenant in chief of the Crown, whom Becket himself had originally introduced into the court; Sir Hugh de Morville, custodian of Knaresborough Castle, and justiciary of Northumberland; Sir William de Tracy, half a Saxon, with royal blood in him; and Sir Richard le Breton, who had been moved to volunteer in the service by another instance of Becket's dangerous meddling. Le Breton was a friend of the king's brother William, whom the archbishop had separated from the lady to whom he was about to be married on some plea of consanguinity. Sir William de Mandeville and others were to have been joined in the commission. But these four chose to anticipate both their companions and their final orders, and started alone.\* Their disappearance was observed. An express was sent to recall them, and the king supposed that they

\* Mandeville came afterwards to Canterbury, and being asked what he had been prepared to do if he had found the archbishop alive, he said 'that he would have taken the archbishop sharply to task for his attacks upon his sovereign: if the archbishop had been reasonable, there would have been peace; if he had persisted in his obstinacy and presumption, beyond doubt he would have been compelled to yield.' *Mandeville*, presumably, had direct instructions from the king. *Materials*, Vol. I, p. 126.

had returned. But they had gone by separate routes to separate ports. The weather was fair for the season of the year, with an east wind perhaps; and each had found a vessel without difficulty to carry him across the Channel. The rendezvous was Sir Ranulf de Broc's castle of Saltwood, near Hythe, thirteen miles from Canterbury.

The archbishop meanwhile had returned from his adventurous expedition. The young king and his advisers had determined to leave him no fair cause of complaint, and had sent orders for the restoration of his wine and the release of the captured seamen; but the archbishop would not wait for the State to do him justice. On Christmas Eve he was further exasperated by the appearance at the gate of his palace of one of his sumpter mules, which had been brutally mutilated by Sir Ranulf de Broc's kinsman Robert. 'The viper's brood,' as Herbert de Bosham said, 'were lifting up their heads. The hornets were out. Bulls of Bashan compassed the archbishop round about.' The Earl of Cornwall's warning had reached him, but 'fight, not flight,' was alone in his thoughts. He, too, was probably weary of the strife, and may have felt that he would serve his cause more effectually by death than by life. On Christmas day he preached in the cathedral on the text 'Peace to men of good will.' There was no peace, he said, except to men of good will. He spoke passionately of the trials of the church. As he drew towards an end he alluded to the possibility of his own martyrdom. He could scarcely articulate for tears. The congregation were sobbing round him. Suddenly his face altered, his

tone changed. Glowing with anger, with the fatal candles in front of him, and in a voice of thunder, the solemn and the absurd strangely blended in the overwhelming sense of his own wrongs, he cursed the intruders into his churches; he cursed Sir Ranulf de Broc; he cursed Robert de Broc for cutting off his mule's tail; he cursed by name several of the old king's most intimate councillors who were at the court in Normandy. At each fierce imprecation he quenched a light, and dashed down a candle. 'As he spoke,' says the enthusiastic Herbert, repeating the figure under which he had described his master's appearance at Northampton, 'you saw the very beast of the prophet's vision, with the face of a lion and the face of a man.' He had drawn the spiritual sword, as he had sworn that he would. So experienced a man of the world could not have failed to foresee that he was provoking passions which would no longer respect his office, and that no rising in England would now be in time to save him. He was in better spirits, it was observed, after he had discharged his anathema. The Christmas festival was held in the hall. Asceticism was a virtue which was never easy to him. He indulged his natural inclinations at all permitted times, and on this occasion he ate and drank more copiously than usual.

The next day Becket received another warning that he was in personal danger. He needed no friends to tell him that. The only attention which he paid to these messages was to send his secretary Herbert and his cross-bearer Alexander Llewellyn to France, to report his situation to Lewis and to the Archbishop of

Sens.\* He told Herbert at parting that he would see his face no more.

So passed at Canterbury Saturday, Sunday, and Monday, the 26th, 27th, and 28th of December. On that same Monday afternoon the four knights arrived at Saltwood. They were expected, for Sir Ranulf with a party of men-at-arms had gone to meet them. There on their arrival they learned the fresh excommunications which had been pronounced against their host and against their friends at the court. The news could only have confirmed whatever resolutions they had formed.

On the morning of the 29th they rode with an escort of horse along the old Roman road to Canterbury. They halted at St. Augustine's Monastery, where they were entertained by the abbot elect, Becket's old enemy, the scandalous Clarembald. They perhaps dined there. At any rate they issued a proclamation bidding the inhabitants remain quiet in their houses in the king's name, and then, with some of Clarembald's armed servants in addition to their own party, they went on to the great gate of the archbishop's palace. Leaving their men outside, the four knights alighted and entered the court. They unbuckled their swords, leaving them at the lodge, and, throwing gowns over their armour, they strode

\* One of his complaints, presented by the Abbot of St. Albans, had been that his clergy were not allowed to leave the realm. There seems to have been no practical difficulty.

across to the door of the hall. Their appearance could hardly have been unexpected. It was now three o'clock in the afternoon. They had been some time in the town, and their arrival could not fail to have been reported. The archbishop's midday meal was over. The servants were dining on the remains, and the usual company of mendicants were waiting for their turn. The archbishop had been again disturbed at daybreak by intimation of danger. He had advised any of his clergy who were afraid to escape to Sandwich; but none of them had left him. He had heard mass as usual. He had received his customary floggings. At dinner, he observed, when some one remarked on his drinking, that a man that had blood to lose needed wine to support him. Afterwards he had retired into an inner room with John of Salisbury, his chaplain Fitzstephen, Edward Grim of Cambridge, who was on a visit to him, and several others, and was now sitting in conversation with them in the declining light of the winter afternoon till the bell should ring for vespers.

The knights were recognized, when they entered the hall, as belonging to the old king's court. The steward invited them to eat. They declined, and desired him to inform the archbishop that they had arrived with a message from the court. This was the first communication which the archbishop had received from Henry since he had used his name so freely to cover acts which, could Henry have anticipated them, would have barred his return to Canterbury for ever. The insincere professions of peace had covered an intention of provoking a rebellion. The truth was now

plain. There was no room any more for excuse or palliation. What course had the king determined on? \*

The knights were introduced. They advanced. The archbishop neither spoke nor looked at them, but continued talking to a monk who was next him. He himself was sitting on a bed. The rest of the party present were on the floor. The knights seated themselves in the same manner, and for a few moments there was silence. Then Becket's black restless eye glanced from one to the other. He slightly noticed Tracy; and Fitzurse said a few unrecorded sentences to him, which ended with 'God help you!' To Becket's friends the words sounded like insolence. They may have meant no more than pity.

Becket's face flushed. Fitzurse went on: 'We bring you the commands of the king beyond the sea; will you hear us in public or in private?' Becket said he cared not. 'In private, then,' said Fitzurse. The monks thought afterwards that Fitzurse had meant to kill the archbishop where he sat. If the knights had entered the palace, thronged as it was with men, with any such intention, they would scarcely have left their swords behind them. The room was cleared, and a short altercation followed, of which nothing is known save that it ended speedily in high words on both sides. Becket called in his clergy again, his lay

\* I have compiled the description of this remarkable scene from the different biographies. They vary slightly, but not much. Grim and Fitzstephen were both present.

servants being excluded, and bade Fitzurse go on. 'Be it so,' Sir Reginald said. 'Listen then to what the king says. When the peace was made, he put aside all his complaints against you. He allowed you to return, as you desired, free to your see. You have now added contempt to your other offences. You have broken the treaty. Your pride has tempted you to defy your lord and master to your own sorrow. You have censured the bishops by whose ministration the prince was crowned. You have pronounced an anathema against the king's ministers, by whose advice he is guided in the management of the Empire. You have made it plain that if you could you would take the prince's crown from him. Your plots and contrivances to attain your ends are notorious to all men. Say, then, will you attend us to the king's presence, and there answer for yourself? For this we are sent.'

The archbishop declared that he had never wished any hurt to the prince. The king had no occasion to be displeased if crowds came about him in the towns and cities after they had been so long deprived of his presence. If he had done any wrong he would make satisfaction, but he protested against being suspected of intentions which had never entered his mind.

Fitzurse did not enter into an altercation with him, but continued: 'The king commands further that you and your clerks repair without delay to the young king's presence, and swear allegiance, and promise to amend your faults.'

The archbishop's temper was rising. 'I will do whatever may be reasonable,' he said; 'but I tell

you plainly the king shall have no oaths from me, nor from any one of my clergy. There has been too much perjury already. I have absolved many, with God's help, who had perjured themselves.\* I will absolve the rest when He permits.'

'I understand you to say that you will not obey,' said Fitzurse; and went on in the same tone: 'The king commands you to absolve the bishops whom you have excommunicated without his permission.'

'The Pope sentenced the bishops,' the archbishop said. 'If you are not pleased, you must go to him. The affair is none of mine.'

Fitzurse said it had been done at his instigation, which he did not deny; but he proceeded to reassert that the king had given him permission. He had complained at the time of the peace of the injury which he had suffered in the coronation, and the king had told him that he might obtain from the Pope any satisfaction for which he liked to ask.

If this was all the consent which the king had given, the pretence of his authority was inexcusable. 'Ay, ay!' said Fitzurse; 'will you make the king out to be a traitor, then? The king gave you leave to excommunicate the bishops when they were acting by his own order! It is more than we can bear to listen to such monstrous accusations.'

\* He was alluding to the bishops who had sworn to the Constitutions of Clarendon.

John of Salisbury tried to check the archbishop's imprudent tongue, and whispered to him to speak to the knights in private; but when the passion was on him, no mule was more ungovernable than Becket. Drawing to a conclusion, Fitzurse said to him: 'Since you refuse to do any one of those things which the king requires of you, his final commands are that you and your clergy shall forthwith depart out of this realm and out of his dominions, never more to return. You have broken the peace, and the king cannot trust you again.'

Becket answered wildly that he would not go—never again would he leave England. Nothing but death should now part him from his church. Stung by the reproach of ill-faith, he poured out the catalogue of his own injuries. He had been promised restoration, and instead of restoration he had been robbed and insulted. Ranulf de Broc had laid an embargo on his wine. Robert de Broc had cut off his mule's tail, and now the knights had come to menace him.

De Morville said that if he had suffered any wrong he had only to appeal to the council, and justice would be done.

Becket did not wish for the council's justice. 'I have complained enough,' he said; 'so many wrongs are daily heaped upon me that I could not find messengers to carry the tale of them. I am refused access to the court. Neither one king nor the other will do me right. I will endure it no more. I will use my own powers as archbishop, and no child of man shall prevent me.'

‘ You will lay the realm under interdict then, and excommunicate the whole of us?’ said Fitzurse.

‘ So God help me,’ said one of the others, ‘ he shall not do that. He has excommunicated over-many already. We have borne too long with him.’

The knights sprang to their feet, twisting their gloves and swinging their arms. The archbishop rose. In the general noise words could no longer be accurately heard. At length the knights moved to leave the room, and, addressing the archbishop’s attendants, said, ‘ In the king’s name we command you to see that this man does not escape.’

‘ Do you think I shall fly, then?’ cried the archbishop. ‘ Neither for the king nor for any living man will I fly. You cannot be more ready to kill me than I am to die. . . . Here you will find me,’ he shouted, following them to the door as they went out, and calling after them. Some of his friends thought that he had asked De Morville to come back and speak quietly with him, but it was not so. He returned to his seat still excited and complaining.

‘ My lord,’ said John of Salisbury to him, ‘ it is strange that you will never be advised. What occasion was there for you to go after these men and exasperate them with your bitter speeches? You would have done better surely by being quiet and giving them a milder answer. They mean no good, and you only commit yourself.’

The archbishop sighed, and said, ‘ I have done with advice. I know what I have before me.’

It must have been now past four o’clock; and unless there were lights the room was almost dark.

Beyond the archbishop's chamber was an ante-room, beyond the ante-room the hall. The knights, passing through the hall into the quadrangle, and thence to the lodge, called their men to arms. The great gate was closed. A mounted guard was stationed outside with orders to allow no one to go out or in. The knights threw off their cloaks and buckled on their swords. This was the work of a few minutes. From the cathedral tower the vesper bell was beginning to sound. The archbishop had seated himself to recover from the agitation of the preceding scene, when a breathless monk rushed in to say that the knights were arming. 'Who cares? Let them arm,' was all that the archbishop said. His clergy were less indifferent. If the archbishop was ready for death, they were not. The door from the hall into the court was closed and barred, and a short respite was thus secured. The intention of the knights, it may be presumed, was to seize the archbishop and carry him off to Saltwood, or to De Morville's castle at Knaresborough, or perhaps to Normandy. Coming back to execute their purpose, they found themselves stopped by the hall door. To burst it open would require time; the ante-room between the hall and the archbishop's apartments opened by an oriel window and an outside stair into a garden. Robert de Broc, who knew the house well, led the way to it in the dusk. The steps were broken, but a ladder was standing against the window, by which the knights mounted, and the crash of the falling casement told the fluttered group about the archbishop that their enemies were upon them. There

was still a moment. The party who entered by the window, instead of turning into the archbishop's room, first went into the hall to open the door and admit their comrades. From the archbishop's room a second passage, little used, opened into the north-west corner of the cloister, and from the cloister there was a way into the north transept of the cathedral. The cry was, 'To the church. To the church.' There at least there would be immediate safety.

The archbishop had told the knights that they would find him where they left him. He did not choose to show fear, or he was afraid, as some thought, of losing his martyrdom. He would not move. The bell had ceased. They reminded him that vespers had begun, and that he ought to be in the cathedral. Half yielding, half resisting, his friends swept him down the passage into the cloister. His cross had been forgotten in the haste. He refused to stir till it was fetched and carried before him as usual. Then only, himself incapable of fear, and rebuking the terror of the rest, he advanced deliberately up the cloister to the church door.\* As he entered the cathedral cries were heard from which it became plain that the knights had broken into the archbishop's room, had found the

\* Those who desire a more particular account of the scene about to be described should refer to Dean Stanley's essay on the murder of Becket, which is printed in his *Antiquities of Canterbury*. Along with an exact knowledge of the localities and a minute acquaintance with the contemporary narratives, Dr. Stanley combines the far more rare power of historical imagination, which enables him to replace out of his materials an exact picture of what took place.

passage, and were following him. Almost immediately Fitzurse, Tracy De Morville, and Le Breton were discerned, in the twilight, coming through the cloister in their armour, with drawn swords, and axes in their left hands. A company of men-at-arms was behind them. In front they were driving before them a frightened flock of monks.

From the middle of the transept in which the archbishop was standing a single pillar rose into the roof. On the eastern side of it opened a chapel of St. Benedict, in which were the tombs of several of the old primates. On the west, running parallel to the nave, was a lady chapel. Behind the pillar, steps led up into the choir, where voices were already singing vespers. A faint light may have been reflected into the transept from the choir tapers, and candles may perhaps have been burning before the altars in the two chapels—of light from without through the windows at that hour there could have been scarcely any. Seeing the knights coming on, the clergy who had entered with the archbishop closed the door and barred it. ‘What do you fear?’ he cried in a clear, loud voice. ‘Out of the way, you cowards! The Church of God must not be made a fortress.’ He stepped back and reopened the door with his own hands, to let in the trembling wretches who had been shut out. They rushed past him, and scattered in the hiding-places of the vast sanctuary, in the crypt, in the galleries, or behind the tombs. All, or almost all, even of his closest friends, William of Canterbury, Benedict, John of Salisbury himself, forsook him to shift for themselves, admitting frankly that they were

unworthy of martyrdom. The archbishop was left alone with his chaplain Fitzstephen, Robert of Merton his old master, and Edward Grim, the stranger from Cambridge—or perhaps with Grim only, who says that he was the only one who stayed, and was the only one certainly who showed any sign of courage. A cry had been raised in the choir that armed men were breaking into the cathedral. The vespers ceased; the few monks assembled left their seats and rushed to the edge of the transept, looking wildly into the darkness.

The archbishop was on the fourth step beyond the central pillar ascending into the choir when the knights came in. The outline of his figure may have been just visible to them, if light fell upon it from candles in the lady chapel. Fitzurse passed to the right of the pillar, De Morville, Tracy, and Le Breton to the left. Robert de Broc and Hugh Mauclerc, an apostate priest, remained at the door by which they entered. A voice cried ‘Where is the traitor? Where is Thomas Becket?’ There was silence; such a name could not be acknowledged. ‘Where is the archbishop?’ Fitzurse shouted. ‘I am here,’ the archbishop replied, descending the steps, and meeting the knights full in the face. ‘What do you want with me? I am not afraid of your swords. I will not do what is unjust.’ The knights closed round him. ‘Absolve the persons whom you have excommunicated,’ they said, ‘and take off the suspensions.’ ‘They have made no satisfaction,’ he answered; ‘I will not.’ ‘Then you shall die as you have deserved,’ they said.

They had not meant to kill him—certainly not at that time and in that place. One of them touched him on the shoulder with the flat of his sword, and hissed in his ears, 'Fly, or you are a dead man.' There was still time; with a few steps he would have been lost in the gloom of the cathedral, and could have concealed himself in any one of a hundred hiding-places. But he was careless of life, and he felt that his time was come. 'I am ready to die,' he said. 'May the Church through my blood obtain peace and liberty! I charge you in the name of God that you hurt no one here but me.' The people from the town were now pouring into the cathedral; De Morville was keeping them back with difficulty at the head of the steps from the choir, and there was danger of a rescue. Fitzurse seized hold of the archbishop, meaning to drag him off as a prisoner. He had been calm so far; his pride rose at the indignity of an arrest. 'Touch me not, Reginald!' he said, wrenching his cloak out of Fitzurse's grasp. 'Off, thou pander, thou!' Le Breton and Fitzurse grasped him again, and tried to force him upon Tracy's back. He grappled with Tracy and flung him to the ground, and then stood with his back against the pillar, Edward Grim supporting him. He reproached Fitzurse for ingratitude for past kindness; Fitzurse whispered to him again to fly. 'I will not fly,' he said, and then Fitzurse swept his sword over him and dashed off his cap. Tracy, rising from the pavement, struck direct at his head. Grim raised his arm and caught the blow. The arm fell broken, and the one friend found faithful sank

back disabled against the wall. The sword, with its remaining force, wounded the archbishop above the forehead, and the blood trickled down his face. Standing firmly with his hands clasped, he bent his neck for the death-stroke, saying in a low voice, 'I am prepared to die for Christ and for His Church.' These were his last words. Tracy again struck him. He fell forward upon his knees and hands. In that position Le Breton dealt him a blow which severed the scalp from the head and broke the sword against the stone, saying, 'Take that for my Lord William.' De Broc or Mauclerc—the needless ferocity was attributed to both of them—strode forward from the cloister door, set his foot on the neck of the dead lion, and spread the brains upon the pavement with his sword's point. 'We may go,' he said; 'the traitor is dead, and will trouble us no more.'

Such was the murder of Becket, the echoes of which are still heard across seven centuries of time, and which, be the final judgment upon it what it may, has its place among the most enduring incidents of English history. Was Becket a martyr, or was he justly executed as a traitor to his sovereign? Even in that supreme moment of terror and wonder, opinions were divided among his own monks. That very night Grim heard one of them say, 'He is no martyr, he is justly served.' Another said, scarcely feeling, perhaps, the meaning of the words, 'He wished to be king and more than king. Let him be king, let him be king.' Whether the cause for which he died was to prevail, or whether the sacrifice had been in vain, hung on the answer which would be given to this

momentous question. In a few days or weeks an answer came in a form to which in that age no rejoinder was possible, and the only uncertainty which remained at Canterbury was whether it was lawful to use the ordinary prayers for the repose of the dead man's soul, or whether, in consequence of the astounding miracles which were instantly worked by his remains, the Pope's judgment ought not to be anticipated, and the archbishop be at once adored as a saint in heaven.

### WILL O' THE MILL

#### THE PLAIN AND THE STARS

The Mill where Will lived with his adopted parents stood in a falling valley between pine-woods and great mountains. Above, hill after hill soared upwards until they soared out of the depth of the hardest timber, and stood naked against the sky. Some way up, a long grey village lay like a seam or a rag of vapour on a wooded hillside; and, when the wind was favourable, the sound of the church bells would drop down, thin and silvery, to Will. Below, the valley grew ever steeper and steeper, and at the same time widened out on either hand; and from an eminence beside the mill it was possible to see its whole length, and away beyond it over a wide plain, where the river turned and shone, and moved on from city to city on its voyage towards the sea. It chanced that over this valley there lay a pass into a neighbouring kingdom, so that, quiet and rural as it was, the road that ran along beside the river was a high thoroughfare between two splendid and powerful societies. All through the summer, travelling carriages came crawling up, or went plunging briskly downwards past the mill; and, as it happened that the other side was very much easier of ascent, the path was not much frequented, except by people

going in one direction; and of all the carriages that Will saw go by, five-sixths were plunging briskly downwards and only one-sixth crawling up. Much more was this the case with foot-passengers. All the light-footed tourists, all the pedlars laden with strange wares, were tending downward like the river that accompanied their path. Nor was this all; for when Will was yet a child a disastrous war arose over a great part of the world. The newspapers were full of defeats and victories, the earth rang with cavalry hoofs, and often for days together and for miles around, the coil of battle terrified good people from their labours in the field. Of all this, nothing was heard for a long time in the valley; but at last one of the commanders pushed an army over the pass by forced marches, and for three days horse and foot, cannon and tumbril, drum and standard, kept pouring downward past the mill. All day the child stood and watched them on their passage—the rhythmical stride, the pale, unshaven faces tanned about the eyes, the discoloured regimentals and the tattered flags, filled him with a sense of weariness, pity, and wonder; and all night long, after he was in bed, he could hear the cannon pounding and the feet trampling, and the great armament sweeping onward and downward past the mill. No one in the valley ever heard the fate of the expedition, for they lay out of the way of gossip in those troublous times; but Will saw one thing plainly, that not a man returned. Whither had they all gone? Whither went all the tourists and pedlars with strange wares? whither all the brisk barouches with servants in the

dicky? whither the water of the stream, ever coursing downward and ever renewed from above? Even the wind blew oftener down the valley, and carried the dead leaves along with it in the fall. It seemed like a great conspiracy of things animate and inanimate; they all went downward, fleetly and gaily downward, and only he, it seemed, remained behind, like a stock upon the way-side. It sometimes made him glad when he noticed how the fishes kept their heads up stream. They, at least, stood faithfully by him, while all else were posting downward to the unknown world.

One evening he asked the miller where the river went.

"It goes down the valley," answered he, "and turns a power of mills—six-score mills, they say, from here to Unterdeck—and it none the wearier after all. And then it goes out into the lowlands, and waters the great corn country, and runs through a sight of fine cities (so they say) where kings live all alone in great palaces, with a sentry walking up and down before the door. And it goes under bridges with stone men upon them, looking down and smiling so curious at the water, and living folk leaning their elbows on the wall and looking over too. And then it goes on and on, and down through marshes and sands, until at last it falls into the sea, where the ships are that bring parrots and tobacco from the Indies. Ay, it has a long trot before it as it goes singing over the weir, bless its heart!"

"And what is the sea?" asked Will.

“ The sea ! ” cried the miller. “ Lord help us all, it is the greatest thing God made ! That is where all the water in the world runs down into a great salt lake. There it lies, as flat as my hand and as innocent-like as a child ; but they do say when the wind blows it gets up into water-mountains bigger than any of ours, and swallows down great ships bigger than our mill, and makes such a roaring that you can hear it milcs away upon the land. There are great fish in it five times bigger than a bull, and one old servant as long as our river and as old as all the world, with whiskers like a man, and a crown of silver on her head.”

Will thought he had never heard anything like this, and he kept on asking question after question about the world that lay away down the river, with all its perils and marvels, until the old miller became quite interested himself, and at last took him by the hand and led him to the hill-top that overlooks the valley and the plain. The sun was near setting, and hung low down in a cloudless sky. Everything was defined and glorified in golden light. Will had never seen so great an expanse of country in his life ; he stood and gazed with all his eyes. He could see the cities, and the woods and fields, and the bright curves of the river, and far away to where the rim of the plain trenched along the shining heavens. An overmastering emotion seized upon the boy, soul and body ; his heart beat so thickly that he could not breathe ; the scene swam before his eyes ; the sun seemed to wheel round and round, and throw off, as it turned, strange shapes which disappeared

with the rapidity of thought, and were succeeded by others. Will covered his face with his hands, and burst into a violent fit of tears; and the poor miller, sadly disappointed and perplexed, saw nothing better for it than to take him up in his arms and carry him home in silence.

From that day forward Will was full of new hopes and longings. Something kept tugging at his heart-strings; the running water carried his desires along with it as he dreamed over its fleeting surface; the wind, as it ran over innumerable tree-tops, hailed him with encouraging words; branches beckoned downward; the open road, as it shouldered round the angles and went turning and vanishing faster and faster down the valley, tortured him with its solicitations. He spent long whiles on the eminence, looking down the rivershed and abroad on the flat lowlands, and watched the clouds that travelled forth upon the sluggish wind and trailed their purple shadows on the plain; or he would linger by the wayside, and follow the carriages with his eyes as they rattled downward by the river. It did not matter what it was; everything that went that way, were it cloud or carriage, bird or brown water in the stream, he felt his heart flow out after it in an ecstasy of longing.

We are told by men of science that all the ventures of mariners on the sea, all that counter-marching of tribes and races that confounds old history with its dust and rumour, sprang from nothing more abstruse than the laws of supply and demand, and a certain natural instinct for cheap rations. To any

one thinking deeply, this will seem a dull and pitiful explanation. The tribes that came swarming out of the North and East, if they were indeed pressed onward from behind by others, were drawn at the same time by the magnetic influence of the South and West. The fame of other lands had reached them; the name of the eternal city rang in their ears; they were not colonists, but pilgrims; they travelled towards wine and gold and sunshine, but their hearts were set on something higher. That divine unrest, that old stinging trouble of humanity that makes all high achievements and all miserable failure, the same that spread wings with Icarus, the same that sent Columbus into the desolate Atlantic, inspired and supported these barbarians on their perilous march. There is one legend which profoundly represents their spirit, of how a flying party of these wanderers encountered a very old man shod with iron. The old man asked them whither they were going; and they answered with one voice: "To the Eternal City!" He looked upon them gravely. "I have sought it," he said, "over the most part of the world. Three such pairs as I now carry on my feet have I worn out upon this pilgrimage, and now the fourth is growing slender underneath my steps. And all this while I have not found the city." And he turned and went his own way alone, leaving them astonished.

And yet this would scarcely parallel the intensity of Will's feeling for the plain. If he could only go far enough out there, he felt as if his eyesight would be purged and clarified, as if his hearing would grow

more delicate, and his very breath would come and go with luxury. He was transplanted and withering where he was; he lay in a strange country and was sick for home. Bit by bit, he pieced together broken notions of the world below; of the river, ever moving and growing until it sailed forth into the majestic ocean; of the cities, full of brisk and beautiful people, playing fountains, bands of music and marble palaces, and lighted up at night from end to end with artificial stars of gold; of the great churches, wise universities, brave armies, and untold money lying stored in vaults; of the high-flying vice that moved in the sunshine, and the stealth and swiftness of midnight murder. I have said he was sick as if for home: the figure halts. He was like some one lying in twilit, formless pre-existence, and stretching out his hands lovingly towards many-coloured, many-sounding life. It was no wonder he was unhappy, he would go and tell the fish: they were made for their life, wished for no more than worms and running water, and a hole below a falling bank; but he was differently designed, full of desires and aspirations, itching at the fingers, lusting with the eyes, whom the whole variegated world could not satisfy with aspects. The true life, the true bright sunshine, lay far out upon the plain. And O! to see this sunlight once before he died! to move with a jocund spirit in a golden land! to hear the trained singers and sweet church bells, and see the holiday gardens! "And O fish!" he would cry, "if you would only turn your noses down stream; you could swim so easily into the fabled waters and see the

vast ships passing over your head like clouds, and hear the great water-hills making music over you all day long!" But the fish kept looking patiently in their own direction, until Will hardly knew whether to laugh or cry.

Hitherto the traffic on the road had passed by Will, like something seen in a picture: he had perhaps exchanged salutations with a tourist, or caught sight of an old gentleman in a travelling-cap at a carriage window; but for the most part it had been a mere symbol, which he contemplated from apart and with something of a superstitious feeling. A time came at last when this was to be changed. The miller, who was a greedy man in his way, and never forwent an opportunity of honest profit, turned the mill-house into a little wayside inn, and, several pieces of good fortune falling in opportunely, built stables and got the position of post master on the road. It now became Will's duty to wait upon people, as they sat to break their fasts in the little harbour at the top of the mill garden; and you may be sure that he kept his ears open, and learned many new things about the outside world as he brought the omelette or the wine. Nay, he would often get into conversation with single guests, and, by adroit questions and polite attention, not only gratify his own curiosity, but win the good-will of the travellers. Many complimented the old couple on their serving-boy; and a professor was eager to take him away with him, and have him properly educated in the plain. The miller and his wife were mightily astonished and even more

pleased. They thought it a very good thing that they should have opened their inn. "You see," the old man would remark, "he has a kind of talent for a publican; he never would have made anything else!" And so life wagged on in the valley, with high satisfaction to all concerned but Will. Every carriage that left the inn-door seemed to take a part of him away with it; and when people jestingly offered him a lift, he could with difficulty command his emotion. Night after night he would dream that he was awakened by flustered servants, and that a splendid equipage waited at the door to carry him down into the plain; night after night; until the dream, which had seemed all jollity to him at first, began to take on a colour of gravity, and the nocturnal summons and waiting equipage occupied a place in his mind as something to be both feared and hoped for.

One day, when Will was about sixteen, a fat young man arrived at sunset to pass the night. He was a contented-looking fellow, with a jolly eye, and carried a knapsack. While dinner was preparing, he sat in the arbour to read a book; but as soon as he had begun to observe Will, the book was laid aside; he was plainly one of those who prefer living people to people made of ink and paper. Will, on his part, although he had not been much interested in the stranger at first sight, soon began to take a great deal of pleasure in his talk, which was full of good-nature and good-sense, and at last conceived a great respect for his character and wisdom. They sat far into the night; and about two in the morning

Will opened his heart to the young man, and told him how he longed to leave the valley and what bright hopes he had connected with the cities of the plain. The young man whistled, and then broke into a smile.

“ My young friend,” he remarked, “ you are a very curious little fellow, to be sure, and wish a great many things which you will never get. Why, you would feel quite ashamed if you knew how the little fellows in these fairy cities of yours are all after the same sort of nonsense, and keep breaking their hearts to get up into the mountains. And let me tell you, those who go down into the plains are a very short while there before they wish themselves heartily back again. The air is not so light nor so pure; nor is the sun any brighter. As for the beautiful men and women, you would see many of them in rags and many of them deformed with horrible disorders; and a city is so hard a place for people who are poor and sensitive that many choose to die by their own hand.”

“ You must think me very simple,” answered Will. “ Although I have never been out of this valley, believe me, I have used my eyes. I know how one thing lives on another; for instance, how the fish hangs in the eddy to catch his fellows; and the shepherd, who makes so pretty a picture carrying home the lamb, is only carrying it home for dinner. I do not expect to find all things right in your cities. That is not what troubles me; it might have been that once upon a time; but although I have lived here always, I have asked

many questions and learned a great deal in these last years, and certainly enough to cure me of my old fancies. But you would not have me die like a dog and not see all that is to be seen, and do all that a man can do, let it be good or evil? you would not have me spend all my days between this road here and the river, and not so much as make a motion to be up and live my life?—I would rather die out of hand," he cried, "than linger on as I am doing."

"Thousands of people," said the young man, "live and die like you, and are none the less happy."

"Ah!" said Will, "if there are thousands who would like, why should not one of them have my place?"

It was quite dark; there was a hanging lamp in the arbour which lit up the table and the faces of the speakers; and along the arch, the leaves upon the trellis stood out illuminated against the night sky, a pattern of transparent green upon a dusky purple. The fat young man rose, and, taking Will by the arm, led him out under the open heavens.

"Did you ever look at the stars?" he asked, pointing upwards.

"Often and often," answered Will

"And do you know what they are?"

"I have fancied many things."

"They are worlds like ours," said the young man. "Some of them less; many of them a million times greater; and some of the least sparkles that you see are not only worlds, but whole clusters of worlds turning about each other in

the midst of space. We do not know what there may be in any of them; perhaps the answer to all our difficulties or the cure of all our sufferings: and yet we can never reach them; not all the skill of the craftiest of men can fit out a ship for the nearest of these our neighbours, nor would the life of the most aged suffice for such a journey. When a great battle has been lost or a dear friend is dead, when we are hipped or in high spirits, there they are unweariedly shining overhead. We may stand down here, a whole army of us together, and shout until we break our hearts, and not a whisper reaches them. We may climb the highest mountain, and we are no nearer them. All we can do is to stand down here in the garden and take off our hats; the starshine lights upon our heads, and where mine is a little bald, I dare say you can see it glisten in the darkness. The mountain and the mouse. That is like to be all we shall ever have to do with Arcturus or Aldebaran. Can you apply a parable?" he added, laying his hand upon Will's shoulder. "It is not the same thing as a reason, but usually vastly more convincing."

Will hung his head a little, and then raised it once more to heaven. The stars seemed to expand and emit a sharper brilliancy; and as he kept turning his eyes higher and higher, they seemed to increase in multitude under his gaze.

"I see," he said, turning to the young man. "We are in a rat-trap."

"Something of that size. Did you ever see a squirrel turning in a cage? and another squirrel

sitting philosophically over his nuts? I needn't ask you which of them looked more of a fool."

### THE PARSON'S MARJORY

After some years the old people died, both in one winter, very carefully tended by their adopted son, and very quietly mourned when they were gone. People who had heard of his roving fancies supposed he would hasten to sell the property, and go down the river to push his fortunes. But there was never any sign of such an intention on the part of Will. On the contrary, he had the inn set on a better footing, and hired a couple of servants to assist him in carrying it on; and there he settled down, a kind, talkative, inscrutable young man, six feet three in his stockings, with an iron constitution and a friendly voice. He soon began to take rank in the district as a bit of an oddity; it was not much to be wondered at from the first, for he was always full of notions, and kept calling the plainest common sense in question; but what most raised the report upon him was the odd circumstance of his courtship with the parson's Marjory.

The parson's Marjory was a lass about nineteen, when Will would be about thirty; well enough looking, and much better educated than any other girl in that part of the country, as became her parentage. She held her head very high, and had already refused several offers of marriage with a grand air, which had got her hard names among the neighbours. For all that she was a good girl, and one that would have made any man well contented.

Will had never seen much of her; for, although the church and parsonage were only two miles from his own door, he was never known to go there but on Sundays. It chanced, however, that the parsonage fell into disrepair and had to be dismantled; and the parson and his daughter took lodgings for a month or so, on very much reduced terms, at Will's inn. Now, what with the inn, and the mill, and the old miller's savings, our friend was a man of substance; and, besides that, he had a name for good temper and shrewdness which make a capital portion in marriage; and so it was currently gossiped, among their ill-wishers, that the parson and his daughter had not chosen their temporary lodging with their eyes shut. Will was about the last man in the world to be cajoled or frightened into marriage. You had only to look into his eyes, limpid and still like pools of water, and yet with a sort of clear light that seemed to come from within, and you would understand at once that here was one who knew his own mind, and would stand to it immovably. Marjory herself was no weakling by her looks, with strong, steady eyes and a resolute and quiet bearing. It might be a question whether she was not Will's match in steadfastness, after all, or which of them would rule the roost in marriage. But Marjory had never given it a thought, and accompanied her father with the most unshaken innocence and unconcern.

The season was still so early that Will's customers were few and far between; but the lilacs were already flowering, and the weather was so mild that the party took dinner under the trellis, with the noise

of the river in their ears and the woods ringing about them with the songs of birds. Will soon began to take a particular pleasure in these dinners. The parson was rather a dull companion, with a habit of dozing at table; but nothing rude or cruel ever fell from his lips. And as for the parson's daughter, she suited her surroundings with the best grace imaginable; and whatever she said seemed so pat and pretty that Will conceived a great idea of her talents. He could see her face, as she leaned forward, against a background of rising pinewoods; her eyes shone peaceably; the light lay around her hair like a kerchief; something that was hardly a smile rippled her pale cheeks, and Will could not contain himself from gazing on her in an agreeable dismay. She looked, even in her quietest moments, so complete in herself, and so quick with life down to her finger-tips and the very skirts of her dress, that the remainder of created things became no more than a blot by comparison; and if Will glanced away from her to her surroundings the trees looked inanimate and senseless, the clouds hung in heaven like dead things, and even the mountain-tops were disenchanted. The whole valley could not compare in looks with this one girl.

Will was always observant in the society of his fellow-creatures; but his observation became almost painfully eager in the case of Marjory. He listened to all she uttered, and read her eyes, at the same time, for the unspoken commentary. Many kind, simple, and sincere speeches found an echo in his heart. He became conscious of a soul beautifully poised upon itself, nothing doubting, nothing desiring, clothed in

peace. It was not possible to separate her thoughts from her appearance. The turn of her wrist, the still sound of her voice, the light in her eyes, the lines of her body, fell in tune with her grave and gentle words, like the accompaniment that sustains and harmonises the voice of the singer. Her influence was one thing, not to be divided or discussed, only to be felt with gratitude and joy. To Will, her presence recalled something of his childhood, and the thought of her took its place in his mind beside that of dawn, of running water, and of the earliest violets and lilacs. It is the property of things seen for the first time, or for the first time after long, like the flowers in spring, to reawaken in us the sharp edge of sense and that impression of mystic strangeness which otherwise passes out of life with the coming of years; but the sight of a loved face is what renews a man's character from the fountain upwards.

One day after dinner Will took a stroll among the firs; a grave beatitude possessed him from top to toe, and he kept smiling to himself and the landscape as he went. The river ran between the stepping-stones with a pretty wimple; a bird sang loudly in the wood; the hill-tops looked immeasurably high, and as he glanced at them from time to time, seemed to contemplate his movements with a beneficent but awful curiosity. His way took him to the eminence which overlooked the plain; and there he sat down upon a stone, and fell into deep and pleasant thought. The plain lay abroad with its cities and silver river; everything was asleep except a great eddy of birds which kept rising and falling and going round and

round in the blue air. He repeated Marjory's name aloud, and the sound of it gratified his ear. He shut his eyes, and her image sprang up before him, quietly luminous and attended with good thoughts. The river might run for ever; the birds fly higher and higher till they touched the stars. He saw it was empty bustle after all; for here, without stirring a foot, waiting patiently in his own narrow valley, he also had attained the better sunlight.

The next day Will made a sort of declaration across the dinner-table, while the parson was filling his pipe.

"Miss Marjory," he said, "I never knew any one I like so well as you. I am mostly a cold, unkindly sort of man; not from want of heart, but out of strangeness in my way of thinking; and people seem far away from me. 'Tis as if there were a circle round me, which kept every one out but you; I can hear the others talking and laughing; but you come quite close.—May be this is disagreeable to you?" he asked.

Marjory made no answer.

"Speak up, girl," said the parson.

"Nay, now," returned Will, "I wouldn't press her, parson. I feel tongue-tied myself, who am not used to it; and she's a woman, and little more than a child, when all is said. But for my part, as far as I can understand what people mean by it, I fancy I must be what they call in love. I do not wish to be held as committing myself; for I may be wrong; but that is how I believe things are with me. And if Miss Marjory should feel any otherwise on her part,

mayhap she would be so kind as shake her head."

Marjory was silent and gave no sign that she had heard.

"How is that, parson?" asked Will.

"The girl must speak," replied the parson, laying down his pipe. "Here's our neighbour who says he loves you, Madge. Do you love him, ay or no?"

"I think I do," said Marjory, faintly.

"Well, then, that's all that could be wished!" cried Will heartily. And he took her hand across the table, and held it a moment in both of his with great satisfaction.

"You must marry," observed the parson, replacing his pipe in his mouth.

"Is that the right thing to do, think you?" demanded Will.

"It is indispensable," said the parson.

"Very well," replied the wooer.

Two or three days passed away with great delight to Will, although a bystander might scarce have found it out. He continued to take his meals opposite Marjory, and to talk with her and gaze upon her in her father's presence; but he made no attempt to see her alone, nor in any other way changed his conduct towards her from what it had been since the beginning. Perhaps the girl was a little disappointed, and perhaps not unjustly; and yet if it had been enough to be always in the thoughts of another person, and so pervade and alter his whole life, she might have been thoroughly contented. For she was never out of Will's mind for an instant. He sat

over the stream, and watched the dust of the eddy, and the poised fish, and straining weeds; he wandered out alone into the purple even, with all the black-birds piping round him in the wood; he rose early in the morning; and saw the sky turn from grey to gold, and the light leap upon the hill-tops; and all the while he kept wondering if he had never seen such things before, or how it was that they should look so different now. The sound of his own mill-wheel, or of the wind among the trees, confounded and charmed his heart. The most enchanting thoughts presented themselves unbidden in his mind. He was so happy that he could not sleep at night, and so restless that he could hardly sit still out of her company. And yet it seemed as if he avoided her rather than sought her out.

One day, as he was coming home from a ramble, Will found Marjory in the garden picking flowers, and, as he came up with her, slackened his pace and continued walking by her side.

“ You like flowers? ” he said.

“ Indeed I love them dearly,” she replied.  
“ Do you? ”

“ Why, no,” said he, “ not so much. They are a very small affair, when all is done. I can fancy people caring for them greatly, but not doing as you are just now.”

“ How?” she asked, pausing and looking up at him.

“ Plucking them,” said he. “ They are a deal better off where they are, and look a deal prettier, if you go to that.”

"I wish to have them for my own," she answered, "to carry them near my heart, and keep them in my room. They tempt me when they grow here; they seem to say, 'Come and do something with us'; but once I have cut them and put them by, the charm is laid, and I can look at them with quite an easy heart."

"You wish to possess them," replied Will, "in order to think no more about them. It's a bit like killing the goose with the golden eggs. It's a bit like what I wished to do when I was a boy. Because I had a fancy for looking out over the plain, I wished to go down there—where I couldn't look out over it any longer. Was not that fine reasoning? Dear, dear, if they only thought of it, all the world would do like me; and you would let your flowers alone, just as I stay up here in the mountains." Suddenly he broke off sharp. "By the Lord!" he cried. And when she asked him what was wrong, he turned the question off, and walked away into the house with rather a humorous expression of face.

He was silent at table; and after the night had fallen and the stars had come out overhead, he walked up and down for hours in the courtyard and garden with an uneven pace. There was still a light in the window of Marjory's room: one little oblong patch of orange in a world of dark blue hills and silver star-light. Will's mind ran a great deal on the window; but his thoughts were not very lover-like. "There she is in her room," he thought, "and there are the stars overhead—a blessing upon both!" Both were good influences in his life; both

soothed and braced him in his profound contentment with the world. And what more should he desire with either? The fat young man and his counsels were so present to his mind, that he threw back his head, and, putting his hands before his mouth, shouted aloud to the populous heavens. Whether from the position of his head or the sudden strain of the exertion, he seemed to see a momentary shock among the stars, and a diffusion of frosty light pass from one to another along the sky. At the same instant, a corner of the blind was lifted up and lowered again at once. He laughed a loud ho-ho! "One and another!" thought Will. "The stars tremble, and the blind goes up. Why, before Heaven, what a great magician I must be! Now if I were only a fool, should not I be in a pretty way?" And he went off to bed, chuckling to himself: "If I were only a fool!"

The next morning, pretty early, he saw her once more in the garden, and sought her out.

"I have been thinking about getting married," he began abruptly; "and, after having turned it all over, I have made up my mind it's not worth while."

She turned upon him for a single moment; but his radiant, kindly appearance would, under the circumstances, have disconcerted an angel, and she looked down again upon the ground in silence. He could see her tremble.

"I hope you don't mind," he went on a little taken aback. "You ought not. I have turned it all over, and upon my soul, there's nothing in it."

We should never be one whit nearer than we are just now, and, if I am a wise man, nothing like so happy."

"It is unnecessary to go round about with me," she said. "I very well remember that you refused to commit yourself; and now that I see you were mistaken, and in reality have never cared for me, I can only feel sad that I have been so far misled."

"I ask your pardon," said Will stoutly; "you do not understand my meaning. As to whether I have ever loved you or not, I must leave that to others. But for one thing, my feeling is not changed; and for another, you may make it your boast that you have made my whole life and character something different from what they were. I mean what I say; no less. I do not think getting married is worth while. I would rather you went on living with your father, so that I could walk over and see you once, or may be twice a week, as people go to church, and then we should both be all the happier between whiles. That's my notion. But I'll marry you if you will," he added.

"Do you know that you are insulting me?" she broke out.

"Not I, Marjory," said he; "if there is anything in a clear conscience, not I. I offer all my heart's best affections; you can take it or want it, though I suspect it's beyond either your power or mine to change what has once been done, and set me fancy-free. I'll marry you, if you like; but I tell you again and again, it's not worth while, and we

had best stay friends. Though I am a quiet man I have noticed a heap of things in my life. Trust in me, and take things as I propose; or, if you don't like that, say the word, and I'll marry you out of hand."

There was a considerable pause, and Will, who began to feel uneasy, began to grow angry in consequence.

"It seems you are too proud to say your mind," he said. "Believe me, that's a pity. A clean shift makes simple living. Can a man be more downright or honourable to a woman than I have been? I have said my say, and given you your choice. Do you want me to marry you? or will you take my friendship, as I think best? or have you had enough of me for good? Speak out for the dear God's sake! You know your father told you a girl should speak her mind in these affairs."

She seemed to recover herself at that, turned without a word, walked rapidly through the garden, and disappeared into the house, leaving Will in some confusion as to the result. He walked up and down the garden, whistling softly to himself. Sometimes he stopped and contemplated the sky and hill-tops; sometimes he went down to the tail of the weir and sat there, looking foolishly in the water. All this dubiety and perturbation was so foreign to his nature and the life which he had resolutely chosen for himself, that he began to regret Marjory's arrival. "After all," he thought, "I was as happy as a man need be. I could come down here and

watch my fishes all day long if I wanted: I was as settled and contented as my old mill."

Marjory came down to dinner, looking very trim and quiet; and no sooner were all three at table than she made her father a speech, with her eyes fixed upon her plate, but showing no other sign of embarrassment or distress.

"Father," she began, "Mr. Will and I have been talking things over. We see that we have each made a mistake about our feelings, and he has agreed, at my request, to give up all idea of marriage, and be no more than my very good friend, as in the past. You see, there is no shadow of a quarrel, and indeed I hope we shall see a great deal of him in the future, for his visits will always be welcome in our house. Of course, father, you will know best, but perhaps we should do better to leave Mr. Will's house for the present. I believe, after what has passed, we should hardly be agreeable inmates for some days."

Will, who had commanded himself with difficulty from the first, broke out upon this into an inarticulate noise, and raised one hand with an appearance of real dismay, as if he were about to interfere and contradict. But she checked him at once, looking up at him with a swift glance and an angry flush upon her cheek.

"You will perhaps have the good grace," she said, "to let me explain these matters for myself."

Will was put entirely out of countenance by her expression and the ring of her voice. He held his peace, concluding that there were some things about

this girl beyond his comprehension—in which he was exactly right.

The poor parson was quite crestfallen. He tried to prove that this was no more than a true lovers' tiff, which would pass off before night; and when he was dislodged from that position, he went on to argue that where there was no quarrel there could be no call for a separation; for the good man liked both his entertainment and his host. It was curious to see how the girl managed them, saying little all the time, and that very quietly, and yet twisting them round her finger and insensibly leading them wherever she would by feminine tact and generalship. It scarcely seemed to have been her doing—it seemed as if things had merely so fallen out—that she and her father took their departure that same afternoon in a farm-cart, and went farther down the valley, to wait, until their own house was ready for them, in another hamlet. But Will had been observing closely, and was well aware of her dexterity and resolution. When he found himself alone he had a great many curious matters to turn over in his mind. He was very sad and solitary, to begin with. All the interest had gone out of his life, and he might look up at the stars as long as he pleased, he somehow failed to find support or consolation. And then he was in such a turmoil of spirit about Marjory. He had been puzzled and irritated at her behaviour, and yet he could not keep himself from admiring it. He thought he recognized a fine, perverse angel in that still soul which he had never hitherto suspected; and though he saw it was an influence that would fit but

ill with his own life of artificial calm, he could not keep himself from ardently desiring to possess it. Like a man who has lived among shadows and now meets the sun, he was both pained and delighted.

As the days went forward he passed from one extreme to another; now pluming himself on the strength of his determination, now despising his timid and silly caution. The former was, perhaps, the true thought of his heart, and represented the regular tenor of the man's reflections; but the latter burst forth from time to time with an unruly violence, and then he would forget all consideration, and go up and down his house and garden or walk among the fir-woods like one who is beside himself with remorse. To equable, steady-minded Will, this state of matters was intolerable; and he determined, at whatever cost, to bring it to an end. So, one warm summer afternoon he put on his best clothes, took a thorn switch in his hand, and set out down the valley by the river. As soon as he had taken his determination, he had regained at a bound his customary peace of heart, and he enjoyed the bright weather and the variety of the scene without any admixture of alarm or unpleasant eagerness. It was nearly the same to him how the matter turned out. If she accepted him he would have to marry her this time, which perhaps was all for the best. If she refused him, he would have done his utmost, and might follow his own way in the future with an untroubled conscience. He hoped, on the whole, she would refuse him; and then, again, as he saw the brown roof which sheltered her, peeping through

some willows at an angle of the stream, he was half inclined to reverse the wish, and more than half ashamed of himself for this infirmity of purpose.

Marjory seemed glad to see him, and gave him her hand without affectation or delay.

"I have been thinking about this marriage," he began.

"So have I," she answered. "And I respect you more and more for a very wise man. You understood me better than I understood myself; and I am now quite certain that things are all for the best as they are."

"At the same time—" ventured Will.

"You must be tired," she interrupted. "Take a seat and let me fetch you a glass of wine. The afternoon is so warm; and I wish you not to be displeased with your visit. You must come quite often; once a week, if you can spare the time; I am always so glad to see my friends."

"Oh, very well," thought Will to himself. "It appears I was right after all." And he paid a very agreeable visit, walked home again in capital spirits, and gave himself no further concern about the matter.

For nearly three years Will and Marjory continued on these terms, seeing each other once or twice a week without any word of love between them; and for all that time I believe Will was nearly as happy as a man can be. He rather stinted himself the pleasure of seeing her; and he would often walk half-way over to the parsonage, and then

back again, as if to whet his appetite. Indeed, there was one corner of the road, whence he could see the churchspire wedged into a crevice of the valley between sloping fir-woods, with a triangular snatch of plain by way of background, which he greatly affected as a place to sit and moralise in before returning homewards; and the peasants got so much into the habit of finding him there in the twilight that they gave it the name of "Will o' the Mill's Corner."

At the end of the three years Marjory played him a sad trick by suddenly marrying somebody else. Will kept his countenance bravely, and merely remarked that, for as little as he knew of women, he had acted very prudently in not marrying her himself three years before. She plainly knew very little of her own mind, and, in spite of a deceptive manner, was as fickle and flighty as the rest of them. He had to congratulate himself on an escape, he said, and would take a higher opinion of his own wisdom in consequence. But at heart, he was reasonably displeased, moped a good deal for a month or two, and fell away in flesh, to the astonishment of his serving lads.

It was perhaps a year after this marriage that Will was awakened late one night by the sound of a horse galloping on the road, followed by precipitate knocking at the inn-door. He opened his window and saw a farm servant, mounted and holding a led horse by the bridle, who told him to make what haste he could and go along with him; for Marjory was dying, and had sent urgently to fetch him to her

bedside. Will was no horseman, and made so little speed upon the way that the poor young wife was very near her end before he arrived. But they had some minutes' talk in private, and he was present and wept very bitterly while she breathed her last.

### DEATH

Year after year went away into nothing, with great explosions and outcries in the cities on the plain: red revolt springing up and being suppressed in blood, battle swaying hither and thither, patient astronomers in observatory towers picking out and christening new stars, plays being performed in lighted theatres, people being carried into hospitals on stretchers, and all the usual turmoil and agitation of men's lives in crowded centres. Up in Will's valley only the wind and seasons made an epoch; the fish hung in the swift stream, the birds circled overhead, the pine-tops rustled underneath the stars, the tall hills stood over all; and Will went to and fro, minding his wayside inn, until the snow began to thicken on his head. His heart was young and vigorous; and if his pulses kept a sober time, they still beat strong and steady in his wrists. He carried a ruddy stain on either cheek, like a ripe apple; he stooped a little, but his step was still firm; and his sinewy hands were reached out to all men with a friendly pressure. His face was covered with those wrinkles which are got in open air, and which, rightly looked at, are no more than a sort of

permanent sunburning; such wrinkles heighten the stupidity of stupid faces; but to a person like Will, with his clear eyes and smiling mouth, only give another charm by testifying to a simple and easy life. His talk was full of wise sayings. He had a taste for other people; and other people had a taste for him. When the valley was full of tourists in the season, there were merry nights in Will's arbour; and his views, which seemed whimsical to his neighbours, were often enough admired by learned people out of towns and colleges. Indeed, he had a very noble old age, and grew daily better known; so that his fame was heard of in the cities of the plain; and young men who had been summer travellers spoke together in *cafés* of Will o' the Mill and his rough philosophy. Many and many an invitation, you may be sure, he had; but nothing could tempt him from his upland valley. He would shake his head and smile over his tobacco-pipe with a deal of meaning. "You come too late," he would answer. "I am a dead man now: I have lived and died already. Fifty years ago you would have brought my heart into my mouth; and now you do not even tempt me. But that is the object of long living, that man should cease to care about life." And again: "There is only one difference between a long life and a good dinner: that, in the dinner, the sweets come last." Or once more: "When I was a boy, I was a bit puzzled, and hardly knew whether it was myself or the world that was curious and worth looking into. Now I know it is myself, and stick to that."

He never showed any symptom of frailty, but kept stalwart and firm to the last; but they say he grew less talkative towards the end, and would listen to other people by the hour in an amused and sympathetic silence. Only, when he did speak, it was more to the point and more charged with old experience. He drank a bottle of wine gladly; above all, at sunset on the hill-top or quite late at night under the stars in the harbour. The sight of something attractive and unattainable seasoned his enjoyment, he would say; and he professed he had lived long enough to admire a candle all the more when he could compare it with a planet.

One night, in his seventy-second year, he awoke in bed, in such uneasiness of body and mind that he arose and dressed himself, and went out to meditate in the harbour. It was pitch dark, without a star; the river was swollen, and the wet woods and meadows loaded the air with perfume. It had thundered during the day, and it promised more thunder for the morrow. A murky, stifling night for a man of seventy-two! Whether it was the weather or the wakefulness, or some little touch of fever in his old limbs, Will's mind was besieged by tumultuous and crying memories. His boyhood, the night with the fat young man, the death of his adopted parents, the summer days with Marjory, and many of those small circumstances, which seem nothing to another, and are yet the very gist of a man's own life to himself—things seen, words heard, books misconstrued—arose from their forgotten corners and usurped his attention. The dead themselves were with him,

not merely taking part in this thin show of memory that defiled before his brain, but revisiting his bodily senses as they do in profound and vivid dreams. The fat young man leaned his elbows on the table opposite; Marjory came and went with an apronful of flowers between the garden and the arbour; he could hear the old parson knocking out his pipe or blowing his resonant nose. The tide of his consciousness ebbed and flowed; he was sometimes half asleep and drowned in his recollections of the past and sometimes he was broad awake, wondering at himself. But about the middle of the night he was startled by the voice of the dead miller calling to him out of the house as he used to do on the arrival of custom. The hallucination was so perfect that Will sprang from his seat and stood listening for the summons to be repeated, and as he listened he became conscious of another noise besides the brawling of the river and the ringing in his feverish ears. It was like the stir of horses and the creaking of harness, as though a carriage with an impatient team had been brought up upon the road before the courtyard gate. At such an hour, upon this rough and dangerous pass, the supposition was no better than absurd; and Will dismissed it from his mind, and resumed his seat upon the arbour chair; and sleep closed over him again like running water. He was once again awakened by the dead miller's call, thinner and more spectral than before; and once again he heard the noise of an equipage upon the road. And so thrice and four times, the same dream, or the same fancy, presented itself to his senses: until at

length smiling to himself as when one humours a nervous child, he proceeded towards the gate to set his uncertainty at rest.

From the arbour to the gate was no great distance, and yet it took Will some time; it seemed as if the dead thickened around him in the court, and crossed his path at every step. For, first, he was suddenly surprised by an overpowering sweetness of heliotropes; it was as if his garden had been planted with this flower from end to end, and the hot, damp night had drawn forth all their perfumes in a breath. Now the heliotrope had been Marjory's favourite flower, and since her death not one of them had ever been planted in Will's ground.

"I must be going crazy," he thought. "Poor Marjory and her heliotropes!"

And with that he raised his eyes towards the window that had once been hers. If he had been bewildered before, he was now almost terrified; for there was a light in the room; the window was an orange oblong as of yore; and the corner of the blind was lifted and let fall as on the night when he stood and shouted to the stars in his perplexity. The illusion only endured an instant; but it left him somewhat unmanned, rubbing his eyes and staring at the outline of the house and the black night behind it. While he thus stood, and it seemed as if he must have stood there quite a long time, there came a renewal of the noises on the road: and he turned in time to meet a stranger, who was advancing to meet him across the court. There was something like the outline of a great carriage discernible on the

road behind the stranger, and, above that, a few black pinetops, like so many plumes.

"Master Will?" asked the new-comer, in brief military fashion.

"That same, sir," answered Will. "Can I do anything to serve you?"

"I have heard you much spoken of, Master Will," returned the other; "much spoken of, and well. And though I have both hands full of business, I wish to drink a bottle of wine with you in your harbour. Before I go, I shall introduce myself."

Will led the way to the trellis, and got a lamp lighted and a bottle uncorked. He was not altogether unused to such complimentary interviews, and hoped little enough for this one, being schooled by many disappointments. A sort of cloud had settled on his wits and prevented him from remembering the strangeness of the hour. He moved like a person in his sleep; and it seemed as if the lamp caught fire and the bottle came uncorked with the facility of thought. Still, he had some curiosity about the appearance of his visitor, and tried in vain to turn the light into his face; either he handled the lamp clumsily, or there was a dimness over his eyes; but he could make out little more than a shadow at table with him. He stared and stared at this shadow, as he wiped out the glasses, and began to feel cold and strange about the heart. The silence weighed upon him, for he could hear nothing now, not even the river, but the drumming of his own arteries in his ears.

"Here's to you," said the stranger roughly.

"Here is my service, sir," replied Will, sipping his wine, which somehow tasted oddly.

"I understand you are a very positive fellow," pursued the stranger.

Will made answer with a smile of some satisfaction and a little nod.

"So am I," continued the other; "and it is the delight of my heart to tramp on people's corns. I will have nobody positive but myself; not one. I have crossed the whims, in my time, of kings and generals and great artists. And what would you say," he went on, "if I had come up here on purpose to cross yours?"

Will had it on his tongue to make a sharp rejoinder; but the politeness of an old innkeeper prevailed; and he held his peace and made answer with a civil gesture of the hand.

"I have," said the stranger. "And if I did not hold you in a particular esteem, I should make no words about the matter. It appears you pride yourself on staying where you are. You mean to stick by your inn. Now I mean you shall come for a turn with me in my barouche; and before this bottle's empty, so you shall."

"That would be an odd thing, to be sure," replied Will, with a chuckle. "Why, sir, I have grown here like an old oak-tree; the devil himself could hardly root me up; and for all I perceive you are a very entertaining old gentleman, I would wager you another bottle you lose pains with me."

The dimness of Will's eyesight had been increasing all this while, but he was somehow conscious of a sharp and chilling scrutiny which irritated and yet overmastered him.

"You need not think," he broke out suddenly, in an explosive, febrile manner that startled and alarmed himself, "that I am a stay-at-home, because I fear anything under God. God knows I am tired enough of it all, and when the time comes for a longer journey than ever you dream of, I reckon I shall find myself prepared."

The stranger emptied his glass, and pushed it away from him. He looked down for a little, and then, leaning over the table, tapped Will three times upon the forearm with a single finger. "The time has come!" he said solemnly.

An ugly thrill spread from the spot he touched. The tones of his voice were dull and startling, and echoed strangely in Will's heart.

"I beg your pardon," he said, with some composure. "What do you mean?"

"Look at me, and you will find your eyesight swim. Raise your hand; it is dead-heavy. This is your last bottle of wine, Master Will, and your last night upon the earth."

"You are a doctor?" quavered Will.

"The best that ever was," replied the other; "for I cure both mind and body with the same prescription. I take away all pain and I forgive all sins; and where my patients have gone wrong in life, I smooth out all complications and set them free again upon their feet."

"I have no need of you," said Will.

"A time comes for all men, Master Will," replied the doctor, "when the helm is taken out of their hands. For you, because you were prudent and quiet, it has been long of coming, and you have had long to discipline yourself for its reception. You have seen what is to be seen about your mill; you have sat close all your days like a hare in its form; but now that is at an end; and," added the doctor, getting on his feet, "you must arise and come with me."

"You are a strange physician," said Will, looking steadfastly upon his guest.

"I am a natural law," he replied, "and people call me Death."

"Why did you not tell me so at first?" cried Will. "I have been waiting for you these many years. Give me your hand, and welcome."

"Lean upon my arm," said the stranger, "for already your strength abates. Lean on me heavily as you need; for though I am old, I am very strong. It is but three steps to my carriage, and there all your trouble ends. Why, Will," he added, "I have been yearning for you as if you were my own son; and of all the men that ever I came for in my long days, I have come for you most gladly. I am caustic, and sometimes offend people at first sight; but I am a good friend at heart to such as you."

"Since Marjory was taken," returned Will, "I declare before God you were the only friend I had to look for."

So the pair went arm-in-arm across the courtyard.

One of the servants awoke about this time and heard the noise of horses pawing before he dropped asleep again; all down the valley that night there was a rushing as of a smooth and steady wind descending towards the plain; and when the world rose next morning, sure enough Will o' the Mill had gone at last upon his travels.

*Robert Louis Stevenson.*

---

## THE ILIAD

Thus they throughout the city, scared like fawns, were cooling their sweat and drinking and slaking their thirst, leaning on the fair battlements, while the Achaians drew near the wall, setting shields to shoulders. But Hector deadly fate bound to abide in his place, in front of Ilios and the Skaian gates. Then to the son of Peleus spake Phoebus Apollo: "Wherefore, son of Peleus, pursuest thou me with swift feet, thyself being mortal and I a deathless god? Thou hast not even yet known me, that I am a god, but strivest vehemently. Truly thou regardest not thy task among the affliction of the Trojans whom thou affrightedst, who now are gathered into the city, while thou hast wandered hither. Me thou wilt never slay, for I am not subject unto death."

Then mightily moved spake unto him Achilles fleet of foot: "Thou hast baulked me, Far-darter, most mischievous of all the gods, in that thou hast turned me hither from the wall: else should full many yet have bitten the dust or ever within Ilios had they come. Now hast thou robbed me of great renown, and lightly hast saved them, because thou hadst no vengeance to fear thereafter. Verily I would avenge me on thee, had I but the power."

Thus saying toward the city he was gone in pride of heart, rushing like some victorious horse in a

chariot, that runneth lightly at full speed over the plain; so swiftly plied Achilles his feet and knees. Him the old man Priam first beheld as he sped across the plain, blazing as the star that cometh forth at harvest-time, and plain seen his rays shine forth amid the host of stars in the darkness of night, the star whose name men call Orion's Dog. Brightest of all is he, yet for an evil sign is he set, and bringeth much fever upon hapless ruen. Even so on Achilles' breast the bronze gleamed as he ran. And the old man cried aloud and beat upon his head with his hands, raising them on high, and with a cry called aloud beseeching his dear son; for he before the gates was standing, all hot for battle with Achilles. And the old man spake piteously unto him, stretching forth his hand: "Hector, beloved son, I pray thee await not this man alone with none beside thee, lest thou quickly meet thy doom, slain by the son of Peleus, since he is mightier far, a merciless man. Would the gods loved him even as do I! then quickly would dogs and vultures devour him on the field—thereby would cruel pain go from my heart—the man who hath bereft me of many valiant sons, slaying them and selling them captive into far-off isles. Ay even now twain of my children, Lykaon and Polydoros, I cannot see among the Trojans that throng into the fastness, sons whom Laothoë bare me, a princess among women. If they be yet alive amid the enemy's host, then will we ransom them with bronze and gold, for there is store within, for much goods gave the old man famous Altes to his child. If they be dead, then even in the house of Hades

shall they be a sorrow to my soul and to their mother, even to us who gave them birth, but to the rest of the folk a briefer sorrow, if but thou die not by Achilles' hand. Nay, come within the wall, my child, that thou preserve the men and women of Troy, neither give great triumph to the son of Peleus, and be thyself bereft of sweet life. Have compassion also on me, the helpless one, who still can feel, ill-fated; whom the father, Kronos's son, will bring to nought by a grievous doom in the path of old age, having seen full many ills, his sons perishing and his daughters carried away captive, and his chambers laid waste and infant children hurled to the ground in terrible war, and his sons' wives dragged away by the ruinous hands of the Achaians. Myself then last of all at the street door will ravening dogs tear, when some one by stroke or throw of the sharp bronze hath bereft my limbs of life—even the dogs I reared in my halls about my table and to guard my door, which then having drunk my blood, maddened at heart shall lie in the gateway. A young man all beseemeth, even to be slain in war, to be torn by the sharp bronze and lie on the field; though he be dead yet is all honourable to him, what'er be seen: but when dogs defile the hoary head and hoary beard and the secret parts of an old man slain, this is the most piteous thing that cometh upon hapless men."

Thus spake the old man, and grasped his hoary hairs, plucking them from his head, but he persuaded not Hector's soul. Then his mother in her turn wailed tearfully, loosening the folds of her robe, while with the other hand she showed her breast;

and through her tears spake to him, winged words:  
"Hector, my child, have regard unto this bosom  
and pity me, if ever I gave thee consolation of my  
breast. Think of it, dear child, and from this side  
the wall drive back the foe, nor stand in front to  
meet him. He is merciless; if he slay thee it will  
not be on a bed that I or thy wife wooed with many  
gifts shall bewail thee, my own dear child, but far  
away from us by the ships of the Argives will swift  
dogs devour thee."

Thus they with wailing spake to their dear son,  
beseeching him sore, yet they persuaded not Hector's  
soul, but he stood awaiting Achilles as he drew nigh  
in giant might. As a serpent of the mountains upon  
his den awaiteth a man, having fed on evil poisons,  
and fell wrath hath entered into him, and terribly  
he glareth as he coileth himself about his den, so  
Hector with courage unquenchable gave not back,  
leaning his shining shield against a jutting tower.  
Then sore troubled he spake to his great heart: "Ay  
me, if I go within the gates and walls, Polydamas  
will be first to bring reproach against me, since he  
bade me lead the Trojans to the city during this  
ruinous night, when noble Achilles arose. But I  
regarded him not, yet surely it had been better far.  
And now that I have undone the host by my wanton-  
ness, I am ashamed before the men of Troy and  
women of trailing robes, lest at any time some worse  
man than I shall say: 'Hector by trusting his own  
might undid the host.' So will they speak; then to  
me would it be better far to face Achilles and either  
slay him and go home, or myself die gloriously

before the city. Or what if I lay down my bossy shield and my stout helm, and lean my spear against the wall, and go of myself to meet noble Achilles and promise him that Helen, and with her all possessions that Alexandros brought in hollow ships to Troy, the beginning of strife, we will give to the sons of Atreus to take away, and therewithal to divide in half with the Achaians all else that this city holdeth: and if thereafter I obtain from the Trojans an oath of the Elders that they will hide nothing but divide all in twain [whatever wealth the pleasant city hold within]? But wherefore doth my heart debate thus? I might come unto him and he would not pity or regard me at all, but presently slay me unarmed as it were but a woman, if I put off my armour. No time is it now to dally with him from oaktree or from rock, like youth with maiden, as youth and maiden hold dalliance one with another. Better is it to join battle with all speed: let us know upon which of us twain the Olympian shall bestow renown."

Thus pondered he as he stood, but nigh on him came Achilles, peer of Enyalios warrior of the waving helm, brandishing from his right shoulder the Pelian ash, his terrible spear; and all around the bronze on him flashed like the gleam of blazing fire or of the Sun as he ariseth. And trembling seized Hector as he was aware of him, nor endured he to abide in his place, but left the gates behind him and fled in fear. And the son of Peleus darted after him, trusting in his swift feet. As a falcon upon the mountains, swiftest of winged things, swoopeth fleetly after a

trembling dove; and she before him fleeth, while he with shrill screams hard at hand still darteth at her, for his heart urgeth him to seize her; so Achilles in hot haste flew straight for him, and Hector fled beneath the Trojans' wall, and plied swift knees. They past the watch-place and wind-waved wild figtree sped ever, away from under the wall, along the waggon-track, and came to the two fair-flowing springs, where two fountains rise that feed deep-eddying Skamandros. The one floweth with warm water, and smoke goeth up therefrom around as it were from a blazing fire, while the other even in summer floweth forth like cold hail or snow or ice that water formeth. And there beside the springs are broad washing-troughs hard by, fair troughs of stone, where wives and fair daughters of the men of Troy were wont to wash bright raiment, in the old time of peace, before the sons of the Achaians came. Thereby they ran, he flying, he pursuing. Valiant was the flier but far mightier he who fleetly pursued him. For not for beast of sacrifice or for an ox-hide were they striving; such as are prizes for men's speed of foot, but for the life of horse-taming Hector was their race. And as when victorious whole-hooved horses run rapidly round the turning-points, and some great prize lieth in sight, be it a tripod or a woman, in honour of a man that is dead, so thrice around Priam's city circled those twain with flying feet, and all the gods were gazing on them. Then among them spake first the father of gods and men: "Ay me, a man beloved I see pursued around the wall. My heart is woe for Hector, who hath burnt for me many

thighs of oxen amid the crests of many-folded Ida, and other times on the city-height; but now is goodly Achilles pursuing him with swift feet round Priam's town. Come, give your counsel, gods, and devise whether we shall save him from death or now at last slay him, valiant though he be, by the hand of Achilles Peleus' son."

Then to him answered the bright-eyed goddess Athene: "O Father, Lord of the bright lightning and the dark cloud, what is this thou hast said? A man that is a mortal, doomed long ago by fate, wouldst thou redeem back from ill-boding death? Do it, but not all we other gods approve."

And unto her in answer spake cloud-gathering Zeus: "Be of good cheer, Triton-born, dear child: not in full earnest speak I, and I would fain be kind to thee. Do as seemeth good to thy mind, and draw not back."

Thus saying he roused Athene, that already was set thereon, and from the crests of Olympus she darted down.

But after Hector sped fleet Achilles chasing him vehemently. And as when on the mountains a hound hunteth the fawn of a deer, having started it from its covert, through glens and glades, and if it crouch to baffle him under a bush, yet scenting it out the hound runneth constantly until he find it; so Hector baffled not Peleus' fleet-footed son. Oft as he set himself to dart under the well built walls over against the Dardanian gates, if haply from above they might succour him with darts, so oft would Achilles gain on him and turn him toward the plain, while himself

he sped ever on the cityside. And as in a dream one faileth in chase of a flying man—the one faileth in his flight and the other in his chase—so failed Achilles to overtake him in the race, and Hector to escape. And thus would Hector have avoided the visitation of death, had not this time been utterly the last wherein Apollo came nigh to him, who nerved his strength and his swift knees. For to the host did noble Achilles sign with his head, and forbade them to hurl bitter darts against Hector, lest any smiting him should gain renown, and he himself come second. But when the fourth time they had reached the springs, then the Father hung his golden balances, and set therein two lots of dreary death, one of Achilles, one of horse-taming Hector, and held them by the midst and poised. Then Hector's fated day sank down, and fell to the house of Hades, and Phoebus Apollo left him. But to Peleus' son came the bright-eyed goddess Athene, and standing near spake to him winged words: "Now verily, glorious Achilles dear to Zeus, I have hope that we twain shall carry off great glory to the ships for the Achaians, having slain Hector, for all his thirst for fight. No longer is it possible for him to escape us, not even though far-darting Apollo should travail sore, groveling before the Father, aegis-bearing Zeus. But do thou now stand and take breath, and I will go and persuade this man to confront thee in fight."

Thus spake Athene, and he obeyed, and was glad at heart, and stood leaning on his bronze-pointed ashen-spear. And she left him and came to noble Hector, like unto Deiphobos in shape and in strong

voice, and standing near spake to him winged words :  
“ Dear brother, verily fleet Achilles doth thee violence,  
chasing thee round Priam’s town with swift feet : but  
come let us make a stand and await him on our  
defence.”

Then answered her great Hector of the glancing  
helm : “ Deiphobos, verily aforetime wert thou far  
dearest of my brothers, whom Hekabe and Priam  
gendered, but now methinks I shall honour thee even  
more, in that thou hast dared for my sake, when  
thou sawest me, to come forth of the wall, while the  
others tarry within.”

Then to him again spake the bright-eyed goddess  
Athene : “ Dear brother, of a truth my father and  
lady mother and my comrades around besought me  
much, entreating me in turn, to tarry there, so greatly  
do they all tremble before him ; but my heart within  
was sore with dismal grief. And now fight we with-  
straight-set resolve and let there be no sparing of  
spears, that we know whether Achilles is to slay  
us and carry our bloody spoils to the hollow ships, or  
whether he might be vanquished by thy spear.”

Thus saying Athene in her subtlety led him on.  
And when they were come nigh in onset on one  
another, to Achilles first spake great Hector of the  
glancing helm : “ No longer, son of Peleus, will I fly  
thee, as before I thrice ran round the great town of  
Priam, and endured not to await thy onset. Now my  
heart biddeth me stand up against thee ; I will either  
slay or be slain. But come hither and let us pledge  
us by our gods, for they shall be best witnesses and  
beholders of covenants : I will entreat thee in no

outrageous sort, if Zeus grant me to outstay thee, and if I take thy life, but when I have despoiled thee of thy glorious armour, O Achilles, I will give back thy dead body to the Achaians, and do thou the same."

But unto him with grim gaze spake Achilles fleet of foot: "Hector, talk not to me, thou mad-man, of covenants. As between men and lions there is no pledge of faith, nor wolves and sheep can be of one mind, but imagine evil continually against each other, so is it impossible for thee and me to be friends, neither shall be any pledge between us until one or other shall have fallen and glutted with blood Ares, the stubborn god of war. Bethink thee of all thy soldiership: now behoveth it thee to quit thee as a good spearman and valiant man of war. No longer is there way of escape for thee, but Pallas Athene will straightway subdue thee to my spear; and now in one hour shalt thou pay back for all my sorrows for my friends whom thou hast slain in the fury of thy spear."

He said, and poised his far-shadowing spear and hurled. And noble Hector watched the coming thereof and avoided it; for with his eye on it he crouched, and the bronze spear flew over him, and fixed itself in the earth; but Pallas Athene caught it up and gave it back to Achilles, unknown of Hector shepherd of hosts. Then Hector spake unto the noble son of Peleus: "Thou hast missed, so no wise yet, godlike Achilles, hast thou known from Zeus the hour of my doom, though thou thoughtest it. Cunning of tongue art thou and a deceiver in

speech, that fearing thee I might forget my valour and strength. Not as I flee shalt thou plant thy spear in my reins, but drive it straight through my breast as I set on thee, if God hath given thee to do it. Now in thy turn avoid my spear of bronze. O that thou mightest take it all into thy flesh! Then would the war be lighter to the Trojans, if but thou wert dead, for thou art their greatest bane."

He said, and poised his long-shadowed spear and hurled it, and smote the midst of the shield of Peleus' son, and missed him not; but far from the shield the spear leapt back. And Hector was wroth that this swift weapon had left his hand in vain, and he stood downcast, for he had no second ashen spear and he called with a loud shout to Deïphobos of the white shield, and asked of him a long spear, but he was no wise nigh. Then Hector knew the truth in his heart, and spake and said: "Ay me, now verily the gods have summoned me to death. I deemed the warrior Deïphobos was by my side, but he is within the wall, and it was Athene who played me false. Now therefore is evil death come very nigh me, not far off, nor is there any way of escape. This then was from of old the pleasure of Zeus and of the far-darting son of Zeus, who yet before were fain to succour me: but now my fate hath found me. At least let me not die without a struggle or ingloriously, but in some great deed of arms whereof men yet to be born shall hear."

Thus saying he drew his sharp sword that by his flank hung great and strong, and gathered himself and swooped like a soaring eagle that darteth to the

plain through the dark clouds to seize a tender lamb or crouching hare. So Hector swooped, brandishing his sharp sword. And Achilles made at him, for his heart was filled with wild fierceness, and before his breast he made a covering with his fair graven shield, and tossed his bright four-plated helm; and round it waved fair golden plumes [that Hephaistos had set thick about the crest]. As a star goeth among stars in the darkness of night, Hesperos, fairest of all stars set in the heaven, so flashed there forth a light from the keen spear Achilles poised in his right hand, devising mischief against noble Hector, eyeing his fair flesh to find the fittest place. Now for the rest of him his flesh was covered by the fair bronze armour he stripped from strong Patroklos when he slew him, but there was an opening where the collar bones coming from the shoulders clasp the neck, even at the gullet, where destruction of life cometh quickest; there, as he came on, noble Achilles drave at him with his spear, and right through the tender neck went the point. Yet the bronze-weighted ashen spear clave not the windpipe, so that he might yet speak words of answer to his foe. And he fell down in the dust, and noble Achilles spake exultingly; "Hector, thou thoughtest, whilst thou were spoiling Patroklos, that thou wouldst be safe, and didst reckon nothing of me who was afar, thou fool. But away among the hollow ships his comrade, a mightier far, even I, was left behind, who now have unstrung thy knees. Thee shall dogs and birds tear foully, but his funeral shall the Achaians make."

Then with faint breath spake unto him Hector of the glancing helm: "I pray thee by thy life and knees and parents leave me not for dogs of the Achaians to devour by the ships, but take good store of bronze and gold, gifts that my father and lady mother shall give to thee, and give them home my body back again, that the Trojans and Trojans' wives give me my due of fire after my death."

But unto him with grim gaze spake Achilles fleet of foot: "Entreat me not, dog, by knees or parents. Would that my heart's desire could so bid me myself to carve and eat raw thy flesh, for the evil thou hast wrought me, as surely is there none that shall keep the dogs from thee, not even should they bring ten or twenty fold ransom and here weigh it out, and promise even more, not even were Priam Dardanos' son to bid pay thy weight in gold, not even so shall thy lady mother lay thee on a bed to mourn her son, but dogs and birds shall devour thee utterly."

Then dying spake unto him Hector of the glancing helm: "Verily I know thee and behold thee as thou art, nor was I destined to persuade thee; truly thy heart is iron in thy breast. Take heed now lest I draw upon thee wrath of gods, in the day when Paris and Phoebus Apollo slay thee, for all thy valour, at the Skaian gate."

He ended, and the shadow of death came down upon him, and his soul flew forth of the limbs and was gone to the house of Hades, wailing her fate, leaving her vigour and youth. Then to the dead man

spake noble Achilles: "Die: for my death, I will accept it whenever Zeus and the other immortal gods are minded to accomplish it."

He said, and from the corpse drew forth his bronze spear, and set it aside, and stripped the bloody armour from the shoulders. And other sons of Achaians ran up around, who gazed upon the stature and marvellous goodliness of Hector. Nor did any stand by but wounded him, and thus would many a man say looking toward his neighbour: "Go to, of a truth far easier to handle is Hector now than when he burnt the ships with blazing fire." Thus would many a man say, and wound him as he stood hard by. And when fleet noble Achilles had despoiled him, he stood up among the Achaians and spoke winged words: "Friends, chiefs and counsellors of the Argives, since the gods have vouchsafed us to vanquish this man who hath done us more evil than all the rest together, come let us make trial in arms round about the city, that we may know somewhat of the Trojans' purpose, whether since he hath fallen they will forsake the citadel, or whether they are minded to abide, albeit Hector is no more. But wherefore doth my heart debate thus? There lieth by the ships a dead man unbewailed, unburied, Patroklos; him will I not forget, while I abide among the living and my knees can stir. Nay if even in the house of Hades the dead forget their dead, yet will I even there be mindful of my dear comrade. But come, ye sons of the Achaians, let us now, singing our song of victory, go back to the hollow ships and take with us our foe. Great glory have we won; we have slain the noble

Hector, unto whom the Trojans prayed throughout their city, as he had been a god."

He said, and devised foul entreatment of noble Hector. The tendons of both feet behind he slit from heel to ankle-joint, and thrust therethrough thongs of ox-hide, and bound him to his chariot, leaving his head to trail. And when he had mounted the chariot, and lifted therein the famous armour, he lashed his horses to speed, and they nothing loth flew on. And dust rose around him that was dragged, and his dark hair flowed loose on either side, and in the dust lay all his once fair head, for now had Zeus given him over to his foes to entreat foully in his own native land.

Thus was his head all grimed with dust. But his mother when she beheld her son, tore her hair and cast far from her her shining veil, and cried aloud with an exceeding bitter cry. And piteously moaned his father, and around them the folk fell to crying and moaning throughout the town. Most like it seemed as though all beetling Ilios were burning utterly in fire. Scarcely could the folk keep back the old man in his hot desire to get him forth of the Dardanian gates. For he besought them all, casting himself down in the mire, and calling on each man by his name: "Hold, friends, and though you love me leave me to get me forth of the city alone and go unto the ships of the Achaians. Let me pray this accursed horror-working man, if haply he may feel shame before his age-fellows and pity an old man. He also hath a father such as I am, Peleus, who begat and reared him to be a bane of Trojans—

and most of all to me hath he brought woe. So many sons of mine hath he slain in their flower—yet for all my sorrow for the rest I mourn them all less than this one alone, for whom my sharp grief will bring me down to the house of Hades—even Hector. Would that he had died in my arms; then would we have wept and wailed our fill, his mother who bore him to her ill hap, and I myself.”

Thus spake he wailing, and all the men of the city made moan with him. And among the women of Troy, Hekabe led the wild lament: “My child, ah, woe is me! wherefore should I live in my pain, now thou art dead, who night and day wert my boast through the city, and blessing to all, both men and women of Troy throughout the town, who hailed thee as a god, for verily an exceeding glory to them wert thou in thy life:—now death and fate have overtaken thee.”

Thus spake she wailing. But Hector's wife knew not as yet, for no true messenger had come to tell her how her husband abode without the gates, but in an inner chamber of the lofty house she was weaving a double purple web, and broidering therein manifold flowers. Then she called to her goodly haired handmaids through the house to set a great tripod on the fire, that Hector might have warm washing when he came home out of the battle—fond heart, and was unaware how, far from all washings, bright-eyed Athene had slain him by the hand of Achilles. But she heard shrieks and groans from the battlements, and her limbs reeled, and the shuttle fell from her hands to earth. Then again among her

goodly-haired maids she spake: "Come two of ye this way with me that I may see what deeds are done. It was the voice of my husband's noble mother that I heard, and in my own breast my heart leapeth to my mouth and my knees are numbed beneath me: surely some evil thing is at hand against the children of Priam. Would that such word might never reach my ear! yet terribly I dread lest noble Achilles have cut off bold Hector from the city by himself and chased him to the plain and ere this ended his perilous pride that possessed him, for never would he tarry among the throng of men but ran out before them far, yielding place to no man in his hardihood."

Thus saying she sped through the chamber like one mad, with beating heart, and with her went her handmaidens. But when she came to the battlements and the throng of men, she stood still upon the wall and gazed, and beheld him dragged before the city:—swift horses dragged him recklessly toward the hollow ships of the Achaians. Then dark night came on her eyes and shrouded her, and she fell backward and gasped forth her spirit. From off her head she shook the bright attiring thereof, frontlet and net and woven band, and veil, the veil that golden Aphrodite gave her on the day when Hector of the glancing helm led her forth of the house of Eëtion, having given bride-gifts untold. And around her thronged her husband's sisters and his brothers' wives, who held her up among them, distraught even to death. But when at last she came to herself and her soul returned into her breast, then wailing with deep sobs she spake among the women of Troy:

“ O Hector, woe is me! to one fate then were we both born, thou in Troy in the house of Priam, and I in Thebe under woody Plakos, in the house of Eëtion, who reared me from a little one—ill-fated sire of cruel-fated child. Ah, would he had begotten me not. Now thou to the house of Hades beneath the secret places of the earth departest, and me in bitter mourning thou leavest a widow in thy halls: and thy son is but an infant child—son of unhappy parents, thee and me—nor shalt thou profit him, Hector, since thou art dead, neither he thee. For even if he escape the Achaians’ woeful war, yet shall labour and sorrow cleave unto him hereafter, for other men shall seize his lands. The day of orphanage sundereth a child from his fellows, and his head is bowed down ever, and his cheeks are wet with tears. And in his need the child seeketh his father’s friends, plucking this one by cloak and that by coat, and one of them that pity him holdeth his cup a little to his mouth, and moisteneth his lips, but his palate he moisteneth not. And some child unorphaned thrusteth him from the feast with blows and taunting words, ‘ Out with thee! no father of thine is at our board.’ Then weeping to his widowed mother shall he return, even Astyanax, who erst upon his father’s knee ate only marrow and fat flesh of sheep; and when sleep fell on him and he ceased from childish play, then in bed in his nurse’s arms he would slumber softly nested, having satisfied his heart with good things; but now that he hath lost his father he will suffer many ills, Astyanax—that name the Trojans gave him, because thou only wert the defence

of their gates and their long walls. But now by the beaked ships, far from thy parents, shall coiling worms devour thee when the dogs have had their fill, as thou liest naked; yet in these halls lieth raiment of thine, delicate and fair, wrought by the hands of women. But verily all these will I consume with burning fire—to thee no profit, since thou wilt never lie therein, yet that this be honour to thee from the men and the women of Troy.”

Thus spake she wailing, and the women joined their moan.

## THE COUNTRY OF THE BLIND

Three hundred miles and more from Chimborazo, one hundred from the snows of Cotopaxi, in the wildest wastes of Ecuador's Andes there lies that mysterious mountain valley, cut off from the world of men, the Country of the Blind. Long years ago that valley lay so far open to the world that men might come at last through frightful gorges and over an icy pass into its equable meadows; and thither indeed men came, a family or so of Peruvian half-breeds fleeing from the lust and tyranny of an evil Spanish ruler. Then came the stupendous outbreak of Mindobamba, when it was night in Quito for seventeen days and the water was boiling at Yaguachi and all the fish floating dying even as far as Guayaquil; everywhere along the Pacific slopes there were land-slips and swift thawings and sudden floods, and one whole side of the old Arauca crest slipped and came down in thunder, and cut off the Country of the Blind for ever from the exploring feet of men. But one of these early settlers had chanced to be on the hither side of the gorges when the world had so terribly shaken itself, and he perforce had to forget his wife and his child and all the friends and possessions he had left up there, and start life over again in the lower world. He started it again but ill, blindness overtook him, and he died of punishment in the mines; but the story he told begot a legend that lingers along the length of the Cordilleras of the Andes to this day.

He told of his reason for venturing back from that fastness, into which he had first been carried lashed to a llama, beside a vast bale of gear, when he was a child. The valley, he said, had in it all that the heart of man could desire—sweet water, pasture, and even climate, slopes of rich brown soil with tangles of a shrub that bore an excellent fruit, and on one side great hanging forests of pine that held the avalanches high. Far overhead, on three sides, vast cliffs of grey-green rock were capped by cliffs of ice; but the glacier stream came not to them but flowed away by the farther slopes, and only now and then huge ice masses fell on the valley side. In this valley it neither rained nor snowed, but the abundant springs gave a rich green pasture, that irrigation would spread over all the valley space. The settlers did well indeed there. Their beasts did well and multiplied, and but one thing marred their happiness. Yet it was enough to mar it greatly. A strange disease had come upon them, and had made all the children born to them there—and indeed, several older children also—blind. It was to seek some charm or antidote against this plague of blindness that he had with fatigue and danger and difficulty returned down the gorge. In those days, in such cases, men did not think of germs and infections but of sins; and it seemed to him that the reason of this affliction must lie in the negligence of these priestless immigrants to set up a shrine so soon as they entered the valley. He wanted a shrine—a handsome, cheap, effectual shrine—to be erected in the valley; he wanted relics and such-like potent

things of faith, blessed objects and mysterious medals and prayers. In his wallet he had a bar of native silver for which he would not account; he insisted there was none in the valley with something of the insistence of an inexperienced liar. They had all clubbed their money and ornaments together, having little need for such treasure up there, he said, to buy them holy help against their ill. I figure this dim-eyed young mountaineer, sunburnt, gaunt, and anxious, hat-brim clutched feverishly, a man all unused to the ways of the lower world, telling this story to some keen-eyed, attentive priest before the great convulsion; I can picture him presently seeking to return with pious and infallible remedies against that trouble, and the infinite dismay with which he must have faced the tumbled vastness where the gorge had once come out. But the rest of his story of mischances is lost to me, save that I know of his evil death after several years. Poor stray from that remoteness! The stream that had once made the gorge now bursts from the mouth of a rocky cave, and the legend his poor, ill-told story set going developed into the legend of a race of blind men somewhere "over there" one may still hear to-day.

And amidst the little population of that now isolated and forgotten valley the disease ran its course. The old became groping and purblind, the young saw but dimly, and the children that were born to them saw never at all. But life was very easy in that snow-rimmed basin, lost to all the world, with neither thorns nor briars, with no evil insects nor any beasts save the gentle breed

of llamas they had lugged and thrust and followed up the beds of the shrunken rivers in the gorges up which they had come. The seeing had become purblind so gradually that they scarcely noted their loss. They guided the sightless youngsters hither and thither until they knew the whole valley marvellously, and when at last sight died out among them the race lived on. They had even time to adapt themselves to the blind control of fire, which they made carefully in stoves of stone. They were a simple strain of people at the first, unlettered, only slightly touched with the Spanish civilisation, but with something of a tradition of the arts of old Peru and of its lost philosophy. Generation followed generation. They forgot many things; they devised many things. Their tradition of the greater world they came from became mythical in colour and uncertain. In all things save sight they were strong and able; and presently the chance of birth and heredity sent one who had an original mind and who could talk and persuade among them, and then afterwards another. These two passed, leaving their effects, and the little community grew in numbers and in understanding, and met and settled social and economic problems that arose. Generation followed generation. Generation followed generation. There came a time when a child was born who was fifteen generations from that ancestor who went out of the valley with a bar of silver to seek God's aid, and who never returned. Thereabouts it chanced that a man came into this community from the outer world. And this is the story of that man.

He was a mountaineer from the country near Quito, a man who had been down to the sea and had seen the world, a reader of books in an original way, an acute and enterprising man, and he was taken on by a party of Englishmen who had come out to Ecuador to climb mountains, to replace one of their three Swiss guides who had fallen ill. He climbed here and he climbed there, and then came the attempt on Parascotopetl, the Matterhorn of the Andes, in which he was lost to the outer world. The story of the accident has been written a dozen times. Pointer's narrative is the best. He tells how the party worked their difficult and almost vertical way up to the very foot of the last and greatest precipice, and how they built a night shelter amidst the snow upon a little shelf of rock, and, with a touch of real dramatic power, how presently they found Nunez had gone from them. They shouted, and there was no reply; shouted and whistled, and for the rest of that night they slept no more.

As the morning broke they saw the traces of his fall. It seems impossible he could have uttered a sound. He had slipped eastward towards the unknown side of the mountain; far below he had struck a steep slope of snow, and ploughed his way down it in the midst of a snow avalanche. His track went straight to the edge of a frightful precipice, and beyond that everything was hidden. Far, far below, and hazy with distance, they could see trees rising out of a narrow, shut-in valley—the lost Country of the Blind. But they did not know it was the lost Country of the Blind, nor distinguish it in any way

from any other narrow streak of upland valley. Unnerved by this disaster, they abandoned their attempt in the afternoon, and Pointer was called away to the war before he could make another attack. To this day Parascotopetl lifts an unconquered crest, and Pointer's shelter crumbles unvisited amidst the snows.

And the man who fell survived.

At the end of the slope he fell a thousand feet, and came down in the midst of a cloud of snow upon a snow slope even steeper than the one above. Down this he was whirled, stunned and insensible, but without a bone broken in his body; and then at last came to gentler slopes, and at last rolled out and lay still, buried amidst a softening heap of the white masses that had accompanied and saved him. He came to himself with a dim fancy that he was ill in bed; then realised his position with a mountaineer's intelligence, and worked himself loose and, after a rest or so, out until he saw the stars. He rested flat upon his chest for a space, wondering where he was and what had happened to him. He explored his limbs, and discovered that several of his buttons were gone and his coat turned over his head. His knife had gone from his pocket and his hat was lost, though he had tied it under his chin. He recalled that he had been looking for loose stones to raise his piece of the shelter wall. His ice-axe had disappeared.

He decided he must have fallen, and looked up to see, exaggerated by the ghastly light of the rising moon, the tremendous flight he had taken. For a

while he lay, gazing blankly at that vast pale cliff towering above, rising moment by moment out of a subsiding tide of darkness. Its phantasmal, mysterious beauty held him for a space, and then he was seized with a paroxysm of sobbing laughter. . . .

After a great interval of time he became aware that he was near the lower edge of the snow. Below, down what was now a moonlit and practicable slope, he saw the dark and broken appearance of rock-strewn turf. He struggled to his feet, aching in every joint and limb, got down painfully from the heaped loose snow about him, went downward until he was on the turf, and there dropped rather than lay beside a boulder, drank deep from the flask in his inner pocket, and instantly fell asleep. . . .

He was awakened by the singing of birds in the trees far below.

He sat up and perceived he was on a little alp at the foot of a vast precipice, that was grooved by the gully down which he and his snow had come. Over against him another wall of rock reared itself against the sky. The gorge between these precipices ran east and west and was full of the morning sunlight, which lit to the westward the mass of fallen mountain that closed the descending gorge. Below him it seemed there was a precipice equally steep, but behind the snow in the gully he found a sort of chimney-cleft dripping with snow-water down which a desperate man might venture. He found it easier than it seemed, and came at last to another desolate alp, and then after a rock climb of no particular difficulty to a steep slope of trees. He took his bearings

and turned his face up the gorge, for he saw it opened out above upon green meadows, among which he now glimpsed quite distinctly a cluster of stone huts of unfamiliar fashion. At times his progress was like clambering along the face of a wall, and after a time the rising sun ceased to strike along the gorge, the voices of the singing birds died away, and the air grew cold and dark about him. But the distant valley with its houses was all the brighter for that. He came presently to talus, and among the rocks he noted—for he was an observant man—an unfamiliar fern that seemed to clutch out of the crevices with intense green hands. He picked a frond or so and gnawed its stalk and found it helpful.

About midday he came at last out of the throat of the gorge into the plain and the sunlight. He was stiff and weary; he sat down in the shadow of a rock, filled up his flask with water from a spring and drank it down, and remained for a time resting before he went on to the houses.

They were very strange to his eyes, and indeed the whole aspect of that valley became, as he regarded it, queerer and more unfamiliar. The greater part of its surface was lush green meadow, starred with many beautiful flowers, irrigated with extraordinary care, and bearing evidence of systematic cropping piece by piece. High up and ringing the valley about was a wall, and what appeared to be a circumferential water-channel, from which the little trickles of water that fed the meadow plants came, and on the higher slopes above this, flocks of llamas cropped the scanty herbage. Sheds apparently shelters or feeding

places for the llamas stood against the boundary wall here and there. The irrigation streams ran together into a main channel down the centre of the valley, and this was enclosed on either side by a wall breast high. This gave a singularly urban quality to this secluded place, a quality that was greatly enhanced by the fact that a number of paths paved with black and white stones, and each with a curious little kerb at the side, ran hither and thither in an orderly manner. The houses of the central village were quite unlike the casual and higgledy-piggledy agglomeration of the mountain villages he knew; they stood in a continuous row on either side of a central street of astonishing cleanness; here and there their parti-coloured facade was pierced by a door, and not a solitary window broke their even frontage. They were parti-coloured with extraordinary irregularity, smeared with a sort of plaster that was sometimes grey, sometimes drab, sometimes slate-coloured or dark brown; and it was the sight of this wild plastering first brought the word "blind" into the thoughts of the explorer. "The good man who did that," he thought, "must have been as blind as a bat."

He descended a steep place, and so came to the wall and channel that ran about the valley, near where the latter spouted out its surplus contents into the deeps of the gorge in a thin and wavering thread of cascade. He could now see a number of men and women resting on piled heaps of grass, as if taking a siesta, in the remoter part of the meadow, and nearer the village a number of recumbant children,

and then nearer at hand three men carrying pails on yokes along a little path that ran from the encircling wall towards the houses. These latter were clad in garments of llama cloth and boots and belts of leather, and they wore caps of cloth with back and ear flaps. They followed one another in single file, walking slowly and yawning as they walked, like men who have been up all night. There was something so reassuringly prosperous and respectable in their bearing that after a moment's hesitation Nunez stood forward as conspicuously as possible upon his rock, and gave vent to a mighty shout that echoed round the valley.

The three men stopped, and moved their heads as though they were looking about them. They turned their faces this way and that, and Nunez gesticulated with freedom. But they did not appear to see him for all his gestures, and after a time, directing themselves towards the mountains far away to the right, they shouted as if in answer. Nunez bawled again, and then once more, and as he gestured ineffectually, the word "blind" came up to the top of his thoughts. "The fools must be blind," he said.

When at last after much shouting and wrath, Nunez crossed the stream by a little bridge, came through a gate in the wall, and approached them, he was sure that they were blind. He was sure that this was the Country of the Blind of which the legends told. Conviction had sprung upon him, and a sense of great and rather enviable adventure. The three stood side by side, not looking at him, but with their

ears directed towards him, judging him by his unfamiliar steps. They stood close together like men a little afraid, and he could see their eyelids closed and sunken, as though the very balls beneath had shrunk away. There was an expression near awe on their faces.

"A man," one said, in hardly recognisable Spanish—"a man it is—a man or a spirit—coming down from the rocks."

But Nunez advanced with the confident steps of a youth who enters upon life. All the old stories of the lost valley and the Country of the Blind had come back to his mind, and through his thoughts ran this old proverb, as if it were a refrain—

"In the Country of the Blind the One-eyed Man is King."

"In the Country of the Blind the One-eyed man is King."

And very civilly he gave them greeting. He talked to them and used his eyes.

"Where does he come from, brother Pedro?" asked one.

"Down out of the rocks."

"Over the mountains I come," said Nunez, "out of the country beyond there—where men can see. From near Bogota, where there are a hundred thousands of people, and where the city passes out of sight."

"Sight?" muttered Pedro. "Sight?"

"He comes," said the second blind man, "out of the rocks."

The cloth of their coats Nunez saw was curiously fashioned, each with a different sort of stitching.

They startled him by a simultaneous movement towards him, each with a hand outstretched. He stepped back from the advance of these spread fingers.

"Come hither," said the third blind man, following his motion and clutching him neatly.

And they held Nunez and felt him over, saying no word further until they had done so.

"Carefully," he cried, with a finger in his eye, and found they thought that organ, with its fluttering lids, a queer thing in him. They went over it again.

"A strange creature, Correa," said the one called Pedro. "Feel the coarseness of his hair. Like a llama's hair."

"Rough he is as the rocks that begot him," said Correa, investigating Nunez's unshaven chin with a soft and slightly moist hand. "Perhaps he will grow finer." Nunez struggled a little under their examination, but they gripped him firm.

"Carefully," he said again.

"He speaks," said the third man. "Certainly he is a man."

"Ugh!" said Pedro, at the roughness of his coat.

"And you have come into the world?" asked Pedro.

"Out of the world. Over mountain and glaciers; right over above there, half-way to the sun.

Out of the great big world that goes down twelve days' journey to 'he sea."

They scarcely seemed to heed him. "Our fathers have told us men may be made by the forces of Nature," said Correa. "It is the warmth of things and moisture, and rotteness—rotteness."

"Let us lead him to the elders," said Pedro.

"Shout first," said Correa, "lest the children be afraid. This is a unarvellous occasion."

So they shouted, and Pedro went first and took Nunez by the hand to lead him to the houses.

He drew his hand away. "I can see," he said.

"See?" said Correa.

"Yes, see," said Nunez, turning towards him, and stumbled against Pedro's pail.

"His senses are still imperfect," said the third blind man. "He stumbles, and talks unmeaning words. Lead him by the hand."

"As you will," said Nunez, and was led along, laughing.

It seemed they knew nothing of sight.

Well, all in good time he would teach them.

He heard people shouting, and saw a number of figures gathering together in the middle roadway of the village.

He found it tax his nerve and patience more than he had anticipated, that first encounter with the population of the Country of the Blind. The place seemed larger as he drew near to it, and the smeared plastering queerer, and a crowd of children and men and women (the women and girls, he was pleased to note, had some of them quite sweet faces, for all that

their eyes were shut and sunken) came about him, holding on to him, touching him with soft sensitive hands, smelling at him, and listening at every word he spoke. Some of the maidens and children, however, kept aloof as if afraid, and indeed his voice seemed coarse and rude beside their softer notes. They mobbed him. His three guides kept close to him with an effect of proprietorship, and said again and again, "A wild man out of the rocks."

"Bogota," he said. "Bogota. Over the mountain crests."

"A wild man using wild words," said Pedro. "Did you hear that—*Bogota*? His mind is hardly formed yet. He has only the beginnings of speech."

A little boy nipped his hand. "Bogota!" he said mockingly. "Ay! A city to your village. I come from the great world—where men have eyes and see."

"His name's Bogota," they said.

"He stumbled," said Correa, "stumbled twice as we came hither."

"Bring him to the elders."

And they thrust him suddenly through a doorway into a room as black as pitch, save at the end there faintly glowed a fire. The crowd closed in behind him and shut out all but the faintest glimmer of day, and before he could arrest himself he had fallen headlong over the feet of a seated man. His arm, outflung, struck the face of someone else as he went down; he felt the soft impact of features and heard a cry of anger, and for a moment he struggled against a number of hands that clutched him. It

was a one-sided fight. An inkling of the situation came to him, and he lay quiet.

"I fell down," he said; "I couldn't see in this pitchy darkness."

There was a pause as if the unseen persons about him tried to understand his words. Then the voice of Correa said: "He is but newly formed. He stumbles as he walks and mingles words that mean nothing with his speech."

Others also said things about him that he heard or understood imperfectly.

"May I sit up?" he asked, in a pause. "I will not struggle against you again."

They consulted and let him rise.

The voice of an older man began to question him, and Nunez found himself trying to explain the great world out of which he had fallen, and the sky and mountains and sight and such-like marvels, to these elders who sat in darkness in the Country of the Blind. And they would believe and understand nothing whatever he told them, a thing quite outside his expectation. They would not even understand many of his words. For fourteen generation these people had been blind and cut off from all the seeing world; the names for all the things of sight had faded and changed; the story of the outer world was faded and changed to a child's story; and they had ceased to concern themselves with anything beyond the rocky slopes above their circling wall. Blind men of genius had arisen among them and questioned the shreds of belief and tradition they had brought with them from their seeing days, and had dismissed all

these things as idle fancies, and replaced them with new and saner explanations. Much of their imagination had shrivelled with their eyes, and they had made for themselves new imaginations with their evermore sensitive ears and finger-tips. Slowly Nunez realised this; that his expectation of wonder and reverence at his origin and his gifts was not to be borne out; and after his poor attempt to explain sight to them had been set aside as the confused version of a new-made being describing the marvels of his incoherent sensations, he subsided, a little dashed, into listening to their instruction. And the eldest of the blind men explained to him life and philosophy and religion, how that the world (meaning their valley) had been first an empty hollow in the rocks, and then had come, first, inanimate things without the gift of touch, and llamas and a few other creatures that had little sense, and then men, at last angels, whom one could hear singing and making fluttering sounds, but whom no one could touch at all, which puzzled Nunez greatly until he thought of the birds.

He went on to tell Nunez how this time had been divided into the warm and the cold, which are the blind equivalents of day and night, and how it was good to sleep in the warm and work during the cold, so that now, but for his advent, the whole town of the blind would have been asleep. He said Nunez must have been specially created to learn and serve the wisdom they had acquired, and for that all his mental incoherency and stumbling behaviour he must have courage, and do his best to

learn, and at that all the people in the doorway murmured encouragingly. He said the night—for the blind call their day night—was now far gone, and it behooved every one to back to sleep. He asked Nunez if he knew how to sleep, and Nunez said he did, but that before sleep, he wanted food.

They brought him food—llama's milk in a bowl, and rough salted bread—and led him into a lonely place to eat out of their hearing, and afterwards to slumber until the chill of the mountain evening roused them to begin their day again. But Nunez slumbered not at all.

Instead, he sat up in the place where they had left him, resting his limbs and turning the unanticipated circumstances of his arrival over and over in his mind.

Every now and then he laughed, sometimes with amusement, and sometimes with indignation.

"Unformed mind!" he said. "Got no senses yet! They little know the've been insulting their heaven-sent king and master. I see I must bring them to reason. Let me think—let me think."

He was still thinking when the sun set.

Nunez had an eye for all beautiful things, and it seemed to him that the glow upon the snowfields and glaciers that rose about the valley on every side was the most beautiful thing he had ever seen. His eyes went from that inaccessible glory to the village and irrigated fields, fast sinking into the twilight, and suddenly a wave of emotion took him, and he thanked God from the bottom of his heart that the power of sight had been given him.

He heard a voice calling to him from out of the village.

"Ya ho there, Bogota! Come hither!"

At that he stood up smiling. He would show these people once and for all what sight would do for a man. They would seek him, but not find him.

"You move not, Bogota," said the voice.

He laughed noiselessly, and made two stealthy steps aside from the path.

"Trample not on the grass, Bogota; that is not allowed."

Nunez had scarcely heard the sound he made himself. He stopped amazed.

The owner of the voice came running up the piebald path towards him.

He stepped back into the pathway. "Here I am," he said.

"Why did you not come when I called you?" said the blind man. "Must you be led like a child? Cannot you hear the path as you walk?"

Nunez laughed. "I can see it," he said.

"There is no such word as *see*," said the blind man, after a pause. "Cease this folly, and follow the sound of my feet."

Nunez followed, a little annoyed.

"My time will come," he said.

"You will learn," the blind man answered. "There is much to learn in the world."

"Has no one told you, 'In the Country of the Blind the One-eyed Man is King?'"

"What is blind?" asked the blind man carelessly over his shoulder.

Four days passed, and the fifth found the King of the Blind still incognito, as a clumsy and useless stranger among his subjects.

It was, he found, much more difficult to proclaim himself than he had supposed, and in the meantime, while he meditated his *coup d'état*, he did what he was told and learnt the manners and customs of the Country of the Blind. He found working and going about at night a particularly irksome thing, and he decided that that should be the first thing he would change.

They led a simple, laborious life, these people, with all the elements of virtue and happiness, as these things can be understood by men. They toiled, but not oppressively; they had food and clothing sufficient for their needs; they had days and seasons of rest; they made much of music and singing, and there was love among them, and little children.

It was marvellous with what confidence and precision they went about their ordered world. Everything, you see, had been made to fit their needs; each of the radiating paths of the valley area had a constant angle to the others, and was distinguished by a special notch upon its kerbing; all obstacles and irregularities of path or meadow had long since been cleared away; all their methods and procedure arose naturally from their special needs. Their senses had become marvellously acute; they could hear and judge the slightest gesture of a man a dozen paces away—could hear the very beating of his heart. Intonation had long replaced expression with them, and touches gesture, and their work

with hoe and spade and fork was as free and confident as garden work can be. Their sense of smell was extraordinarily fine; they could distinguish individual differences as readily as a dog can, and they went about the tending of the llamas, who lived among the rocks above and came to the wall for food and shelter, with ease and confidence. It was only when at last Nunez sought to assert himself that he found how easy and confident their movements could be.

He rebelled only after he had tried persuasion.

He tried at first on several occasion to tell them of sight. "Look you here, you people," he said. "There are things you do not understand in me."

Once or twice one or two of them attended to him; they sat with faces downcast and ears turned intelligently towards him, and he did his best to tell them what it was to see. Among his hearers was a girl, with eyelids less red and sunken than the others, so that one could almost fancy she was hiding eyes, whom especially he hoped to persuade. He spoke of the beauties of sight, of watching the mountains, of the sky and the sunrise, and they heard him with amused incredulity that presently became condemnatory. They told him there were indeed no mountains at all, but that the end of the rocks where the llamas grazed was indeed the end of the world; thence sprang a cavernous roof of the universe, from which the dew and the avalanches fell; and when he maintained stoutly the world had neither end nor roof such as they supposed, they said his thoughts were wicked. So far as he could

describe sky and clouds and stars to them it seemed to them a hideous void, a terrible blankness in the place of the smooth roof to things in which they believed—it was an article of faith with them that the cavern roof was exquisitely smooth to the touch. He saw that in some manner he shocked them, and gave up that aspect of the matter altogether, and tried to show them the practical value of sight. One morning he saw Pedro in the path called Seventeen and coming towards the central houses, but still too far off for hearing or scent, and he told them as much. “In a little while,” he prophesied, “Pedro will be here.” An old man remarked that Pedro had no business on path Seventeen, and then, as if in confirmation, that individual as he drew near turned and went transversely into path Ten, and so back with nimble paces towards the outer wall. They mocked Nunez when Pedro did not arrive, and afterwards, when he asked Pedro questions to clear his character, Pedro denied and outfaced him, and was afterwards hostile to him.

Then he induced them to let him go a long way up the sloping meadows towards the wall with one complacent individual, and to him he promised to describe all that happened among the houses. He noted certain goings and comings, but the things that really seemed to signify to these people happened inside of or behind the windowless houses—the only things they took note of to test him by—and of these he could see or tell nothing; and it was after the failure of this attempt, and the ridicule they could not repress, that he resorted to force. He thought of

seizing a spade and suddenly smiting one or two of them to earth, and so in fair combat showing the advantage of eyes. He went so far with that resolution as to seize his spade, and then he discovered a new thing about himself, and that was that it was impossible for him to hit a blind man in cold blood.

He hesitated, and found them all aware that he snatched up the spade. They stood alert, with their heads on one side, and bent ears towards him for what he would do next.

“Put that spade down,” said one, and he felt a sort of helpless horror. He came near obedience.

Then he thrust one backwards against a house-wall, and fled past him and out of the village.

He went athwart one of their meadows, leaving a track of trampled grass behind his feet, and presently sat down by the side of one of their ways. He felt something of the buoyancy that comes to all men in the beginning of a fight, but more perplexity. He began to realise that you cannot even fight happily with creatures who stand upon a different mental basis to yourself. Far away he saw a number of men carrying spades and sticks come out of the street of houses, and advance in a spreading line along the several paths towards him. They advanced slowly, speaking frequently to one another, and ever and again the whole cordon would halt and sniff the air and listen.

The first time they did this Nunez laughed. But afterwards he did not laugh.

One struck his trail in the meadow grass, and came stooping and feeling his way along it.

For five minutes he watched the slow extension of the cordon, and then his vague disposition to do something forthwith became frantic. He stood up, went a pace or so towards the circumferential wall, turned, and went back a little way. There they all stood in a crescent, still and listening.

He also stood still, gripping his spade very tightly in both hands. Should he charge them?

The pulse in his ears ran into the rhythm of "In the Country of the Blind the One-eyed Man is King!"

Should he charge them?

He looked back at the high and unclimbable wall behind—unclimbable because of its smooth plastering, but withal pierced with many little doors, and at the approaching line of seekers. Behind these others were now coming out of the street of houses.

Should he charge them?

"Bogota!" called one. "Bogota! where are you?"

He gripped his spade still tighter, and advanced down the meadows towards the place of habitations, and directly he moved they converged upon him. "I'll hit them if they touch me," he swore; "by Heaven, I will. I'll hit." He called aloud, "Look here, I'm going to do what I like in this valley. Do you hear? I'm going to do what I like and go where I like!"

They were moving in upon him quickly, groping, yet moving rapidly. It was like playing blind man's buff, with everyone blindfolded except one. "Get

hold of him! " cried one. He found himself in the arc of a loose curve of pursuers. He felt suddenly he must be active and resolute.

" You don't understand," he cried in a voice that was meant to be great and resolute, and which broke, " You are blind, and I can see. Leave me alone!"

" Bogota! Put down that spade, and come off the grass! "

The last order, grotesque in its urban familiarity, produced a gust of anger.

" I'll hurt you," he said, sobbing with emotion. " By Heaven, I'll hurt you. Leave me alone!"

He began to run, not knowing clearly where to run. He ran from the nearest blind man, because it was a horror to hit him. He stopped, and then made a dash to escape from their closing ranks. He made for where a gap was wide, and the men on either side, with a quick perception of the approach of his paces, rushed in on one another. He sprang forward, and then saw he must be caught, and *swish!* the spade had struck. He felt the soft thud of hand and arm, and the man was down with a yell of pain, and he was through.

Through! And then he was close to the street of houses again, and blind men, whirling spades and stakes, were running with a sort of reasoned swiftness hither and thither.

He heard steps behind him just in time, and found a tall man rushing forward and swiping at the sound of him. He lost his nerve, hurled his spade a

yard wide at his antagonist, and whirled about and fled, fairly yelling as he dodged another.

He was panic-stricken. He ran furiously to and fro, dodging when there was no need to dodge, and in his anxiety to see on every side of him at once, stumbling. For a moment he was down and they heard his fall. Far away in the circumferential wall a little doorway looked like heaven, and he set off in a wild rush for it. He did not even look round at his pursuers until it was gained, and he had stumbled across the bridge, clambered a little way among the rocks, to the surprise and dismay of a young llama, who went leaping out of sight, and lay down sobbing for breath.

And so his *coup d'état* came to an end.

He stayed outside the wall of the valley of the Blind for two nights and days without food or shelter, and meditated upon the unexpected. During these meditations he repeated very frequently and always with a profounder note of derision the exploded proverb: "In the Country of the Blind the One-eyed Man is King." He thought chiefly of ways of fighting and conquering these people, and it grew clear that for him no practicable way was possible. He had no weapons, and now it would be hard to get one.

The canker of civilisation had got to him even in Bogota, and he could not find it in himself to go down and assassinate a blind man. Of course, if he did that he might then dictate terms on the threat of assassinating them all. But—sooner or later he must sleep! . . .

He tried also to find food among the pine trees, to be comfortable under pine boughs while the frost fell at night, and—with less confidence—to catch a llama by artifice in order to try to kill it—perhaps by hammering it with a stone—and so finally, perhaps, to eat some of it. But the llamas had a doubt of him and regarded him with distrustful brown eyes, and spat when he drew near. Fear came on him the second day and fits of shivering. Finally he crawled down to the wall of the Country of the Blind and tried to make terms. He crawled along by the stream, shouting, until two blind men came out to the gate and talked to him.

“I was mad,” he said. “But I was only newly made.”

They said that was better.

He told them he was wiser now, and repented of all he had done.

Then he wept without intention, for he was very weak and ill now, and they took that as a favourable sign.

They asked him if he still thought he could “see.”

“No,” he said. “That was folly. The word means nothing—less than nothing!”

They asked him what was overhead.

“About ten times ten the height of a man there is a roof above the world—of rock—and very, very smooth.”

He burst again into hysterical tears. “Before you ask me any more, give me some food or I shall die.”

He expected dire punishments, but these blind

people were capable of toleration. They regarded his rebellion as but one more proof of his general idiocy and inferiority; and after they had whipped him they appointed him to do the simplest and heaviest work they had for any one to do, and he, seeing no other way of living, did submissively what he was told.

He was ill for some days, and they nursed him kindly. That refined his submission. But they insisted on his lying in the dark, and that was a great misery. And blind philosophers came and talked to him of the wicked levity of his mind, and reproved him so impressively for his doubts about the lid of rock that covered their cosmic casserole that he almost doubted whether indeed he was not the victim of hallucination in not seeing it overhead.

So Nunez became a citizen of the Country of the Blind, and these people ceased to be a generalised people and became individualities and familiar to him, while the world beyond the mountains became more and more remote and unreal. There was Yacob, his master, a kindly man when not annoyed; there was Pedro, Yacob's nephew; and there was Medina-saroté, who was the youngest daughter of Yacob. She was little esteemed in the world of the blind, because she had a clear-cut face, and lacked that satisfying, glossy smoothness that is the blind man's ideal of feminine beauty; but Nunez thought her beautiful at first, and presently the most beautiful thing in the whole creation. Her closed eye-lids were not sunken and red after the common way of the valley, but lay as though they might open again at any moment; and she had long eyelashes, which

were considered a great disfigurement. And her voice was strong, and did not satisfy the acute hearing of the valley swains. So that she had no lover.

There came a time when Nunez thought that, could he win her, he would be resigned to live in the valley for all the rest of his days.

He watched her; he sought opportunities of doing her little services, and presently he found that she observed him. Once at a rest-day gathering they sat side by side in dim starlight, and the music was sweet. His hand came upon hers and he dared to clasp it. Then very tenderly she returned his pressure. And one day, as they were at their meal in the darkness, he felt her hand very softly seeking him, and as it chanced the fire leaped then and he saw the tenderness of her face.

He sought to speak to her.

He went to her one day when she was sitting in the summer moonlight spinning. The light made her a thing of silver and mystery. He sat down at her feet and told her he loved her, and told her how beautiful she seemed to him. He had a lover's voice, he spoke with a tender reverence that came near to awe, and she had never before been touched by adoration. She made him no definite answer, but it was clear his words pleased her.

After that he talked to her whenever he could take an opportunity. The valley became the world for him, and the world beyond the mountains where men lived in sunlight seemed no more than a fairy tale he would some day pour into her ears. Very tentatively and timidly he spoke to her of sight.

Sight seemed to her the most poetical of fancies, and she listened to his description of the stars and the mountains and her own sweet white-lit beauty as though it was a guilty indulgence. She did not believe, she could only half understand, but she was mysteriously delighted, and it seemed to him that she completely understood.

His love lost its awe and took courage. Presently he was for demanding her of Yacob and the elders in marriage, but she became fearful and delayed. And it was one of her elder sisters who first told Yacob that Medina-saroté and Nunez were in love.

There was from the first very great opposition to the marriage of Nunez and Medina-saroté; not so much because they valued her as because they held him as a being apart, an idiot, incompetent thing below the permissible level of a man. Her sister opposed it bitterly as bringing discredit on them all; and old Yacob, though he had formed a sort of liking for his clumsy, obedient serf, shook his head and said the thing could not be. The young men were all angry at the idea of corrupting the race, and one went so far as to revile and strike Nunez. He struck back. Then for the first time he found an advantage in seeing, even by twilight, and after that fight was over no one was disposed to raise a hand against him. But they still found his marriage impossible.

Old Yacob had a tenderness for his last little daughter, and was grieved to have her weep upon his shoulder.

"You see, my dear, he is an idiot. He has delusions; he can't do anything right."

"I know," wept Medina-saroté. "But he's better than he was. He's getting better. And he's strong, dear father, and kind—stronger and kinder than any other man in the world. And he loves me—and, father, I love him."

Old Yacob was greatly distressed to find her inconsolable, and, besides—what made it more distressing—he liked Nunez for many things. So he went and sat in the windowless council-chamber with the other elders and watched the trend of the talk, and said at the proper time, "He's better than he was. Very likely some day, we shall find him as sane as ourselves."

Then afterwards one of the elders, who thought deeply, had an idea. He was the great doctor among these people, their medicine-man, and he had a very philosophical and inventive mind, and the idea of curing Nunez of his peculiarities appealed to him. One day when Yacob was present he returned to the topic of Nunez.

"I have examined Bogota," he said, "and the case is clearer to me. I think very probably he might be cured."

"That is what I have always hoped," said old Yacob.

"His brain is affected," said the blind doctor.  
The elders murmured assent.

"Now, *what* affects it?"

"Ah!" said old Yacob.

"*This*," said the doctor, answering his own question. "Those queer things that are called the eyes, and which exist to make an agreeable soft

depression in the face, are diseased, in the case of Bogota in such a way as to affect his brain. They are greatly distended, he has eyelashes, and his eyelids move and consequently his brain is in a state of constant irritation and distraction."

"Yes?" said old Yacob. "Yes?"

"And I think I may say with reasonable certainty that, in order to cure him completely, all that we need do is a simple and easy surgical operation—namely, to remove these irritant bodies."

"And then he will be sane?"

"Then he will be perfectly sane, and a quite admirable citizen."

"Thank Heaven for science!" said old Yacob, and went forth at once to tell Nunez of his happy hopes.

But Nunez's manner of receiving the good news struck him as being cold and disappointing.

"One might think," he said, "from the tone you take, that you did not care for my daughter."

It was Medina-saroté who persuaded Nunez to face the blind surgeons.

"You do not want me," he said, "to lose my gift of sight?"

She shook her head.

"My world is sight."

Her head drooped lower.

"There are the beautiful things, the beautiful little things—the flowers, the lichens among the rocks, the lightness and softness on a piece of fur, the far sky with its drifting down of clouds, the sunsets and the stars. And there is *you*. For you alone

it is good to have sight, to see your sweet, serene face, your kindly lips, your dear, beautiful hands folded together.....It is these eyes of mine you won, these eyes that hold me to you, that these idiots seek. Instead I must touch you, hear you, and never see you again. I must come under that roof of rock and stone and darkness, that horrible roof under which your imagination stoops.....No; you would not have me do that?"

A disagreeable doubt had arisen in him. He stopped, and left the thing a question.

"I wish," she said, "sometimes—" She paused.

"Yes?" said he, a little apprehensively.

"I wish sometimes—you would not talk like that."

"Like what?"

"I know it's pretty—it's your imagination. I love it but *now*—"

He felt cold. "*Now*?" he said faintly.

She sat quite still.

"You mean—you think—I should be better, better perhaps—"

He was realising things very swiftly. He felt anger, indeed, anger at the dull course of fate, but also sympathy for her lack of understanding—a sympathy near akin to pity.

"*Dear*," he said, and he could see by her whiteness how intensely her spirit pressed against the things she could not say. He put his arms about her, he kissed her ear, and they sat for a time in silence.

"If I were to consent to this?" he said at last, in a voice that was very gentle.

She flung her arms about him, weeping wildly. "Oh, if you would," she sobbed, "if only you would!"

For a week before the operation that was to raise him from his servitude and inferiority to the level of a blind citizen, Nunez knew nothing of sleep, and all through the warm sunlit hours, while the others slumbered happily, he sat brooding or wandered aimlessly, trying to bring his mind to bear on his dilemma. He had given his answer, he had given his consent, and still he was not sure. And at last work-time was over, the sun rose in splendour over the golden crests, and his last day of vision began for him. He had few minutes with Medina-saroté before she went apart to sleep.

"To-morrow," he said, "I shall see no more."

"Dear heart!" she answered, and pressed his hand with all her strength.

"They will hurt you but little," she said; "and you are going through this pain—you are going through it, dear lover, for *me*.....Dear, if a woman's heart and life can do it, I will repay you. My dearest one, my dearest with the tender voice, I will repay."

He was drenched in pity for himself and her.

He held her in his arms, and pressed his lips to hers, and looked on her sweet face for the last time. "Good-bye!" he whispered at that dear sight, "good-bye!"

And then in silence he turned away from her.

She could hear his slow retreating footsteps, and something in the rhythm of them threw her into a passion of weeping.

He had fully meant to go to a lonely place where the meadows were beautiful with white narcissus, and there remain until the hour of his sacrifice should come, but as he went he lifted up his eyes and saw the morning, the morning like an angel in golden armour, marching down the steeps.....

It seemed to him that before this splendour he, and this blind world in the valley, and his love, and all, were no more than a pit of sin.

He did not turn aside as he had meant to do, but went on, and passed through the wall of the circumference and out upon the rocks, and his eyes were always upon the sunlit ice and snow.

He saw their infinite beauty, and his imagination soared over them to the thing beyond he was now to resign for ever.

He thought of that great free world he was parted from, the world that was his own, and he had a vision of those further slopes, distance beyond distance, with Bogota, a place of multitudinous stirring beauty, a glory by day, a luminous mystery by night, a place of palaces and fountains and statues, and white houses, lying beautifully in the middle distance. He thought how for a day or so one might come through passes, drawing ever nearer and nearer to its busy streets and ways. He thought of the river journey, day by day, from great Bogota to the still vaster world beyond, through towns and villages, forest and desert places, the rushing river day by day, until its banks receded and the big steamers came splashing by, and one had reached the sea—the limitless sea, with its thousand

islands, its thousands of islands, and its ships seen dimly far away in their incessant journeyings round and about that greater world. And there, unpent by mountains, one saw the sky—the sky, not such a disc as one saw it here, but an arch of immeasurable blue, a deep of deeps in which the circling stars were floating....

His eyes scrutinised the great curtain of the mountains with a keener inquiry.

For example, if one went so, up the gully and the chimney there, then one might come out high among those stunted pines that ran round in a sort of shelf and rose still higher and higher as it passed above the gorge. And then? That talus might be managed. Thence perhaps a climb might be found to take him up to the precipice that came below the snow; and if that chimney failed, then another farther to the east might serve his purpose better. And then? Then one would be out upon the amber-lit snow there, and half-way up to the crest of those beautiful desolations.

He glanced back at the village, then turned right round and regarded it steadfastly.

He thought of Medina-saroté, and she had become small and remote.

He turned again towards the mountain wall, down which the day had come to him.

Then very circumspectly he began to climb.

When sunset came he was no longer climbing, but he was far and high. He had been higher, but he was still very high. His clothes were torn, his limbs were blood-stained, he was bruised in many

places, but he lay as if he were at his ease, and there was a smile on his face.

From where he rested the valley seemed as if it were in a pit and nearly a mile below. Already it was dim with haze and shadow, though the mountain summits around him were things of light and fire. The mountain summits around him were things of light and fire, and the little details of the rocks near at hand were drenched with subtle beauty—a vein of green mineral piercing the grey, the flash of crystal faces here and there, a minute, minutely-beautiful orange lichen close beside his face. There were deep mysterious shadows in the gorge, blue deepening into purple, and purple into a luminous darkness, and overhead was the illimitable vastness of the sky.

But he heeded these things no longer, but lay quite inactive there, smiling as if he were satisfied merely to have escaped from the valley of the Blind in which he had thought to be King.

The glow of the sunset passed, and the night came, and still he lay peacefully contented under the cold stars.

*Herbert George Wells.*

## GLEANINGS IN BUDDHA-FIELDS

From immemorial time the shores of Japan have been swept, at irregular intervals of centuries, by enormous tidal waves,—tidal waves caused by earthquakes or by submarine volcanic action. These awful sudden risings of the sea are called by the Japanese *tsunami*. The last one occurred on the evening of June 17, 1896, when a wave nearly two hundred miles long struck the north-eastern provinces of Miyagi, Iwaté and Aomori, wrecking scores of towns and villages, ruining whole districts, and destroying nearly thirty thousand human lives. The story of Hamaguchi Gohei is the story of a like calamity which happened long before the era of Meiji, on another part of the Japanese coast.

He was an old man at the time of the occurrence that made him famous. He was the most influential resident of the village to which he belonged: he had been for many years its *muraosa*, or headman; and he was not less liked than respected. The people usually called him *Ojisan*, which means Grandfather; but, being the richest member of the community, he was sometimes officially referred to as the *Chōja*. He used to advise the smaller farmers about their interests, to arbitrate their disputes, to advance them money at need, and to dispose of their rice for them on the best terms possible.

Hamaguchi's big thatched farmhouse stood at the verge of a small plateau overlooking a bay. The

plateau, mostly devoted to rice culture, was hemmed in on three sides by thickly-wooded summits. From its outer verge the land sloped down in a huge green concavity, as if scooped out, to the edge of the water; and the whole of this slope, some three-quarters of a mile long, was so terraced as to look, when viewed from the open sea, like an enormous flight of green steps, divided in the centre by a narrow white zigzag, —a streak of mountain road. Ninety thatched dwellings and a Shintō temple, composing the village proper, stood along the curve of the bay; and other houses climbed straggling up the slope from some distance on either side of the narrow road leading to The Chōja's home.

One autumn evening Hamaguchi Gohei was looking down from the balcony of his house at some preparations for a merry-making in the village below. There had been a very fine rice-crop and the peasants were going to celebrate their harvest by a dance in the court of the *ujigami*. The old man could see the festival banners (*nobori*) fluttering above the roofs of the solitary street, the strings of paper lanterns festooned between bamboo poles, the decorations of the shrine, and the brightly-coloured gathering of the young people. He had nobody with him that evening but his little grandson, a lad of ten; the rest of the household having gone early to the village. He would have accompanied them had he not been feeling less strong than usual.

The day had been oppressive; and in spite of a rising breeze there was still in the air that sort of heavy heat which, according to the experience of the

Japanese peasant, at certain seasons precedes an earthquake. And presently an earthquake came. It was not strong enough to frighten anybody; but Hamaguchi, who had felt hundreds of shocks in his time, thought it was queer,—a long, slow, spongy motion. Probably it was but the after-tremor of some immense seismic action very far away. The house crackled and rocked gently several times; then all became still again.

As the quaking ceased Hamaguchi's keen old eyes were anxiously turned toward the village. It often happens that the attention of a person gazing fixedly at a particular spot or object is suddenly diverted by the sense of something not knowingly seen at all,—by a mere vague feeling of the unfamiliar in that dim outer circle of unconscious perception which lies beyond the field of clear vision. Thus it chanced that Hamaguchi became aware of something unusual in the offing. He rose to his feet, and looked at the sea. It had darkened quite suddenly, and it was acting strangely. It seemed to be moving against the wind. *It was running away from the land.*

Within a very little time the whole village had noticed the phenomenon. Apparently no one had felt the previous motion of the ground, but all were evidently astounded by the movement of the water. They were running to the beach, and even beyond the beach, to watch it. No such ebb had been witnessed on that coast within the memory of living man. Things never seen before were making apparition; unfamiliar spaces of ribbed sand and reaches of weed-hung rock were left bare even as Hamaguchi

gazed. And none of the people below appeared to guess what that monstrous ebb signified.

Hamaguchi Gohei himself had never seen such a thing before; but he remembered things told him in his childhood by his father's father, and he knew all the traditions of the coast. He understood what the sea was going to do. Perhaps he thought of the time needed to send a message to the village, or to get the priests of the Buddhist temple on the hill to sound their big bell. . . . But it would take very much longer to tell what he might have thought than it took him to think. He simply called to his grandson:—

'Tada!—quick,—very quick! . . . Light me a torch.'

*Taimatsu*, or pine-torches, are kept in many coast dwellings for use on stormy nights, and also for use at certain Shintō festivals. The child kindled a torch at once; and the old man hurried with it to the fields, where hundreds of rice-stacks, representing most of his invested capital, stood awaiting transportation. Approaching those nearest the verge of the slope, he began to apply the torch to them,—hurrying from one to another as quickly as his aged limbs could carry him. The sun-dried stalks caught like tinder; the strengthening sea-breeze blew the blaze landward; and presently, rank behind rank, the stacks burst into flame, sending skyward columns of smoke that met and mingled into one enormous cloudy whirl. Tada, astonished and terrified, ran after his grandfather, crying,—

'Ojiisan! why? Ojiisan! why?—why?'

But Hamaguchi did not answer: he had no time to explain; he was thinking only of the four hundred lives in peril. For a while the child stared wildly at the blazing rice; then burst into tears, and ran back to the house, feeling sure that his grandfather had gone mad. Hamaguchi went on firing stack after stack, till he had reached the limit of his field; then he threw down his torch, and waited. The acolyte of the hill-temple, observing the blaze, set the big bell booming; and the people responded to the double appeal. Hamaguchi watched them hurrying in from the sands and over the beach and up from the village like a swarming of ants, and, to his anxious eyes, scarcely faster; for the moments seemed terribly long to him. The sun was going down; the wrinkled bed of the bay, and a vast sallow speckled expanse beyond it, lay naked to the last orange glow; and still the sea was fleeing toward the horizon.

Really, however, Hamaguchi did not have very long to wait before the first party of succour arrived, —a score of agile young peasants, who wanted to attack the fire at once. But the Chōja, holding out both arms, stopped them.

‘Let it burn, lads!’ he commanded,—‘let it be! I want the whole *mura* here. There is a great danger, —*taihen da!*’

The whole village was coming; and Hamaguchi counted. All the young men and boys were soon on the spot, and not a few of the more active women and girls; then came most of the older folk, and mothers with babies at their backs, and even children, —for children could help to pass water; and the

elders too feeble to keep up with the first rush could be seen well on their way up the steep ascent. The growing multitude, still knowing nothing, looked alternately, in sorrowful wonder, at the flaming fields and at the impassive face of their Chōja. And the sun went down.

'Grandfather is mad,—I am afraid of him!' sobbed Tada, in answer to a number of questions. 'He is mad. He set fire to the rice on purpose: I saw him do it!'

'As for the rice,' cried Hamaguchi, 'the child tells the truth. I set fire to the rice. . . . Are all the people here?'

The Kumi-chō and the heads of families looked about them, and down the hill, and made reply: 'All are here, or very soon will be. . . . We cannot understand this thing.'

'*Kita!*' shouted the old man at the top of his voice, pointing to the open. 'Say now if I be mad!'

Through the twilight eastward all looked, and saw at the edge of the dusky horizon a long, lean, dim line like the shadowing of a coast where no coast ever was,—a line that thickened as they gazed, that broadened as a coast-line broadens to the eyes of one approaching it, yet incomparably more quickly. For that long darkness was the returning sea, towering like a cliff, and coursing more swiftly than the kite flies.

'*Tsunami!*' shrieked the people; and then all shrieks and all sounds and all power to hear sounds were annihilated by a nameless shock heavier than any thunder, as the colossal swell smote the shore

with a weight that sent a shudder through the hills, and with a foam-burst like a blaze of sheet-lightning. Then for an instant nothing was visible but a storm of spray rushing up the slope like a cloud; and the people scattered back in panic from the mere menace of it. When they looked again, they saw a white horror of sea raving over the place of their homes. It drew back roaring, and tearing out the bowels of the land as it went. Twice, thrice, five times the sea struck and ebbed, but each time with lesser surges: then it returned to its ancient bed and stayed,—still raging, as after a typhoon.

On the plateau for a time there was no word spoken. All stared speechlessly at the desolation beneath,—the ghastliness of hurled rock and naked riven cliff, the bewilderment of scooped-up deep-sea wrack and shingle shot over the empty site of dwelling and temple. The village was not; the greater part of the fields were not; even the terraces had ceased to exist; and of all the homes that had been about the bay there remained nothing recognisable except two straw-roofs tossing madly in the offing. The after-terror of the death escaped and the stupefaction of the general loss kept all lips dumb, until the voice of Hamaguchi was heard again, observing gently,—

*'That was why I set fire to the rice.'*

He, their Chōja, now stood among them almost as poor as the poorest; for his wealth was gone—but he had saved four hundred lives by the sacrifice. Little Tada ran to him, and caught his hand, and asked forgiveness for having said naughty things.

Whereupon the people woke up to the knowledge of why they were alive, and began to wonder at the simple, unselfish foresight that had saved them; and the headmen prostrated themselves in the dust before Hamaguchi Gohei, and the people after them.

Then the old man wept a little, partly because he was happy, and partly because he was aged and weak and had been sorely tried.

'My house remains,' he said, as soon as he could find words, automatically caressing Tada's brown cheeks; 'and there is room for many. Also the temple on the hill stands; and there is shelter there for the others.'

Then he led the way to his house; and the people cried and shouted.

The period of distress was long, because in those days there were no means of quick communication between district and district, and the help needed had to be sent from far away. But when better times came, the people did not forget their debt to Hamaguchi Gohei. They could not make him rich; nor would he have suffered them to do so, even had it been possible. Moreover, gifts could never have sufficed as an expression of their reverential feeling towards him; for they believed that the ghost within him was divine. So they declared him a god, and thereafter called him Hamaguchi Daimyōjin thinking they could give him no greater honour;—and truly no greater honour in any country could be given to mortal man. And when they rebuilt the village, they built a temple to the spirit of him, and fixed above the front of it a tablet bearing his name in

Chinese text of gold ; and they worshipped him there, with prayer and with offerings. How he felt about it I cannot say ;—I know only that he continued to live in his old thatched home upon the hill, with his children and his children's children, just as humanly and simply as before, while his soul was being worshipped in the shrine below. A hundred years and more he has been dead ; but his temple, they tell me, still stands, and the people still pray to the ghost of the good old farmer to help them in time of fear or trouble.

*Lafcadio Hearn.*

## BIOGRAPHICAL ESSAYS

### NAPOLEON'S EARLY LIFE

As we think of Napoleon Bonaparte what a world of visions and memories rises before the mind! Who does not know the outward form of the greatest conqueror and captain of modern times: the small, almost dwarfish, figure, the rounded symmetry of the head, the pale olive cheek and massive brow, the nose and lips carved as it were from the purest marble of the antique world, and above all the deep-set eyes of lustrous grey, now flashing with electric fires, now veiled in impenetrable contemplation? The set of his figure is familiar too, as are the clothes in which it has been the delight of painters to portray him. We know the compact energy of his chest and shoulders, the flashing impetuosity of each gesture and movement, the white teeth and delicate hands, and the little cocked hat and long coat of grey in which he was used to ride to victory. Who has not seen him in print and picture, the gaunt young hero of the Republic charging with the flag at Arcola, the Emperor kneeling before the altar of Notre Dame in the long and sumptuous robes of his coronation, the grim leader of a haggard cavalcade treading the deadly snows of a Russian winter, the cloaked figure upon a

ship's deck with huddled shoulders and sunken chin and a far-off look of tragedy in his set and melancholy gaze? And the thoughts and feelings which glow into consciousness at the sound of this illustrious name are every whit as varied and chequered as the outward events of his life seen through the imagination of the painter. Perhaps in the whole range of history no one has aroused emotions so opposite and so intense, or within his own lifetime has claimed so much of the admiration, the fear, and the hatred of mankind. Even the colder critics of posterity view his course not only with mixed and blended judgments, but with a kind of bewilderment at the union in one life and character of so much grandeur and roguery, gold and alloy. For those to whom psychological analysis is wearisome he stands simply as the miraculous man of action, who without assistance of wealth or station mounted to the highest pinnacle of human fortune, supplying by the weight of one transcendent example a conclusive answer to the theory that the art and mystery of politics is an esoteric thing, a perquisite of pedigrees and privilege. The man of whom Madame de Staël said, that "of all the inheritance of his terrible power there remained only to the human race the deadly knowledge of some further secrets in the art of tyranny," is also the child of the Revolution, the most dazzling proof of his own democratic doctrine that in every society a career should be open to talent. And so long as men go to the past for the pathos and romance of great vicissitudes of fortune, or for the serious interest of feats of statesmanship, or for documents of human power and resolve, or for the

more elusive secrets of the passionate temperament, or else that they may win an insight into the human forces which move the world, they will continue to study the life of Napoleon, and to find in it at the very least a story as wonderful as those of the giants and fairies, and at the most the greatest explosion of human energy which in modern times has altered the politics of civilised man.

He was born at Ajaccio on August 15, 1769, the second son of Charles-Marie Bonaparte and Marie-Letizia Ramolino. His paternal stem drew its root from Florence (branches of it have been traced at Sarzana and San Miniato in Tuscany), but ever since 1529 the ancestors of Napoleon had been settled in Corsica. Here in this lovely scene of rugged mountains and dark chestnut forests and azure spaces of sky and sea the Bonapartes flourished in the esteem of their simple neighbours. Proud of its patrician origin, the family, though far from wealthy, was by the standard of that rude and primitive society reckoned to be the most prosperous in Ajaccio. Five Bonapartes served at different times on the island council. But the evidence of ancestral ability is stronger on the maternal than on the father's side. The father of Napoleon was handsome, intelligent, with a not uncommon Italian turn for poetry and rhetoric, but extravagant and restless, constantly embarrassed for money, and driven to every kind of ingenious solicitation and shift to obtain it. His mother Letizia was a woman in a thousand. Far into old age she retained the beauty of face and dignity of carriage which were hers by right of nature,

and which would have won her admiration in any company in the world. Her mind was plain and unfurnished. To the end of her life she could neither pronounce nor speak the French language without ridiculous mistakes and her economies were carried to the point of avarice; but her character was solid as a rock of granite, and as she had faced adversity with courage, so she was neither changed nor spoiled by the marvellous revolution in her fortunes. In 1793 Paoli addressed her as Cornelia, meaning that this shrewd, resolute and beautiful country-woman was fit to bear a progeny of heroes.

In the middle of the eighteenth century it was a title of honour to be a native of Corsica. Every lover of liberty had followed with sympathy the gallant struggle which the inhabitants of that small and freedom-loving island had waged, first against the odious rule of Genoa, and then against the powerful monarchy of France. The name of Pasquale Paoli, the hero of the War of Independence, the leader and law-giver of his people, was famous in every capital in Europe, and the characteristics of a country so remote, and apparently by reason of that remoteness retaining the large and simple heroism of classical times, was matter for the curiosity of travellers and politicians. Europe thought of Corsica then, as she has thought since of Greece struggling against the Turk, or of the Boer Republics of South Africa as they contested the collected might of the British Empire. And the youth of Napoleon, born in the very year in which Corsica finally passed under the dominion of France, was filled with the reverberation of

that island epic. Stories of the strokes and hazards of the patriotic war must have been everywhere around him. He learned to know how his father had drafted a proclamation to the Corsican people, and how just before his birth his mother was driven out into the woods and mountains to share the perils of the patriot army. The star of his youth was Paoli. His dream was, now to write the history of his island, now to effect its liberation from the French.

The Corsican bore a character for sobriety, courage and hardihood. Hate was for him a virtue, vengeance a duty, pardon an infamy. He felt the call of the clan like a Highlander, an Albanian, or a Zulu, and was full of the pride and self-assurance common to gallant men who have never met a superior. Vigilant and astute in his judgment of character, he was a master of dissimulation save where passion broke in and spoiled the reckoning. His standard of honour forbade theft, enjoined hospitality and tolerated woman as the drudge of the household and the field. In general his deportment was noted as grave and stoical. He was sparing of amusement, would sit at cards without a word and suffer torture without a cry; but when the seal of silence was once broken, language would stream from him like a torrent, an index of that uneasy, impatient, quarrelsome energy which was a common attribute of the race. In these and other particulars of temperament Napoleon Bonaparte was a true Corsican.

The main part of Napoleon's education was conducted not in Corsica but in France. For seven years and nine months he never set eyes upon his home or

upon his mother. When he left Ajaccio on December 15, 1778, to embark on the study of the French language at Autun, he was a child of nine, when he returned upon leave in September, 1786, he was seventeen years old and a sub-lieutenant in a regiment of artillery. Yet absence had rather quickened than dimmed the fervour of his patriotism. As a schoolboy at Brienne, and again at the military school in Paris, he felt himself an exile in an enemy's country, using a foreign tongue and compelled to associate with boys who despised him for his alien accent, his lean purse, and his lack of influential connections. The sense of isolation drove him inwards on himself. As a little child he had been quarrelsome and turbulent; he was now taciturn, morose, unpopular with his fellows, "dry as parchment," in his own words, but secretly tormented by the flames of ambition. Linguistic capacity he never possessed, but from childhood he had shown an aptitude and taste for mathematics which was further developed by his French instructors. His father had originally designed him for the navy, but the project was changed, perhaps at the boy's desire, before the five years' course at Brienne was concluded, and it was decided that he should enter the artillery, being that branch of the profession of arms in which brains and industry might most easily balance the lack of outward advantages. He had given early proof of military tastes; as he trotted down to his little school at Ajaccio he would exchange his breakfast of white bread for the coarse brown rations of the barrack, saying that he must prepare to lead the life of a soldier.

The evidence with regard to his intellectual and moral development at this period of life, though not abundant, is decisive in quality. His letters written from school are serious, lucid and practical. At fourteen he summed up the character of his elder brother Joseph, and decided that being too frivolous for the army, he should certainly be sent into the Church. At fifteen and a half, learning of the death of his father, he wrote with a precocious sense of civic service: "Our country has lost a keen, enlightened and honest citizen. It was so decreed by the Supreme Being." We are tempted to ask whether he was ever young. It is clear that even as a schoolboy he viewed the profession of arms, not as an occasion for brilliant spectacles, but as that branch of science, complete mastery of which, only to be achieved by devouring industry, was the secret of political greatness. History and geography were his absorbing passions. He would imagine himself one of Plutarch's heroes, and he found his first incitement to ambition in that famous *Discourse upon Universal History* in which Bossuet unrolls the succession of the Empires.

On October 28, 1785, Napoleon left the military school in Paris to join the artillery regiment of La Fère which was quartered at Valence. He was then a youth of sixteen years, poor, friendless, destitute of any kind of influence likely to promote his fortunes in the army. His father was dead, and Marbœuf and Boucheporn, the French officials in Corsica who had hitherto forwarded the interests of the family, were dead also. His mother was in great straits for

money, and his own pay as sub-lieutenant amounted to seventeen-and-sixpence a week. In the normal course of events six years would elapse before he became a full lieutenant, twelve years before he became a captain; in middle life he might find himself retired on half-pay with hardly enough to keep body and soul together. The grey horizon only steeled his character. Frugality was his second nature, and with no opportunities for vulgar dissipation he plunged the deeper into the world of study. "Even when I had nothing to do," he confessed afterwards, "I vaguely thought that I had no time to lose."

There was at that time in France a body of prose literature more certain and magisterial in its direction, more seductive in its rich combination of hopefulness, sentiment and wit, and therefore more cogent in its sway over the generous impulses of youth, than any which Europe had yet known. The French philosophers of the eighteenth century preached the doctrines of reason and humanity to a country swiftly rising to a consciousness that the institutions under which it lived were the relics of a barbarous and superstitious age. They attacked every part of the existing order of society, invoking the widest principles, asking the gravest questions, and exhibiting, as against the darkness and confusion of the present, the dazzling vision of a world governed by the simple rules of rational arithmetic. To this literature of humanism and revolt men of every type and temperament contributed their quota: Voltaire his easy learning and nimble wit, Turgot his grave and philosophic statesmanship, Raynal his gift of angry

declamation, Rousseau an incomparable facility for translating into musical French the confessions of a sensitive nature and the ideals of a logical mind. To an impecunious sub-lieutenant of artillery, not wholly absorbed in the technical study of his craft, contact with writers such as these was a liberal education, and in his lonely garret Bonaparte devoured the writings of the philosophers. At seventeen he was a passionate admirer of Rousseau and of Raynal, and attuned, if not to expect, at least to welcome, a political revolution in France.

During his first seven years in the army Napoleon enjoyed large and fruitful opportunities for reading. His military duties were light, his furloughs frequent and prolonged, and he had that exquisite passion for acquisition which comes once only with the first unfolding of intellectual power. "I have no resources here but work," he wrote to his mother in 1788. "I sleep very little since my illness. I go to bed at ten, I rise at four, I have only one meal a day, at three o'clock." From the philosophers he learnt to despise monks, to hate kings and to disbelieve in the doctrines of the Christian religion; but philosophy was neither his most congenial study nor the true formative influence in his life. His mind was of the positive, not of the metaphysical order. He revelled in facts and figures, analysing in detail books of history, geography and travel, that he might understand the political conditions of the world in which he lived. His early copy-books show how painstaking he could be in the tedious drudgery of accumulation. Yet the appetite for the concrete coexisted with spiritual

sensibilities of a different order, not only with those which specially belong to youth, such as the delighted acquiescence in vague ideas and indefinite emotions, but with others more purposive and ministerial to action. Romantic dreams of greatness, passionately imagined, mingled with the striving to be literal, to be free from clouds and to see men and things through plain glass. Ossian and Werther touched him with a sense of the illimitable; Corneille and Racine by their finished portraits of civic greatness. In history he found not only an encyclopædia of important facts, but "the base of the moral sciences, the torch of truth, the destroyer of prejudice." Though he practised his pen on essays and novelettes, his principal ambition was to be the historian of his native land, to exhibit the tyranny against which she had heroically struggled, and of which she was still the reluctant victim. In 1787 he began to compose some Letters on Corsica, and later on made collections at Ajaccio for an elaborate history of the island.

The Revolution which broke out in the spring of 1789 opened sudden and indefinite prospects of advancement to all the poor and disinherited in France. Bonaparte's thoughts flew to Corsica; he would help to free his countrymen from the odious yoke of the French bureaucracy. In September 1789 he obtained a furlough, and with his elder brother Joseph plunged into the whirlpool of the Corsican revolution. He declaimed in the clubs, composed hot revolutionary addresses and helped to organise a national guard. At Ajaccio, a town of fisher-folk, he was the soul of the

opposition to the priests and aristocrats. In 1790 he succeeded, by means even then judged to be unscrupulous, in securing his election as second in command of a battalion of Corsican volunteers, an appointment not held to be incompatible with his French commission, and giving him an insight into the leadership and discipline of irregular troops. Meanwhile his view of the political situation was altered by the abolition (November 30, 1789) of crown colony government in Corsica, and by the recognition of the island as a department of the new democratic monarchy of France. From that moment, though his interests were still mainly Corsican, his aversion for France was diminished. The Revolutionary Assembly had acknowledged the merits of his countrymen, had permitted Paoli to return, and had arranged for the due representation of Corsica in the parliamentary system to be created in France. But Napoleon was not destined to be ruler of the goatherds and shepherds of his native hills. As war broke out upon the Continent and as the government in Paris passed more and more under Jacobin dominion Paoli, himself a constitutional monarchist, who had owed much to English hospitality, fell under suspicion as a moderate, an Anglophile and a traitor. An expedition to Maddalena, a little island off the coast of Sardinia, miscarried owing to a naval mutiny; but in the opinion of some the failure was due to a lukewarmness shading into treachery on the part of the Dictator of Corsica. Lucien Bonaparte, then a fiery young democrat of eighteen summers, having failed to become Paoli's secretary, discovered that he was a traitor, and informed the

Jacobins of Toulon that the national hero of Corsica was fit for the guillotine. The Government in Paris accepted without examination the idle word of a young incendiary, decreed (April 2, 1793) Paoli's arrest, and ordered the three Commissioners of the Convention who were at Bastia to effect it. The news of this insult to a man who, for more than a generation, had been regarded as the father of his country, set all Corsica in flame; and surrounded by his faithful herdsmen the old General in his mountain fortress at Corte defied the French Government to do its worst. The island was upon the point of civil war, and the position of the Bonapartes, fatally compromised by the rash action of Lucien and surrounded by the fervent Paolists of Ajaccio, became at once extremely critical.

Napoleon had by this time outgrown his early enthusiasm for the French Revolution. He had passed the summer of 1792 in Paris, had watched the invasion of the Tuileries on June 20, and the massacre of the Swiss guards on August 10. His sense of soldierly discipline was outraged by the spectacle of a mob running riot, and of a regular force hacked to pieces for the want of a prompt and regular leader. "What cowards!" he exclaimed to his friend Bourrienne, as the crowd streamed into the royal palace on June 20: "How could they let in this rabble? Why don't they sweep off four or five hundred of them with the cannon? The rest would scamper home fast enough." In the midst of the revolting slaughter of August 10 he went down into the Tuileries gardens, and with the superb phrase, "Man of the South, let us save this unfortunate," stayed a Marseillais at his butcher's

work. Such scenes as these cured him of his last ideal illusions. He wrote home that the Jacobins were lunatics, that the wheel of State was turned by a pack of vile intriguers, and that the people, viewed at close quarters, was unworthy of the efforts expended in courting its favour. From the distractions and fever of the Terror he found a refuge in "the sublime science" of astronomy.

Returning to Corsica in the autumn with a captain's rank, Napoleon learned that his family stood in the shade of Paoli's displeasure. The uncrowned King of Corsica had done nothing to help, and therefore had done much to hinder, the candidature of Joseph for the French Convention. He was in truth a Republican of the old school, doubtful of these Jacobinical young Bonapartes, who were in league with suspected or declared enemies. Nevertheless Napoleon continued to cultivate relations with the man who still claimed the allegiance of the better part of the island. He commanded the artillery in the unfortunate expedition to Maddalena, and when the news came to Ajaccio that the arrest of Paoli was decreed, he composed an address to the Convention, protesting in warm and generous terms against so flagrant an injustice to a great and honourable patriot. But the struggle which had now begun in Corsica was too fierce to be assuaged by a pamphlet, however vigorous. The Bonapartes were known to be friends of Salicetti, the French commissioner at Bastia, and were therefore counted as the foes of Paoli; and Lucien's crowning act of insolence, becoming bruited at Corte, precluded any chance of reconciliation. It came to an open and unequal

war. How Napoleon was taken by the Paolists in the mountain village of Bocognano; how he escaped down the long valley to a place of hiding in Ajaccio, and thence again by sea to the north; how, soon after, his mother was waked up at midnight and with four children safely drawn from the angry town to the lovely olive groves of Milelli, and thence upon news of Paolist bands across the fragrant hills to the tower of Capitello on the gulf; how the Paolists wreaked their vengeance on the offending clan, pillaging or burning six Bonaparte houses, two gardens and a mill; and how, finally, after many escapes and wanderings, a boat sailed from Calvi harbour on June 10, 1793, carrying Napoleon and his family away from their native shores and three days later landed the homeless fugitives at Toulon—all this may be found in many books, or may be still learned from the lips of hillmen among the granite homesteads of Corsica.

That summer marked a crisis in the destiny of France. The royalists were up in arms in the West, the Girondins in Normandy, Bordeaux, Marseilles. A serious revolt broke out in Lyons. The Allies recovered Belgium, drove the French from their capital frontier posts, Condé, Mainz, Valenciennes, and threatened an advance into the heart of the country. On August 28, 1793, Toulon, the great military port in the Mediterranean received a British fleet and hoisted the flag of Louis XVII. At no time was the unity of France or the preservation of the republican government so gravely imperilled. For honest and moderate men the course of duty was by no means clear, for on the one side was a government stained by regicide and

the excesses of martial law, on the other the white flag of reaction and the advancing insult of foreign conquest.

Napoleon had no difficulty in making his election. Meanly as he thought of Paris politicians he stood for the government of the day, and in an able dialogue, the *Souper de Beaucaire*, argued against the Girondins of Marseilles that the cause of the Mountain was the cause of France. Soon afterwards, on September 16, 1793, at the request of his Corsican friend Salicetti he joined the republican army before Toulon as commander of artillery; and it was here that his quality as a soldier was first decisively shown. He saw, as none had seen before him, that the problem of the siege was to dislodge the British fleet from the inner harbour, and that the key to victory was the fort L'Eguillette on the extreme tip of the western promontory of Caire. Three months of untiring energy and fearless courage were crowned with complete success. On December 19, 1793, the troops of the Convention entered Toulon, and the horrors of the siege were soon forgotten in the disgrace of the reprisals. To the young officer who had helped to procure this brilliant and well-timed victory the government of Robespierre owed a debt of gratitude. He was promoted to the rank of brigadier-general, and in the spring of 1794 dispatched at his own suggestion to Genoa nominally to negotiate for provisions, in reality to explore the ground with a view to hostilities. But in those days the life of a republican general, however loyal and eminent, was at the mercy of any random slander or base intrigue. Bonaparte, as the friend of the younger

Robespierre and the emissary of the Terrorist government, became involved in suspicion after the revolution of Thermidor. Returning from Genoa with a mind stored with geographical knowledge, he was accused of being the plan-maker of the fallen tyrant, deprived of his military rank, and on August 12, 1794, thrown into prison at Fort Carré, near Antibes.

There was nothing compromising in his papers. He had in truth studiously avoided over-close relations with the dead dictator. When Maximilien Robespierre offered him a military command in Paris, he wisely refused it, reckoning that no head could be safe in such a city, nor could laurels be won there yet. His prudence was rewarded. On August 20, he was released, and soon afterwards restored to his rank. How essential were his talents was proved on September 21 at Dego, when an Austrian force attempting to cut the French communications with Genoa was routed, largely owing to the skilful dispositions of the general of artillery.

His heart thenceforward was set upon the Italian command. He knew the ground and had thought out a plan by which a vigorous offensive in Italy might shatter the left wing of the continental coalition. But the Government cried a halt on the Riviera, and then summoned Napoleon to join the Army of the West as an infantry brigadier. Here he would be engaged as an officer in an arm not his own, in a civil war at once desperate and inglorious, against irregular bands of royalist nobles and peasantry. He came to Paris and boldly refused to go, under pretext of illness and reckoning upon the favour of Barras and Fréron,

leaders of the dominant party who had seen and duly appreciated his work outside Toulon. For a time success crowned his resolution. He was consulted by the military committee of the Government, and drew up a new plan of campaign in Italy which was accepted and forwarded to the front. Then, by the retirement of Doulcet Pontecoulant, his patron and friend in official quarters, he was left unsheltered. The War Office awoke to his contumacy, and on September 15, 1795, just as he was expecting to be dispatched to Constantinople to organise the artillery of the Sultan, removed his name from the list of generals.

At this crisis of his fortunes Napoleon was saved by the lucky accident of an insurrection in Paris. The Convention, odious on many just accounts not only to the whole royalist connection, but to all men of moderate opinions, had excited a storm of indignation by decreeing that two-thirds of its members were to sit in the Legislative Assembly established under the new Directoral Constitution. Plain men argued that such a provision exhibited the hollowness of arrangements professedly contrived to conclude the Terror and to give to France an orderly and respectable government. What, they asked, was the use of the new constitution, with its Directory of Five, its Council of Ancients, its Council of Five Hundred, its wise and reassuring precautions against mob rule, if the ship of State was still to be steered by the old gang who had endured the September massacres, killed the King and the Queen, turned Paris into a slaughter-house, and given a recent exhibition of its clemency by doing the Dauphin to death in the Temple prison?

The National Guard, some 30,000 strong, determined to wreak vengeance upon the body which had passed the odious "Law of the Two-Thirds"; and as the Convention had but 5,000 troops under its control, the situation of the Government was gravely imperilled.

From this almost desperate position the Convention was saved on the afternoon of October 5, 1795, by the guns of General Bonaparte. He had obtained an appointment through the friendship and esteem of Barras, who on the previous evening had been placed in command of the Paris troops, and since Barras was no soldier, the brunt of the defence was borne by Napoleon. "His activity," says Thiébault, "was astonishing: he seemed to be everywhere at once; he surprised people by his laconic, clear and prompt orders; everybody was struck by the vigour of his arrangements, and passed from admiration to confidence and from confidence to enthusiasm." In street-fighting success depends upon artillery, and when Murat galloped in with the guns from the Place des Sablons the victory of the Convention was half secured. As the heads of the insurgents marched from the Church of St. Roch upon the Tuileries they were shot away by a well-directed cannonade; and after a brief struggle, and only at the cost of some 200 lives, the day was won. Had the issue been otherwise, we cannot doubt but that France would have been overwhelmed by a fresh wave of anarchy and civil war. However tarnished its credentials, however discreditable its most recent phase of policy, the Convention was at least as honest in purpose as many of its assailants, and more truly representative of the

substantial interests of France. It stood at least for three things, all of which would have been endangered by its overthrow in Vendémiaire; for the revolutionary settlement, for the unity of the nation, and for the defence of the frontiers against foreign arms. Napoleon was rewarded by the command of the Army of the Interior. In saving the Convention he had preserved for France not only a social order grounded on equality, but a regicide government committed to war.

## KING GEORGE V

The governing fact about King George is that he is a sailor. He was trained not for a throne, but for the quarter-deck of a battleship. During those formative years, when most boys are playing cricket and conjugating *amo* ashore, he was tossing about the Seven Seas, swarming up the yardarm or stoking the fire, calling at strange ports in far-off lands, learning the rough lessons of the sea, and sharing the wholesome comradeship of plain men. It was a hard school; but no king ever had a better. It brought him face to face with realities. He saw the meaning of duty and discipline, learned to respect those who labour with their hands, and entered into the life of the common people.

He owes this advantage to the fact that he had the good fortune not to be born the heir to the throne. He escaped the artificial training of monarchs in the making. His father's childhood had been a torture. He was surrounded by "influences" and by ponderous and learned souls. He received long written explanations from his father and mother on the minutest matters of conduct. He was watched day and night, haunted by guardians and tutors, was not allowed to read novels—not even Sir Walter—and did not play, for he had no play-fellows. His father held that the heir-apparent must be kept aloof from his future subjects, and must be preserved "from the contaminating influence of boys less carefully trained" than himself.

Throughout his boyhood and youth the young Prince's life was darkened by a tyrannical affection which confined him in a gilded cage, chafed him with a thousand fatuous restraints, and deafened him with lessons and exhortations. His whole pleasure-loving career was a comment on that mistaken training.

In the same way, King George's tastes are a comment on the more wholesome atmosphere which surrounded his childhood and youth. He is not the first English King to belong to the middle classes. George III was entirely middle class. But he is the first English King to belong to the working classes by the bond of a common experience. He moves among them not as a stranger from some starry social sphere, but as one to the manner born. He has reefed the sail and swabbed the deck and fed the fire. He has stood at the helm through the tempest and the night. He knows what it is to be grimy and perspiring, to have blistered hands and tired feet. In short, he knows what it is to be a working man. It is his unique merit as a king. When he goes down to Cornwall he dons the overalls of the miner, descends the pit, and explores the workings of the mine. When he is in Lancashire he goes through the mills and the foundries, looking at the machinery with the eye of a mechanic and rubbing shoulders with the operatives in the spirit of a fellow-workman. He visits the race-course perfunctorily. It is a part of the traditional business of his calling, and he is not the man to shirk what he conceives to be a duty. But when he wants a really enjoyable day he spends it among the people, at some place like the General Post Office, or the

British Museum, or the Radium Institute, or the Garden Suburb.

There is no affectation in this. It is true that he is anxious to win the goodwill of the people, and that he knows he has not his father's genial road to their hearts. But his comradeship with the common people is not an elaborate pretence to gain an end. It springs from a genuine fellow-feeling. It is the heritage of his long apprenticeship to the sea. And it carries with it the thirst of the practical artificer to know "how it is done." He has the mechanic's interest in the machinery of things, and one learns without surprise that his presents to his children are largely mechanical toys.

There is another phase of his character which is the product of his upbringing. He is the first King of Greater Britain. His father's orbit was the Continent, and the foci of his orbit were the courts of Europe. High politics, ceremonies, and acts of grace were the things that filled his official life. He knew Paris as intimately as a Cook's guide, talked German better than he talked English, fled to the Continent whenever he wanted amusement. King George is "All British." We boast of the Empire on which the sun never sets, but until now we have never had a King who had seen the Empire. King George knows it probably as well as any man of his time. It is not a splash of colour on the map, but a reality translated into terms of city and plain, mountain, veldt, and prairie, with the heaving seas between. Here he opened a Parliament, there he commanded a ship, every place he associates with some vital memory of men

and things. This knowledge colours his whole outlook. Just as surely as his father found his interest on the Continent, so King George is fascinated by the vision of the Britain that he has seen growing up overseas. King Edward belonged to the old world; King George to the new.

There is loss as well as gain in this. King Edward was singularly free from the vice of insularity. He was cosmopolitan in the best sense of that unpleasant word. He had no narrow racial prejudices, was equally at home in all company, had that note of human free-masonry which makes one indifferent to whether men are Latin or Teuton, Slav or Celt, Jew or Gentile. Perhaps, indeed, his circle was a little too heterogeneous. Certainly it was more than a little too much confined to wealthy men of a certain race.

In all this King George is the antithesis of his father. At a recent exhibition of Max Beerbohm's caricatures there was one delightful drawing that never failed to evoke a gust of laughter. It pictured a group of four distinguished friends of King Edward, men of vast wealth and influence, marching in Indian file, with doubtful and expectant faces. Underneath was the legend, "Are we as welcome as we were?" There is no doubt about the answer. They are not. King George's tastes are simple and commonplace. His father was Sybaritic; he is almost Spartan. He is constitutionally a man of plain and moderate appetites, and his life at sea emphasised his constitutional tendency. He is neither *gourmand* nor *gourmet*. The cruel slander about over-indulgence in drink was singularly

wide of the mark in regard to one who is physically as well as temperamentally inclined to asceticism. His father belonged to the *ancien régime*—to the tradition of the “good livers” and three-bottle men. King George in this, as in so many other respects, is more akin to the modern man who drinks Apollinaris and puts soda-water in his claret.

But King Edward’s cosmopolitanism saved him from one peril which besets those whose thoughts dwell exclusively on the Empire. He was never a Jingo. The presence of “foreigners” on the earth offered no puzzle to his understanding. They were a fact to be accepted, not a nuisance to be suppressed. He was proud of the Empire with a wholesome pride; but one could not conceive him declaiming with Mr. Kipling, “What do they know of England who only England know?” In a word, he was big enough to be a little Englishman, by which I mean that he knew that if England was sound at the heart it would be sound at the extremities, and that freedom was the talisman of empire. King George’s training threatened to lead him astray here. He was captured by the tawdry Imperialism of the nineties. The Jameson Raid was a misfortune because “we had gone off at half-cock; next time we would make surer work.” We did, at an infinite cost of blood and treasure. But the result was not quite what was expected, and when King George came to the throne General Botha, the commander of the foe in the Boer War, was present at the Coronation as the Premier of a loyal and free South Africa. The lesson of that great episode, coupled with the teaching of his father and the collapse

of Imperial Preference, has not been lost on King George. His enthusiasm for the overseas dominions remains; but it is purged of its youthful crudeness. He sees that an enduring Empire is not an artificial, but a natural growth, springing out of the soil of free institutions; that true Imperialism is a spiritual sympathy more than a material bondage. George III threw away the greatest jewel of the Empire at the bidding of a false and harsh Imperialism. It is for George V to make amends, and, under the advice of his Ministers, to consolidate the splendid fabric of the Empire on the principle of an unfettered confederation of free peoples, held together by common ties of blood, religion, speech, literature, tradition, and love of liberty.

That he is capable of penetrating the crust of officialism and probing to the heart of central truths was shown when, on his return from India in 1906, he used these significant words in a speech at the Guildhall:

"I cannot help thinking, from all I have heard and seen, that the task of governing India will be made all the easier if, on our part, we infuse into it a wider element of sympathy. I predict that to such sympathy there will be an ever-abundant and genuine response."

The speeches of kings are ordinarily so swathed in the cotton-wool of conventional phrases that when a plain word like this leaps out it has the effect of a blow. It was a blow that was and is needed. The disease of an arrogant contempt for the Indian had entered into our public-school administration of that country. The

King saw it, as everybody with open eyes saw it, and he said so in unmistakable words. And the effect was instantaneous. I have been told by a distinguished Indian member of the Viceroy's council that as the result of that speech a marked and happy change came over the attitude of the Anglo-Indian towards the Indian. So powerful still is the plain truth spoken from a high place.

The King has, indeed, the frankness of the sailor much more than the restraint of the monarch. His father was all diplomacy. People rarely spoke of him without using the word "tact"—that last refuge of verbal bankruptcy. Let us rejoice that it has now been decently buried. No one accuses King George of "tact." Like Mr. Biglow's candidate, he is naturally

" A plain-spoken kind o' creetur  
Thet blurts right out wut's in his head."

One might even continue the parallel further, and say that

" Ef he's one peccolar feetur  
It is a nose that wunt be led."

For he is as firm in his opinions as he is emphatic in their expression. His father was little burdened with political prejudices. His temperament was that of the diplomatist rather than that of the politician. He was the smoother of differences, and sought to create an atmosphere in which all disagreements were reconciled, and black and white were merged in grey. King George has a simpler, less equivocal mind. He sees

black and white in sharp contrast, and it is not easy for him to conceal his views under the mask of neutrality. He feels keenly, and wears a mask with difficulty. But, like most frank natures, he is responsive to eager and forceful personalities, and Mr. Chamberlain and Mr. Lloyd George have in turn made a deep impression upon him. He has the love of the direct mind for the man who is forging straight ahead for a definite port. He is disposed to think that the port must be right if the captain is driving there confidently under a full head of steam.

There is, in short, no subtlety or cunning in his intellectual composition. It is the mind of the seaman, whose problems are the problems of facts and not of psychology or casuistry or compromise. And his tastes and pleasures are the seaman's too. He loves his home with an antiquated passion that would fill Mr. Bernard Shaw's soul with loathing. Courts are not commonly the scene of happy domesticities. Family life, which needs fresh air and freedom, struggles vainly in that hot-house atmosphere of ceremonies, formalities, and official friendships, where intrigues and back-stair influences flourish luxuriantly. But King George in this matter, as in so many others, including personal appearance, strongly resembles his cousin, the Tsar of Russia. And he has been singularly happy in his marriage.

The Queen, like her husband, has the middle-class seriousness and sense of duty. She is almost the only woman in society who cannot be called "a society woman." Her manner is entirely free from

the assertiveness which is the note of modern breeding. She speaks little, and without persiflage, irony, or any of the qualities most cultivated in drawing-rooms. The mother who, hearing the King speak, regretted that she had sent her daughter to an expensive boarding-school to catch the authentic note of the aristocracy when, after all, the King himself spoke "just like an ordinary man," would have suffered a double measure of regret if she had heard the quiet, unaffected speech of the Queen. She was trained in an old tradition of womanhood, and has the air and interests of the mid-Victorian time rather than those of to-day. When with the present Bishop of Birmingham I had the duty of showing her round the Sweated Industries Exhibition held at the Queen's Hall, I was impressed by the quiet thoroughness of her inquiry. She had obviously not come to see or to be seen, but to learn a lesson, and one could not fail to notice her plain sincerity, and her avoidance of those futile affectations of sympathy which are at once so banal and so popular. She left a clear impression of a real woman, with a grave bearing and no false sentiment. When she pats an orphan on the head or gives sixpence to a beggar I do not think she would want half a column of laudation in the newspapers to commemorate the fact that she shares the common sympathies of humanity.

The influence of her steady, prosaic personality upon the King has been eminently good, and the happiness of their home life is a commonplace. Perhaps the Court is less gay than it used to be, for the Queen prefers knitting to ceremony, and the King

likes a book better than bridge, and his children better than either. When one of the boys was asked whether he loved his mother or father the more he replied, "Well, dada spoils me most." But what the Court has lost in gaiety it has gained in many more substantial ways, not least in the matter of public respect. It was the home life of George III which made him possible in spite of his mischievous policy. There was a certain truth in the saying of the wit that "the people would never desert him so long as he went to church every Sunday and was faithful to the plainest woman in the kingdom." King George's attachment to his home is not the least of his assets in his account with his people.

It is not surprising that he felt with such bitterness the slander on that home. For years it had been said that as a youth he had contracted a marriage at Malta. At first the lady was a daughter of an Admiral Tryon, and when it was discovered that Admiral Tryon hadn't a daughter she became the daughter of an Admiral Seymour. The story was a wicked invention, but that did not prevent its being widely believed. The backwoods and the bush knew all about it, and the American papers could even show you the "marriage lines." Everywhere you met people who knew the lady, or had an aunt who knew her aunt, or had lunched with someone who lived in the same street and saw her pass every day with a pale face and a poodle. The slander was denied, but what of that? Virtue can be soiled with a breath; but scandal is a tougher growth. As Falstaff said of the camomile, the more it is trodden on

the better it grows. King Edward would have taken it all in the day's work. Scandal ran off him like water off a duck's back. "They say! What say they? Let them say." He would have lit another cigar, cocked his hat at a sporting angle, and passed on his way beaming. He took the comedy view of life. King George is a man of different mettle—serious in mind and combative in spirit, one who does not take things lying down. He leapt at the throat of the slander. Defiant of advice and of the head-shakings of the public, he dragged the thing into court, and like all lies, it fell dead in the light. There was never a more complete exposure, and the incident gave the public the first real glimpse of the man. It liked the glimpse. And those who had believed or half-believed the tale felt ashamed of their credulity. The dragon will give King George a wide berth in future.

Æsthetically, as in all else, he belongs to the common people. Apart from shooting, in which he excels, he has few sporting passions. Games of chance make no appeal to him, and his hobby of stamp-collecting is eminently middle class. Music and drama touch him only on the recreative side, and he prefers them both in old-fashioned and obvious forms. The modern problem-play leaves him cold, and Wagner bores him. He is not what Johnson would call "a clubbable man," and his friendships are few but firm. It is said that when he was asked to be president of a new service club in contemplation some years ago he replied, "Oh yes, but don't you think the Army and Navy could get on without

another club?" And the question, with its blunt rebuke, struck the idea dead.

A plain, direct, straight-speaking man, taking his office seriously, hating display and flummery, governed by a strong sense of duty, thoroughly obedient to the constitutional tradition of the monarchy, King George V has the prospect of a long and happy association with his people. He is neither a brilliant man, nor an eccentric. He represents the average intelligence, the traditional view, and the plain man's respect for authority, whether in morals or statecraft. His limitations are his merits, for the virtues of a modern monarch should be negative and official. The Vicar of Wakefield tells us that he "chose his wife, as she did her wedding gown, not for a fine glossy surface, but for such qualities as wear well." We may say the same of the King. The surface is unpretentious; but the material is made for wear.

*Alfred George Gardiner.*

---

## GEORGE THE THIRD

We have to glance over sixty years in as many minutes. To read the mere catalogue of characters who figured during that long period, would occupy our allotted time, and we should have all text and no sermon. England has to undergo the revolt of the American colonies; to submit to defeat and separation; to shake under the volcano of the French Revolution; to grapple and fight for the life with her gigantic enemy Napoleon; to gasp and rally after that tremendous struggle. The old society, with its courtly splendours, has to pass away; generations of statesmen to rise and disappear; Pitt to follow Chatham to the tomb; the memory of Rodney and Wolfe to be superseded by Nelson's and Wellington's glory; the old poets who unite us to Queen Anne's time to sink into their graves; Johnson to die, and Scott and Byron to arise; Garrick to delight the world with his dazzling dramatic genius, and Kean to leap on the stage and take possession of the astonished theatre. Steam has to be invented; kings to be beheaded, banished, deposed, restored. Napoleon to be but an episode, and George III is to be alive through all these varied changes, to accompany his people through all these revolutions of thought, government, society; to survive out of the old world into ours.

When I first saw England, she was in mourning for the young Princess Charlotte, the hope of the

empire. I came from India as a child, and our ship touched at an island on the way home, where my black servant took me a long walk over rocks and hills until we reached a garden, where we saw a man walking. "That is he," said the black man: "that is Bonaparte! He eats three sheep every day, and all the little children he can lay hands on!" There were people in the British dominions besides that poor Calcutta serving-man, with an equal horror of the Corsican ogre.

With the same childish attendant, I remember peeping through the colonnade at Carlton House, and seeing the abode of the great Prince Regent. I can see yet the Guards pacing before the gates of the place. The place! What place? The palace exists no more than the palace of Nebuchadnezzar. It is but a name now. Where be the sentries who used to salute as the Royal chariots drove in and out? The chariots, with the kings inside, have driven to the realms of Pluto; the tall Guards have marched into darkness, and the echoes of their drums are rolling in Hades. Where the palace once stood, a hundred little children are paddling up and down the steps to St. James's Park. A score of grave gentlemen are taking their tea at the "Athenæum Club;" as many grisly warriors are garrisoning the "United Service Club" opposite. Pall Mall is the great social Exchange of London now—the mart of news, of politics, of scandal, of rumour—the English forum, so to speak, where men discuss the last despatch from the Crimea, the last speech of Lord Derby, the next move of Lord John.

I fancy that peculiar product of the past, the fine gentleman, has almost vanished off the face of the earth, and is disappearing like the beaver or the Red Indian. We can't have fine gentlemen any more, because we can't have the society in which they lived. The people will not obey: the parasites will not be as obsequious as formerly: children do not go down on their knees to beg their parents' blessing: chaplains do not say grace and retire before the pudding: servants do not say "your honour" and "your worship" at every moment: tradesmen do not stand hat in hand as the gentleman passes: authors do not wait for hours in gentlemen's anterooms with a fulsome dedication, for which they hope to get five guineas from his lordship. In the days when there were fine gentlemen, Mr. Secretary Pitt's under-secretaries did not dare to sit down before him; but Mr. Pitt, in his turn, went down on his gouty knees to George II; and when George III spoke a few kind words to him, Lord Chatham burst into tears of reverential joy and gratitude; so awful was the idea of the monarch, and so great the distinctions of rank. Fancy Lord John Russell or Lord Palmerston on their knees whilst the Sovereign was reading a despatch, or beginning to cry because Prince Albert said something civil!

At the accession of George III, the patricians were yet at the height of their good fortune. Society recognised their superiority, which they themselves pretty calmly took for granted. They inherited not only titles and estates, and seats in the house of Peers, but seats in the House of Commons. There

were a multitude of Government places, and not merely these, but bribes of actual 500*l.* notes, which members of the House took not much shame in receiving. Fox went into Parliament at 20: Pitt when just of age: his father when not much older. It was the good time for Patricians. Small blame to them if they took and enjoyed, and over-enjoyed, the prizes of politics, the pleasures of social life.

If, in looking at the lives of princes, courtiers, men of rank and fashion, we must perforce depict them as idle, profligate, and criminal, we must make allowances for the rich man's failings, and recollect that we, too, were very likely indolent and voluptuous, had we no motive for work, a mortal's natural taste for pleasure, and the daily temptation of a large income. What could a great peer, with a great castle and park, and a great fortune, do but be splendid and idle? In these letters of Lord Carlisle's, from which I have been quoting, there is many a just complaint made by the kind-hearted young nobleman of the state which he is obliged to keep; the magnificence in which he must live; the idleness to which his position as a peer of England bound him. Better for him had he been a lawyer at his desk, or a clerk in his office;—a thousand times better chance for happiness, education, employment, security from temptation. A few years since the profession of arms was the only one which our nobles could follow. The church, the bar, medicine, literature, the arts, commerce, were below them. It is to the middle class we must look for the safety of England: the working educated men, away from Lord North's bribery in the senate; the

good clergy not corrupted into parasites by hopes of preferment; the tradesmen rising into manly opulence; the painters pursuing their gentle calling: the men of letters in their quiet studies; these are the men whom we love and like to read of in the last age. How small the grandees and the men of pleasure look beside them! how contemptible the stories of the George III court squabbles are beside the recorded talk of dear old Johnson! What is the grandest entertainment at Windsor compared to a night at the club over its modest cups, with Percy and Langton and Goldsmith and poor Bozzy at the table? I declare I think, of all the polite men of that age, Joshua Reynolds was the finest gentleman. And they were good, as well as witty and wise, those dear old friends of the past. Their minds were not debauched by excess, or effeminate with luxury. They toiled their noble day's labour: they rested, and took their kindly pleasure: they cheered their holiday meetings with generous wit and hearty interchange of thought: they were no prudes, but no blush need follow their conversation: they were merry, but no riot came out of their cups. Ah! I would have liked a night at the "Turk's Head," even though bad news had arrived from the colonies, and Doctor Johnson was growling against the rebels; to have sat with him and Goldy; and to have heard Burke, the finest talker in the world; and to have had Garrick flashing in with a story from his theatre!—I like, I say, to think of that society; and not merely how pleasant and how wise, but how *good* they were. I think it was on going home one night from the club that Edmund

Burke—his noble soul full of great thoughts, be sure, for they never left him; his heart full of gentleness—was accosted by a poor wandering woman, to whom he spoke words of kindness; and moved by the tears of this Magdalen, perhaps having caused them by the good words he spoke to her, he took her home to the house of his wife and children, and never left her until he had found the means of restoring her to honesty and labour. O you fine gentlemen! you Marches, and Selwyns, and Chesterfields, how small you look by the side of these great men!

I hold old Johnson (and shall we not pardon James Boswell some errors for embalming him for us?) to be the great supporter of the British monarchy and church during the last age—better than whole benches of bishops, better than Pitts, Norths, and the great Burke himself. Johnson had the ear of the nation: his immense authority reconciled it to loyalty, and shamed it out of irreligion. When George III talked with him, and the people heard the great author's good opinion of the sovereign, whole generations rallied to the King. Johnson was revered as a sort of oracle; and the oracle declared for church and king. What a humanity the old man had! He was a kindly partaker of all honest pleasures: a fierce foe to all sin, but a gentle enemy to all sinners. "What, boys, are you for a frolic?" he cries, when Topham Beauclerc comes and wakes him up at midnight: "I'm with you." And away he goes, tumbles on his homely old clothes, and trundles through Covent Garden with the young fellows. When he used to frequent Garrick's theatre, and had "the liberty of

the scenes," he says, "All the actresses knew me, and dropped me a courtsey as they passed to the stage." That would make a pretty picture: it is a pretty picture in my mind, of youth, folly, gaiety, tenderly surveyed by wisdom's merciful, pure eyes.

George III and his Queen lived in a very unpretending but elegant-looking house, on the site of the hideous pile under which his grand-daughter at present reposes. The King's mother inhabited Carlton House, which contemporary prints represent with a perfect paradise of a garden, with trim lawns, green arcades, and vistas of classic statues. She admired these in company with my Lord Bute, who had a fine classic taste, and sometimes counsel took and sometimes tea in the pleasant green arbours along with that polite nobleman. Bute was hated with a rage of which there have been few examples in English history. He was the butt for everybody's abuse; for Wilkes's devilish mischief; for Churchill's slashing satire; for the hooting of the mob that roasted the boot, his emblem, in a thousand bonfires; that hated him because he was a favourite and a Scotchman, calling him "Mortimer," "Lothario," I know not what names, and accusing his royal mistress of all sorts of crimes—the grave, lean, demure elderly woman, who, I dare say, was quite as good as her neighbours. Chatham lent the aid of his great malice to influence the popular sentiment against her. He assailed, in the House of Lords, "the secret influence, more mighty than the throne itself, which betrayed and clogged every administration." The most furious pamphlets echoed the cry. "Impeach

the King's mother," was scribbled over every wall at the Court end of the town, Walpole tells us. What had she done? What had Frederick, Prince of Wales, George's father, done, that he was so loathed by George II and never mentioned by George III? Let us not seek for stones to batter that forgotten grave, but acquiesce in the contemporary epitaph over him:—

“ Here lies Fred,  
Who was alive, and is dead.  
Had it been his father,  
I had much rather.  
Had it been his brother,  
Still better than another.  
Had it been his sister,  
No one would have missed her.  
Had it been the whole generation,  
Still better for the nation.  
But since 'tis only Fred,  
Who was alive, and is dead,  
There's no more to be said.”

The widow with eight children round her, prudently reconciled herself with the King, and won the old man's confidence and goodwill. A shrewd, hard, domineering, narrow-minded woman, she educated her children according to her lights, and spoke of the eldest as a dull, good boy; she kept him very close: she held the tightest rein over him: she had curious prejudices and bigotries. His uncle, the burly Cumberland, taking down a sabre once, and drawing it to amuse the child—the boy started back and turned pale. The Prince felt a generous shock: “ What must they have told him about me?” he asked.

His mother's bigotry and hatred he inherited with the courageous obstinacy of his own race; but he was a firm believer where his fathers had been free thinkers, and a true and fond supporter of the Church, of which he was the titular defender. Like other dull men, the King was all his life suspicious of superior people. He did not like Fox; he did not like Reynolds; he did not like Nelson, Chatham, Burke; he was testy at the idea of all innovations, and suspicious of all innovators. He loved mediocrities; Benjamin West was his favourite painter; Beattie was his poet. The King lamented, not without pathos, in his after-life, that his education had been neglected. He was a dull lad brought up by narrow-minded people. The cleverest tutors in the world could have done little probably to expand that small intellect, though they might have improved his tastes, and taught his perceptions some generosity.

But he admired as well as he could. There is little doubt that a letter, written by the little Princess Charlotte of Mecklenburg Strelitz,—a letter containing the most feeble commonplaces about the horrors of war, and the most trivial remarks on the blessings of peace, struck the young monarch greatly, and decided him upon selecting the young Princess as the sharer of his throne.

They say the little Princess who had written the fine letter about the horrors of war—a beautiful letter without a single blot, for which she was to be rewarded, like the heroine of the old spelling book story—was at play one day with some of her young

companions in the gardens of Strelitz, and that the young ladies' conversation was, strange to say, about husbands. "Who will take such a poor little Princess as me?" Charlotte said to her friend, Ida von Bulow, and at that very moment the postman's horn sounded, and Ida said, "Princess! there is the sweetheart." As she said, so it actually turned out. The postman brought letters from the splendid young King of England, who said, "Princess! because you have written such a beautiful letter, which does credit to your head and heart, come and be queen of Great Britain, France, and Ireland, and the true wife of your most obedient servant, George." So she jumped for joy; and went upstairs and packed all her little trunks; and set off straightway for her kingdom in a beautiful yacht, with a harpsichord on board for her to play upon, and around her a beautiful fleet, all covered with flags and streamers.

They met, and they were married, and for years they led the happiest, simplest lives sure ever led by married couple. It is said the King winced when he first saw his homely little bride; but, however that may be, he was a true and faithful husband to her, as she was a faithful and loving wife. They had the simplest pleasures—the very mildest and simplest—little country dances, to which a dozen couple were invited, and where the honest King would stand up and dance for three hours at a time to one tune; after which delicious excitement they would go to bed without any supper (the Court people grumbling sadly at that absence of

supper), and get up quite early the next morning, and perhaps the next night have another dance; or the Queen would play on the spinet—she played pretty well, Haydn said—or the King would read to her a paper out of the *Spectator*, or perhaps one of Ogden's sermons. O Arcadia! what a life it must have been! There used to be Sunday drawing-rooms at Court; but the young King stopped these, as he stopped all that godless gambling whereof we have made mention. Not that George was averse to any innocent pleasures, or pleasures which he thought innocent. He was a patron of the arts, after his fashion; kind and gracious to the artists whom he favoured, and respectful to their calling. He wanted once to establish an Order of Minerva for literary and scientific characters: the knights were to take rank after the knights of the Bath, and to sport a straw-coloured ribbon and a star of sixteen points. But there was such a row amongst the *literati* as to the persons who should be appointed, that the plan was given up, and Minerva and her star never came down amongst us.

There is something to me exceedingly touching in that simple early life of the King's. As long as his mother lived—a dozen years after his marriage with the little spinet-player—he was a great, shy, awkward boy, under the tutelage of that hard parent. She must have been a clever, domineering, cruel woman. She kept her household lonely and in gloom, mistrusting almost all people who came about her children. Seeing the young Duke of Gloucester silent and unhappy once, she sharply asked him the

cause of his silence. "I am thinking," said the poor child. "Thinking, sir! and of what?" "I am thinking if ever I have a son I will not make him so unhappy as you make me." The other sons were all wild except George. Dutifully every evening George and Charlotte paid their visit to the King's mother at Carlton House. She had a throat-complaint, of which she died; but to the last persisted in driving about the streets to show she was alive. The night before her death the resolute woman talked with her son and daughter-in-law as usual, went to bed, and was found dead there in the morning. "George, be a king!" were the words which she was for ever croaking in the ears of her son: and a king the simple, stubborn, affectionate, bigoted man tried to be.

He did his best; he worked according to his lights; what virtue he knew, he tried to practise; what knowledge he could master, he strove to acquire. He was for ever drawing maps, for example and learned geography with no small care and industry. But, as one thinks of an office, almost divine, performed by any mortal man—of any single being pretending to control the thoughts, to direct the faith, to order the implicit obedience of brother millions, to compel them into war at his offence or quarrel; to command, "In this way you shall trade, in this way you shall think; these neighbours shall be your allies whom you shall help, these others your enemies whom you shall slay at my orders; in this way you shall worship God;"—who can wonder that, when such a man as George took such an office

on himself, punishment and humiliation should fall upon people and chief?

Yet there is something grand about his courage. The battle of the King with his aristocracy remains yet to be told by the historian who shall view the reign of George more justly than the trumpety panegyrists who wrote immediately after his decease. It was he, with the people to back him, who made the war with America; it was he and the people who refused justice to the Roman Catholics; and on both questions he beat the patricians. He bribed: he bullied: he darkly dissembled on occasion: he exercised a slippery perseverance, and a vindictive resolution, which one almost admires as one thinks his character over. His courage was never to be beat. It trampled North under foot: it beat the stiff neck of the younger Pitt: even his illness never conquered that indomitable spirit. As soon as his brain was clear, it resumed the scheme, only laid aside when his reason left him: as soon as his hands were out of the strait-waistcoat, they took up the pen and the plan which had engaged him up to the moment of his malady. I believe it is by persons believing themselves in the right that nine-tenths of the tyranny of this world has been perpetrated. Arguing on that convenient premise, the Dey of Algiers would cut off twenty heads of a morning; Father Dominic would burn a score of Jews in the presence of the Most Catholic King, and the Archbishops of Toledo and Salamanca sing Amen. Protestants were roasted, Jesuits hung and quartered at Smithfield, and witches burned at Salem, and all

by worthy people, who believed they had the best authority for their actions.

And so, with respect to old George, even Americans, whom he hated, and who conquered him, may give him credit for having quite honest reasons for oppressing them. Appended to Lord Brougham's biographical sketch of Lord North, are some autograph notes of the King, which let us most curiously into the state of his mind. "The times certainly require," says he, "the concurrence of all who wish to prevent anarchy. I have no wish but the prosperity of my own dominions, therefore I must look upon all who would not heartily assist me as bad men, as well as bad subjects." That is the way he reasoned. "I wish nothing but good, therefore every man who does not agree with me is a traitor and a scoundrel." Remember that he believed himself anointed by a Divine commission; remember that he was a man of slow parts and imperfect education; that the same awful will of heaven which placed a crown upon his head, which made him tender to his family, pure in his life, courageous and honest, made him dull of comprehension, obstinate of will, and at many times deprived him of reason. He was the father of his people; his rebellious children must be flogged into obedience. He was the defender of the Protestant faith; he would rather lay that stout head upon the block than that Catholics should have a share in the government of England. And you do not suppose that there are not honest bigots enough in all countries to back kings in this kind of statesmanship? Without doubt the American war was popular in

England. In 1775 the address in favour of coercing the colonies was carried by 304 to 105 in the Commons, by 104 to 29 in the House of Lords. Popular?—so was the Revocation of the Edict of Nantes popular in France: so was the massacre of St. Bartholomew: so was the Inquisition exceedingly popular in Spain.

King George's household was a model of an English gentleman's household. It was early; it was kindly; it was charitable; it was frugal; it was orderly; it must have been stupid to a degree which I shudder now to contemplate. No wonder all the princes ran away from the lap of that dreary domestic virtue. It always rose, rode, dined at stated intervals. Day after day was the same. At the same hour at night the King kissed his daughters' jolly cheeks; the Princesses kissed their mother's hand; and Madame Thielke brought the royal night-cap. At the same hour the equerries and women in waiting had their little dinner, and cackled over their tea. The King had his backgammon or his evening concert; the equerries yawned themselves to death in the anteroom; or the King and his family walked on Windsor slopes, the King holding his darling little Princess Amelia by the hand; and the people crowded round quite good-naturedly; and the Eton boys thrust their chubby cheeks under the crowd's elbows; and the concert over, the King never failed to take his enormous cocked-hat off, and salute his hand, and say, "Thank you, gentlemen."

A quieter household, a more prosaic life than this of Kew or Windsor, cannot be imagined. Rain or

shine, the King rode every day for hours, poked his red face into hundreds of cottages round about, and showed that shovel-hat and Windsor uniform to farmers, to pig-boys, to old women making apple dumplings; to all sorts of people, gentle and simple, about whom countless stories are told. Nothing can be more undignified than these stories. When Haroun Alraschid visits a subject incog., the latter is sure to be very much the better for the caliph's magnificence. Old George showed no such royal splendour. He used to give a guinea sometimes: sometimes feel in his pockets and find he had no money: often ask a man a hundred questions: about the number of his family, about his oats and beans, about the rent he paid for his house, and ride on. On one occasion he played the part of King Alfred, and turned a piece of meat with a string at a cottager's house. When the old woman came home, she found a paper with an enclosure of money, and a note written by the royal pencil: "Five guineas to buy a jack." It was not splendid, but it was kind and worthy of Farmer George. One day, when the King and Queen were walking together, they met a little boy—they were always fond of children, the good folks—and patted the little white head. "Whose little boy are you?" asks the Windsor uniform. "I am the King's beefeater's little boy," replied the child. On which the King said, "Then kneel down, and kiss the Queen's hand." But the innocent offspring of the beefeater declined this treat. "No," said he, "I won't kneel, for if I do, I shall spoil my new breeches." The thrifty King ought to have hugged

him and knighted him on the spot. George's admirers wrote pages and pages of such stories about him. One morning, before anybody else was up, the King walked about Gloucester town; pushed over Molly the housemaid with her pail, who was scrubbing the doorsteps; ran upstairs and woke all the equerries in their bedrooms; and then trotted down to the bridge, where, by this time, a dozen of louts were assembled. "What! is this Gloucester New Bridge?" asked our gracious monarch; and the people answered him, "Yes, your Majesty." "Why, then, my boys," said he, "let us have a huzzay!" After giving them which intellectual gratification, he went home to breakfast. Our fathers read these simple tales with fond pleasure; laughed at these very small jokes; liked the old man who poked his nose into every cottage; who lived on plain wholesome roast and boiled; who despised your French kickshaws; who was a true hearty old English gentleman. You may have seen Gilray's famous print of him—in the old wig, in the stout old hideous Windsor uniform—as the King of Brobdingnag, peering at a little Gulliver, whom he holds up in his hand, whilst in the other he has an opera-glass, through which he surveys the pigmy? Our fathers chose to set up George as the type of a great king; and the little Gulliver was the great Napoleon. We prided ourselves on our prejudices; we blustered and bragged with absurd vainglory; we dealt to our enemy a monstrous injustice of contempt and scorn; we fought him with all weapons, mean as well as heroic. There was no lie we would not believe; no charge of crime which

our furious prejudice would not credit. I thought at one time of making a collection of the lies which the French had written against us, and we had published against them during the war; it would be a strange memorial of popular falsehood.

The Queen's character is represented in "Burney" at full length. She was a sensible, most decorous woman; a very grand lady on state occasions, simple enough in ordinary life; well read as times went, and giving shrewd opinions about books; stingy, but not unjust; not generally unkind to her dependants, but invincible in her notions of etiquette, and quite angry if her people suffered ill-health in her service. She gave Miss Burney a shabby pittance and led the poor young woman a life which well-nigh killed her. She never thought but that she was doing Burney the greatest favour, in taking her from freedom, fame, and competence, and killing her off with languor in that dreary court. It was not dreary to her. Had she been servant instead of mistress, her spirit would never have broken down: she never would have put a pin out of place, or been a moment from her duty. *She* was not weak, and she could not pardon those who were. She was perfectly correct in life, and she hated poor sinners with a rancour such as virtue sometimes has. She must have had awful private trials of her own: not merely with her children, but with her husband in those long days about which nobody will ever know anything now; when he was not quite insane; when his incessant tongue was babbling folly, rage, persecution; and she

had to smile and be respectful and attentive under this intolerable ennui. The Queen bore all her duties stoutly, as she expected others to bear them. At a State christening, the lady who held the infant was tired and looked unwell, and the Princess of Wales asked permission for her to sit down. "Let her stand," said the Queen, flicking the snuff off her sleeve. *She* would have stood, the resolute old woman, if she had had to hold the child till his beard was grown. "I am seventy years of age," the Queen said, facing a mob of ruffians who stopped her sedan: "I have been fifty years Queen of England, and I never was insulted before." Fearless, rigid, unforgiving little queen! I don't wonder that her sons revolted from her.

From November, 1810, George III ceased to reign. All the world knows the story of his malady: all history presents no sadder figure than that of the old man, blind and deprived of reason, wandering through the rooms of his palace, addressing imaginary parliaments, reviewing fancied troops, holding ghostly courts. I have seen his picture as it was taken at this time, hanging in the apartment of his daughter, the Landgravine of Hesse Hombourg—amidst books and Windsor furniture, and a hundred fond reminiscences of her English home. The poor old father is represented in a purple gown, his snowy beard falling over his breast—the star of his famous Order still idly shining on it. He was not only sightless: he became utterly deaf. All light, all reason, all sound of human voices, all the pleasures of this world of God, were taken from him. Some slight

lucid moments he had; in one of which, the Queen, desiring to see him, entered the room, and found him singing a hymn, and accompanying himself at the harpsichord. When he had finished, he knelt down and prayed aloud for her, and then for his family and then for the nation, concluding with a prayer for himself, that it might please God to avert his heavy calamity from him, but if not, to give him resignation to submit. He then burst into tears, and his reason again fled.

What preacher need moralize on this story; what words save the simplest are requisite to tell it? It is too terrible for tears. The thought of such a misery smites me down in submission before the Ruler of kings and men, the Monarch Supreme over empires and republics, the inscrutable Dispenser of life, death, happiness, victory. "O brothers," I said to those who heard me first in America—"O brothers! speaking the same dear mother tongue—O comrades! enemies no more, let us take a mournful hand together as we stand by this royal corpse, and call a truce to battle! Low he lies to whom the proudest used to kneel once, and who was cast lower than the poorest: dead, whom millions prayed for in vain. Driven off his throne; buffeted by rude hands; with his children in revolt; the darling of his own age killed before him untimely; our Lear hangs over her breathless lips and cries, 'Cordelia, Cordelia, stay a little!'

'Vex not his ghost—oh! let him pass—he hates him  
That would upon the rack of this tough world  
Stretch him out longer!'

Hush! Strife and Quarrel, over the solemn grave!  
Sound, trumpets, a mournful march. Fall, dark  
curtain, upon his pageant, his pride, his grief, his  
awful tragedy."

*William Makepiece Thackeray.*

## SCIENCE

### THE DYING SUN

A few stars are known which are hardly bigger than the earth, but the majority are so large that hundreds of thousands of earths could be packed inside each and leave room to spare; here and there we come upon a giant star large enough to contain millions of millions of earths. And the total number of stars in the universe is probably something like the total number of grains of sand on all the sea-shores of the world. Such is the littleness of our home in space when measured up against the total substance of the universe.

This vast multitude of stars are wandering about in space. A few form groups which journey in company, but the majority are solitary travellers. And they travel through a universe so spacious that it is an event of almost unimaginable rarity for a star to come anywhere near to another star. For the most part each voyages in splendid isolation, like a ship on an empty ocean. In a scale model in which the stars are ships, the average ship will be well over a million miles from its nearest neighbour, whence it is easy to understand why a ship seldom finds another within hailing distance.

We believe, nevertheless, that some two thousand million years ago this rare event took place, and that a second star, wandering blindly through space,

happened to come within hailing distance of the sun. Just as the sun and moon raise tides on the earth, so this second star must have raised tides on the surface of the sun. But they would be very different from the puny tides which the small mass of the moon raises in our oceans; a huge tidal wave must have travelled over the surface of the sun, ultimately forming a mountain of prodigious height, which would rise ever higher and higher as the cause of the disturbance came nearer and nearer. And, before the second star began to recede, its tidal pull had become so powerful that this mountain was torn to pieces and threw off small fragments of itself, much as the crest of a wave throws off spray. These small fragments have been circulating around their parent sun ever since. They are the planets, great and small, of which our earth is one.

The sun and the other stars we see in the sky are all intensely hot—far too hot for life to be able to obtain or retain a footing on them. So also no doubt were the ejected fragments of the sun when they were first thrown off. Gradually they cooled, until now they have but little intrinsic heat left, their warmth being derived almost entirely from the radiation which the sun pours down upon them. In course of time, we know not how, when, or why, one of these cooling fragments gave birth to life. It started in simple organisms whose vital capacities consisted of little beyond reproduction and death. But from these humble beginnings emerged a stream of life which, advancing through ever greater and greater complexity, has culminated in beings whose

lives are largely centred in their emotions and ambitions, their aesthetic appreciations, and the religions in which their highest hopes and noblest aspirations lie enshrined.

Although we cannot speak with any certainty, it seems most likely that humanity came into existence in some such way as this. Standing on our microscopic fragment of a grain of sand, we attempt to discover the nature and purpose of the universe which surrounds our home in space and time. Our first impression is something akin to terror. We find the universe terrifying because of its vast meaningless distances, terrifying because of its inconceivably long vistas of time which dwarf human history to the twinkling of an eye, terrifying because of our extreme loneliness, and because of the material insignificance of our home in space—a millionth part of a grain of sand out of all the sea-sand in the world. But above all else, we find the universe terrifying because it appears to be indifferent to life like our own; emotion, ambition and achievement, art and religion all seem equally foreign to its plan. Perhaps indeed we ought to say it appears to be actively hostile to life like our own. For the most part, empty space is so cold that all life in it would be frozen; most of the matter in space is so hot as to make life on it impossible; space is traversed, and astronomical bodies continually bombarded, by radiation of a variety of kinds, much of which is probably inimical to, or even destructive of, life.

Into such a universe we have stumbled, if not exactly by mistake, at least as the result of what may

properly be described as an accident. The use of such a word need not imply any surprise that our earth exists, for accidents will happen, and if the universe goes on for long enough, every conceivable accident is likely to happen in time. It was, I think, Huxley who said that six monkeys, set to strum unintelligently on typewriters for millions of millions of years, would be bound in time to write all the books in the British Museum. If we examined the last page which a particular monkey had typed, and found that it had chanced, in its blind strumming, to type a Shakespeare sonnet, we should rightly regard the occurrence as a remarkable accident, but if we looked through all the millions of pages the monkeys had turned off in untold millions of years, we might be sure of finding a Shakespeare sonnet somewhere amongst them, the product of the blind play of chance. In the same way, millions of millions of stars wandering blindly through space for millions of millions of years are bound to meet with every kind of accident; a limited number are bound to meet with that special kind of accident which calls planetary systems into being. Yet calculation shews that the number of these can at most be very small in comparison with the total number of stars in the sky; planetary systems must be exceedingly rare objects in space.

This rarity of planetary systems is important, because so far as we can see, life of the kind we know on earth could only originate on planets like the earth. It needs suitable physical conditions for its appearance, the most important of which is a

temperature at which substances can exist in the liquid state.

The stars themselves are disqualified by being far too hot. We may think of them as a vast collection of fires scattered throughout space, providing warmth in a climate which is at most some four degrees above absolute zero—about 484 degrees of frost on our Fahrenheit scale—and is even lower in the vast stretches of space which lie out beyond the Milky Way. Away from the fires there is this unimaginable cold of hundreds of degrees of frost; close up to them there is a temperature of thousands of degrees, at which all solids melt, all liquids boil.

Life can only exist inside a narrow temperate zone which surrounds each of these fires at a very definite distance. Outside these zones life would be frozen; inside, it would be shrivelled up. At a rough computation, these zones within which life is possible, all added together, constitute less than a thousand million millionth part of the whole of space. And even inside them, life must be of very rare occurrence, for it is so unusual an accident for suns to throw off planets as our own sun has done, that probably only about one star in 100,000 has a planet revolving round it in the small zone in which life is possible.

Just for this reason it seems incredible that the universe can have been designed primarily to produce life like our own; had it been so, surely we might have expected to find a better proportion between the magnitude of the mechanism and the amount of the product. At first glance at least, life seems to be

an utterly unimportant by-product; we living things are somehow off the main line.

We do not know whether suitable physical conditions are sufficient in themselves to produce life. One school of thought holds that as the earth gradually cooled, it was natural, and indeed almost inevitable, that life should come. Another holds that after one accident had brought the earth into being, a second was necessary to produce life. The material constituents of a living body are perfectly ordinary chemical atoms—carbon, such as we find in soot or lampblack; hydrogen and oxygen, such as we find in water; nitrogen, such as forms the greater part of the atmosphere; and so on. Every kind of atom necessary for life must have existed on the new-born earth. At intervals, a group of atoms might happen to arrange themselves in the way in which they are arranged in the living cell. Indeed, given sufficient time, they would be certain to do so, just as certain as the six monkeys would be certain, given sufficient time, to type off a Shakespeare sonnet. But would they then be a living cell? In other words, is a living cell merely a group of ordinary atoms arranged in some non-ordinary way, or is it something more? Is it merely atoms, or is it atoms plus life? Or, to put it in another way, could a sufficiently skilful chemist create life out of the necessary atoms, as a boy can create a machine out of "Meccano," *and then make it go*? We do not know the answer. When it comes it will give us some indication whether other worlds in space are inhabited like ours, and so must have the greatest influence on our

interpretation of the meaning of life—it may well produce a greater revolution of thought than Galileo's astronomy or Darwin's biology.

We do, however, know that while living matter consists of quite ordinary atoms, it consists in the main of atoms which have a special capacity for coagulating into extra-ordinary large bunches or "molecules."

Most atoms do not possess this property. The atoms of hydrogen and oxygen, for instance, may combine to form molecules of hydrogen ( $H_2$  or  $H_3$ ), of oxygen or ozone ( $O_2$  or  $O_3$ ), of water ( $H_2O$ ), or of hydrogen peroxide ( $H_2O_2$ ), but none of these compounds contains more than four atoms. The addition of nitrogen does not greatly change the situation; the compounds of hydrogen, oxygen and nitrogen all contain comparatively few atoms. But the further addition of carbon completely transforms the picture; the atoms of hydrogen, oxygen, nitrogen and carbon combine to form molecules containing hundreds, thousands, and even tens of thousands, of atoms. It is of such molecules that living bodies are mainly formed. Until a century ago it was commonly supposed that some "vital force" was necessary to produce these and the other substances which entered into the composition of the living body. Then Wöhler produced urea ( $CO(NH_2)_2$ ), which is a typical animal product, in his laboratory, by the ordinary processes of chemical synthesis, and other constituents of the living body followed in due course. To-day one phenomenon after another which was at one time attributed to "vital force" is being traced to

the action of the ordinary processes of physics and chemistry. Although the problem is still far from solution, it is becoming increasingly likely that what specially distinguishes the matter of living bodies is the presence not of a "vital force," but of the quite commonplace element carbon, always in conjunction with other atoms with which it forms exceptionally large molecules.

If this is so, life exists in the universe only because the carbon atom possesses certain exceptional properties. Perhaps carbon is rather noteworthy chemically as forming a sort of transition between the metals and non-metals, but so far nothing in the physical constitution of the carbon atom is known to account for its very special capacity for binding other atoms together. The carbon atom consists of six electrons revolving around the appropriate central nucleus, like six planets revolving around a central sun; it appears to differ from its two nearest neighbours in the table of chemical elements, the atoms of boron and nitrogen, only in having one electron more than the former and one electron fewer than the latter. Yet this slight difference must account in the last resort for all the difference between life and absence of life. No doubt the reason why the six-electron atom possesses these remarkable properties resides somewhere in the ultimate laws of nature, but mathematical physics has not yet fathomed it.

So much for the surprising manner in which, so far as science can at present inform us, we came into being. And our bewilderment is only increased

when we attempt to pass from our origins to an understanding of the purpose of our existence, or to foresee the destiny which fate has in store for our race.

Life of the kind we know can only exist under suitable conditions of light and heat; we only exist ourselves because the earth receives exactly the right amount of radiation from the sun; upset the balance in either direction, of excess or defect, and life must disappear from the earth. And the essence of the situation is that the balance is very easily upset.

Primitive man, living in the temperate zone of the earth, must have watched the ice-age descending on his home with something like terror; each year the glaciers came farther down into the valleys; each winter the sun seemed less able to provide the warmth needed for life. To him, as to us, the universe must have seemed hostile to life.

We of these later days, living in the narrow temperate zone surrounding our sun and peering into the far future, see an ice-age of a different kind threatening us. Just as Tantalus, standing in a lake so deep that he only just escaped drowning, was yet destined to die of thirst, so it is the tragedy of our race that it is probably destined to die of cold, while the greater part of the substance of the universe still remains too hot for life to obtain a footing. The sun, having no extraneous supply of heat, must necessarily emit ever less and less of its life-giving radiation, and, as it does so, the temperate zone of space,

within which alone life can exist, must close in around it. To remain a possible abode of life, our earth would need to move in ever nearer and nearer to the dying sun. Yet, science tells us that, so far from its moving inwards, inexorable dynamical laws are even now driving it ever farther away from the sun into the outer cold and darkness. And, so far as we can see, they must continue to do so until life is frozen off the earth, unless indeed some celestial collision or cataclysm intervenes to destroy life even earlier by a more speedy death. This prospective fate is not peculiar to our earth; other suns must die like our own, and any life there may be on other planets must meet the same inglorious end.

Physics tells the same story as astronomy. For, independently of all astronomical considerations, the general physical principle known as the second law of thermodynamics predicts that there can be but one end to the universe—a “heat-death” in which the total energy of the universe is uniformly distributed, and all the substance of the universe is at the same temperature. This temperature will be so low as to make life impossible. It matters little by what particular road this final state is reached; all roads lead to Rome, and the end of the journey cannot be other than universal death.

Is this, then, all that life amounts to—to stumble, almost by mistake, into a universe which was clearly not designed for life, and which, to all appearances, is either totally indifferent or definitely hostile to it, to stay clinging on to a fragment of a

grain of sand until we are frozen off, to strut our tiny hour on our tiny stage with the knowledge that our aspirations are all doomed to final frustration, and that our achievements must perish with our race, leaving the universe as though we had never been?

*Sir James Jeans.*

## SCIENCE IN EDUCATION \*

When the history of Education during the nineteenth century comes to be written, one of its most striking features will be presented by the rise and growth of Science in the general educational arrangements of every civilised country. At the beginning of the century our schools and colleges were still following, with comparatively little change, the methods and subjects of tuition that had been in use from the time of the Middle Ages. But the extraordinary development of the physical and natural sciences, which has done so much to alter the ordinary conditions of life, has powerfully affected also our system of public instruction. The medieval circle of studies has been widely recognised not to supply all the mental training needed in the ampler range of modern requirement. Science has, step by step, gained a footing in the strongholds of the older learning. Not without vehement struggle, however, has she been able to intrench herself there. Even now, although her ultimate victory is assured, the warfare is by no means at an end. ✓The jealousy of the older régime and the strenuous, if sometimes blatant, belligerency of the reformers have not yet been pacified; and, from time to time, within our public schools and

\* An address to the students of Mason University College, Birmingham, at the opening of the session, on Tuesday, 4th October, 1898.

universities, there may still be heard the growls of opposition and the shouts of conflict. But these sounds are growing fainter. Even the most conservative don hardly ventures nowadays openly to denounce science and all her works. Grudgingly, it may be, but yet perforce, he has to admit the teaching of modern science to a place among the subjects which the university embraces, and in which it grants degrees. In our public schools a 'modern side' has been introduced, and even on the classical side an increasing share of the curriculum is devoted to oral and practical teaching in science. New colleges have been founded in the more important centres of population, for the purpose, more particularly, of enabling the community to obtain a thorough education in modern science.

The mainspring of this remarkable educational revolution has, doubtless, been the earnest conviction that the older learning was no longer adequate in the changed and changing conditions of our time; that vast new fields of knowledge, opened up by the increased study of nature, ought to be included in any scheme of instruction intended to fit men for the struggle of modern life, and that in this newer knowledge much might be found to minister to the highest ends of education. Nevertheless, it must be admitted that utilitarian considerations have not been wholly absent from the minds of the reformers. Science has many and far-reaching practical applications. It has called into existence many new trades and professions, and has greatly modified many of those of older date. In a thousand varied ways it has come

into the ordinary affairs of everyday life. Its cultivation has brought innumerable material benefits; its neglect would obviously entail many serious industrial disadvantages, and could not fail to leave us behind in the commercial progress of the nations of the globe.

So much have these considerations pressed upon the attention of the public in recent years that, besides all the other educational machinery to which I have referred, technical schools have been established in many towns for the purpose of teaching the theory as well as the practice of various arts and industries, and making artisans understand the nature of the processes with which their trades are concerned.

That this educational transformation, which has been advancing during the century has resulted in great benefit to the community at large can hardly be denied. Besides the obvious material gains, there has been a widening of the whole range and methods of our teaching; the old subjects are better, because more scientifically, taught, and the new subjects enlist the attention and sympathy of large classes of pupils whom the earlier studies only languidly interested. Nevertheless, it is incumbent on those who have advocated and carried out this change to ask themselves whether it has brought with it no drawbacks. They may be sure that no such extensive reform could possibly be introduced without defects appearing in it somewhere. And it is well to look these defects in the face, and, as far as may be possible, remove them. In considering how I might best discharge the duty with which I have been

honoured of addressing the students of Mason College this evening, I have thought that it might not be inappropriate if, as a representative of science, I were to venture to point out some of the drawbacks as well as the advantages of the position which science has attained in our educational system.

At the outset no impartial onlooker can fail to notice that the natural reaction against the dominance of the older learning has tended to induce an undervaluing of the benefits which that learning afforded and can still bestow. In this college, indeed, and in other institutions more specially designed for instruction in science, provision has also been made for the teaching of Latin, Greek, and the more important modern languages and literatures. But in such institutions, these subjects usually hold only a subordinate place. It can hardly be denied that generally throughout the country, even although the literary side of education still maintains its pre-eminence in our public schools and universities, it is losing ground, and that every year it occupies less of the attention of students of science. The range of studies which the science examinations demand is always widening, while the academic period within which these studies must be crowded undergoes no extension. Those students, therefore, who, whether from necessity or choice, have taken their college education in science, naturally experience no little difficulty in finding time for the absolutely essential subjects required for their degrees. Well may they declare that it is hopeless for them to attempt to engage in anything more, and especially in anything

that will not tell directly on their places in the final class-lists. With the best will in the world, and with even, sometimes, a bent for literary pursuits, they may believe themselves compelled to devote their whole time and energies to the multifarious exactions of their science curriculum.

Such a result of our latest reformation in education may be unavoidable, but it is surely matter for regret. A training in science and scientific methods, admirable as it is in so many ways, fails to supply those humanising influences which the older learning can so well impart. For the moral stimulus that comes from an association with all that is noblest and best in the literatures of the past, for the culture and taste that spring from prolonged contact with the highest models of literary expression, for the widening of our sympathies and the vivifying of our imagination by the study of history and philosophy, the teaching of science has no proper equivalents.

Men who have completed their formal education with little or no help from the older learning may be pardoned should they be apt to despise such help and to believe that they can very well dispense with it in the race of life. My first earnest advice to the science students of this College is, not to entertain this belief and to refuse to act on it. Be assured that, in your future career whatever it may be, you will find in literature a source of solace and refreshment, of strength and encouragement, such as no department of science can give you. There will come times, even to the most enthusiastic among you, when scientific

work, in spite of its absorbing interest, grows to be a weariness. At such times as these you will appreciate the value of the literary culture you may have received at school or college. Cherish the literary tastes you have acquired, and devote yourself sedulously to the further cultivation of them during such intervals of leisure as you may be able to secure.

Over and above the pleasure which communion with the best books will bring with it, two reasons of a more utilitarian kind may be given to science students why they should seek this communion. Men who have been too exclusively trained in science, or are too much absorbed in its pursuit, are not always the most agreeable members of society. They are apt to be somewhat angular and professional, contributing little that is interesting to general conversation, save when they get a chance of introducing their own science and its doings. Perhaps the greatest bore I ever met was a man of science, whose mind and training were so wholly mathematical and physical that he seemed unable to look at the simplest subject save in its physical relations, about which he would discourse till he had long exhausted the patience of the auditor whom he detained. There is no more efficacious remedy for this tendency to what is popularly known as 'shop' than the breadth and culture of mind that spring from wide reading in ancient and modern literature.

The other reason for the advice I offer you is one of which you will hardly, perhaps, appreciate the full force in the present stage of your career. One

result of the comparative neglect of the literary side of education by many men of science is conspicuously seen in their literary style. It is true that in our time we have had some eminent scientific workers, who have also been masters of nervous and eloquent English. But it is not less true that the literature of science is burdened with a vast mass of slipshod, ungrammatical and clumsy writing, wherein sometimes even the meaning of the authors is left in doubt. Let me press upon you the obvious duty of not increasing this unwieldy burden. Study the best masters of style, and when once you have made up your minds what you want to say, try to express it in the simplest, clearest, and most graceful language you can find.

Remember that, while education is the drawing out and cultivation of all the powers of the mind, no system has yet been devised that will by itself develop with equal success every one of these powers. The system under which we have been trained may have done as much for us as it can do. Each of us is thereafter left to supplement its deficiencies by self-culture. And in the ordinary science-instruction of the time one of the most obvious of these inevitable deficiencies is the undue limitation or neglect of the literary side of education. ✓

But in the science-instruction itself there are dangers regarding which we cannot be too watchful. In this college and in all the other well-organised scientific institutions of the country, the principles of science are taught orally and experimentally. Every branch of knowledge is expounded in its bearings on

other branches. Its theory is held up as the first great aim of instruction, and its practical applications are made subsequent and subordinate. Divisions of science are taught here which may have few practical applications, but which are necessary for a comprehensive survey of the whole circle of scientific truth. Now, you may possibly have heard, and in the midst of a busy industrial community you are not unlikely to hear, remarks made in criticism of this system or method of tuition. The importance of scientific training will be frankly acknowledged and even insisted upon, but you will sometimes hear this admission coupled with the proviso that the science must be of a practical kind; must, in short, be just such and no other, as will fit young men to turn it to practical use in the manufactures or industries to which they may be summoned. The critics who make this limitation boast that they are practical men, and that in their opinion theory is useless or worse for the main purposes for which they would encourage and support a great scientific school.

Now I am quite sure that those science students who have passed even a single session in Mason College can see for themselves the utter fallacy of such statements and the injury that would be done to the practical usefulness of this institution, and to the general progress of the industrial applications of science, if such short-sighted views were ever carried into effect. There can be no thorough, adequate, and effective training in science unless it be based on a comprehensive study of facts and principles, altogether apart from any economic uses to which they

may be put. Science must be pursued for her own sake, in the first instance, and without reference to any pecuniary benefits she may be able to confer. We never can tell when the most theoretical part of pure science may be capable of being turned to the most important practical uses. Who could have surmised, for instance, that in the early tentative experiments of Volta, Galvani, and others last century lay the germ of the modern world-grasping electric telegraph? Or when Wedgwood, at the beginning of this century, copied paintings by the agency of light upon nitrate of silver, who could have foretold that he was laying the foundations of the marvellous art of photography.

There can be no more pernicious doctrine than that which would measure the commercial value of science by its immediate practical usefulness, and would restrict its place in education to those only of its sub-divisions which may be of service to the industries of the present time. Such a curtailed method of instruction is not education in the true sense of the term. It is only a kind of cramming for a specific purpose, and the knowledge which it imparts, being one-sided and imperfect, is of little value beyond its own limited range. I by no means wish to undervalue the importance of technical instruction. By all means let our artisans know as much as can be taught them regarding the nature and laws of the scientific processes in which they are engaged. But it is not by mere technical instruction that we shall maintain and extend the industrial and commercial greatness of the country. If we are not only to hold

our own, but to widen the boundaries of applied science, to perfect our manufactures, and to bring new departments of Nature into the service of man, it is by broad, thorough, untrammelled scientific research that our success must be achieved.

When, therefore, you are asked to explain of what practical use are some of the branches of science in which you have been trained, do not lose patience with your questioner, nor answer him as you think such a Philistine deserves to be answered. Give him a few illustrations of the thousands of ways in which science, that might have been stigmatised by him as merely abstract and theoretical, has yet been made to minister to the practical needs of humanity. Above all, urge him to attend some of the classes of Mason College, where he will learn, in the most effectual manner, the intimate connection between theory and practice. If he chance to be wealthy, the experiment may possibly open his eyes to the more urgent needs of the institution and induce him to contribute liberally towards their satisfaction.

Among the advantages and privileges of your life at college there is one, the full significance and value of which you will better appreciate in later years. You have here an opportunity of acquiring a wide general view of the whole range of scientific thought and method. If you proceed to a science degree you are required to lay a broad foundation of acquaintance with the physical and biological sciences. You are thus brought into contact with the subjects of each great department of natural knowledge, and you learn

enough regarding them to enable you to understand their scope and to sympathise with the workers who are engaged upon them. But when your academical career is ended, no such chance of wide general training is ever likely to be yours again. You will be dragged into the whirl of life, where you will probably find little time or opportunity to travel much beyond the sphere of employment to which you may have been called. Make the most, therefore, of the advantages which in this respect you meet with here. Try to ensure that your acquaintance with each branch of science embraced in your circle of studies shall be as full and accurate as lies in your power to make it. Even in departments outside the bounds of your own tastes and ultimate requirements, do not neglect the means provided for your gaining some knowledge of them. I urge this duty, not because its diligent discharge will obviously tell in your examinations, but because it will give you that scientific culture which while enabling you to appreciate and enjoy the successive advances of other sciences than that which you may select for special cultivation, will at the same time increase your general usefulness and aid you in your own researches.

The days of Admirable Crichtons are long since past. So rapid and general is the onward march of science that not only can no man keep pace with it in every direction, but it has become almost hopelessly impossible to remain abreast of the progress in each of the several sub-divisions of even a single science. We are entering more and more upon the age of specialists. It grows increasingly difficult for the

specialists, even in kindred sciences, to remain in touch with each other. When you find yourselves fairly launched into the vortex of life you will look back with infinite satisfaction to the time when you were enabled to lay a broad and solid platform of general acquirement within the walls of this college.

Perhaps the most remarkable defect in the older or literary methods of education was the neglect of the faculty of observation. For the training of the other mental faculties ample provision was made, but for this, one of the most important of the whole, no care was taken. If a boy was naturally observant, he was left to cultivate the use of his eyes as he best might; if he was not observant, nothing was done to improve him in this respect, unless it were, here and there, by the influence of such an intelligent teacher as is described in Mrs. Barbauld's famous story of *Eyes and No Eyes*. Even when science began to be introduced into our schools, it was still taught in the old or literary fashion. Lectures and lessons were given by masters who got up their information from books, but had no practical knowledge of the subjects they taught. Class-books were written by men equally destitute of a personal acquaintance with any department of science. The lessons were learnt by rote, and not infrequently afforded opportunities rather for frolic than for instruction. Happily this state of things, though not quite extinct, is rapidly passing away. Practical tuition is everywhere coming into use, while the old-fashioned cut-and-dry lesson-book is giving way to the laboratory, the field-excursion, and the school-museum.

It is mainly through the eyes that we gain our knowledge and appreciation of the world in which we live. But we are not all equally endowed with the gift of intelligent vision. On the contrary, in no respect, perhaps, do we differ more from each other than in our powers of observation. Obviously, a man who has a quick eye to note what passes around him must, in the ordinary affairs of life, stand at a considerable advantage over another man who moves unobservantly on his course. We cannot create an observing faculty any more than we can create a memory, but we may do much to develop both. This is a feature in education of much more practical and national importance than might be supposed. I suspect that it lies closer than might be imagined to the success of our commercial relations abroad. Our prevalent system of instruction has for generations past done nothing to cultivate the habit of observation, and has thus undoubtedly left us at a disadvantage in comparison with nations that have adopted methods of tuition wherein the observing faculty is regularly trained. With our world-wide commerce we have gone on supplying to foreign countries the same manufactured goods for which our fathers found markets in all quarters of the globe. Our traders, however, now find themselves in competition with traders from other nations who have been trained to better use of their powers of observation, and who, taking careful note of the gradually changing tastes and requirements of the races which they visit, have been quick to report these changes and to take means for meeting them.

Thus, in our own centres of trade we find ourselves in danger of being displaced by rivals with sharper eyes and greater powers of adaptation.

It is the special function of science to cultivate this faculty of observation. Here in Mason College, from the very beginning of your scientific studies you have been taught to use your eyes, to watch the phenomena that appear and disappear around you, to note the sequence and relation of these phenomena, and thus, as it were, to enter beneath the surface into the very soul of things. You cannot, however, have failed to remark among your fellow-students great inequalities in their powers of observation, and great differences in the development of these powers under the very same system of instruction. And you may have noticed that, speaking generally, those class-mates who have shown the best observing faculty have taken a foremost place among their fellows. It is not a question of mere brain-power. A man may possess a colossal intellect, while his faculty of observation may be of the feeblest kind. One of the greatest mathematicians of this century who, full of honours, recently passed away from us, had so little cognisance of his surroundings, that many ludicrous stories are told of his child-like mistakes as to place and time.

The continued development of the faculty of prompt and accurate observation is a task on which you cannot bestow too much attention. Your education here must already have taught you its value. In your future career the use you make of this faculty may determine your success or your failure. But

not only have your studies in this college trained your observing powers, they have at the same time greatly widened the range of your mental vision by the variety of objects which you have been compelled to look at and examine. The same methods which have been so full of benefit to you here can be continued by you in after life. And be assured that in maintaining them in active use you will take the most effective means for securing success in the careers you may choose to follow.

But above and beyond the prospect of any material success there is a higher motive which will doubtless impel you. The education of your observing faculty has been carried on during your introduction to new realms of knowledge. The whole domain of Nature has been spread out before you. You have been taught to observe thousands of objects and processes of which, common though they may be, you had previously taken no note. Henceforth, wherever you may go, you cannot wander with ignorant or unobservant eyes. Land and sea and sky, bird and beast and flower, now awaken in you a new interest, for you have learned lessons from them that have profoundly impressed you, and you have discovered meanings in them of which you had never dreamed. You have been permitted to pass within the veil of nature, and to perceive some of the inner mechanism of this world.

Thus, your training in science has not only taught you to use your eyes, but to use them intelligently, and in such a way as to see much more in the world around you than is visible to the uninstructed man.

This widened perception might be illustrated from any department of natural science. Let me take, by way of example, the relation of the student of science towards the features and charms of landscape. It may be said that no training is needed to comprehend these beauties; that the man in the street, the holiday-maker from town, is just as competent as the man of science to appreciate them, and get quite as much pleasure out of them. We need not stop to discuss the relative amounts of enjoyment which different orders of spectators may derive from scenery; but obviously the student of science has one great advantage in this matter. Not only can he enjoy to the full all the outward charms which appeal to the ordinary eye, but he sees in the features of the landscape new charms and interests which the ordinary untrained eye cannot see. Your accomplished Professor of Geology has taught you the significance of the outer lineaments of the land. While under his guidance you have traced with delight the varied features of the lovely landscapes of the Midlands, your eyes have been trained to mark their connection with each other, and their respective places in the ordered symmetry of the whole scene. You perceive why there is here a height and there a hollow; you note what has given the ridges and vales their dominant forms and directions; you detect the causes that have spread out a meadow in one place and raised up a hill in another.

Above and beyond all questions as to the connection and origin of its several parts, the landscape appeals vividly to your imagination. You know that

it has not always worn the aspect which it presents to-day. You have observed in these ridges proofs that the sea once covered their site. You have seen the remains of long extinct shells, fishes, and reptiles that have been disinterred from the mud and silt left behind by the vanished waters. You have found evidence that not once only, but again and again, after vast lapses of time and many successive revolutions, the land has sunk beneath the ocean and has once more emerged. You have been shown traces of underground commotion, and you can point to places where, over central England, volcanoes were once active. You have learnt that the various elements of the landscape have thus been gradually put together during successive ages, and that the slow processes, whereby the characteristic forms of the ground have been carved out, are still in progress under your eye.

While, therefore, you are keenly alive to the present beauty of the scene, it speaks to you at every turn of the past. Each feature recalls some incident in the strange primeval history that has been transacted here. The succession of contrasts between what is now and what has been fills you with wonder and delight. You feel as if a new sense had been given to you, and that with its aid your appreciation of scenery has been enlarged and deepened to a marvellous degree.

And so too is it with your relation to all the other departments of Nature. The movements of the clouds, the fall of rain, the flow of brook and river, the changes of the seasons, the succession of calm and storm, do not pass before your eyes now as they

once did. While they minister to the joy of life, they speak to you of that all-embracing system of process and law that governs the world. The wayside flower is no longer to your eyes merely a thing of beauty. You have found it to be that and far more—an exquisite organism in which the several parts are admirably designed to promote the growth of the plant and to perpetuate the life of the species. Every insect and bird is now to you an embodiment of the mystery of life. The forces of Nature, once so dark and so dreaded, are now seen by you to be intelligible, orderly and capable of adaptation to the purposes of man. In the physical and chemical laboratories you have been brought into personal contact with these forces, and have learnt to direct their operations, as you have watched the manifold effects of energy upon the infinite varieties of matter.

When you have completed your course of study and leave this college, crowned, I hope, with academic distinction, there will be your future career in life to choose and follow. A small number among you may, perhaps, be so circumstanced as to be able to devote yourselves entirely to original scientific research, selecting such branches of inquiry as may have specially interested you here, and giving up your whole time and energy to investigation. A much larger number will, no doubt, enter professions where a scientific training can be turned to practical account, and you may become engineers, chemists, or medical men. But in the struggle for existence, which every year grows keener amongst us, these professions are more and more crowded, so that a

large proportion of your ranks may not succeed in finding places there, and may in the end be pushed into walks in life where there may be little or no opportunity for making much practical use of the knowledge in science which you have gained here. To those who may ultimately be thus situated it will always be of advantage to have had the mental training given in this institution, and it will probably be your own fault if, even under unfavourable conditions, you do not find, from time to time, chances of turning your scientific acquirements to account. Your indebtedness to your professors demands that you shall make the effort, and, for the credit of the college, you are bound to do your best.

Among the mental habits which your education in science has helped to foster, there are a few which I would specially commend to your attention as worthy of your most sedulous care all through life.

In the first place I would put Accuracy. You have learnt in the laboratory how absolutely essential this condition is for scientific investigation. We are all supposed to make the ascertainment of the truth our chief aim, but we do not all take the same trouble to attain it. Accuracy involves labour, and every man is not gifted with an infinite capacity for taking pains. Inexactness of observation is sure sooner or later to be detected, and to be visited on the head of the man who commits it. If his observations are incorrect, the conclusions he has drawn from them may be vitiated. Thus all the toil he has endured in a research may be rendered of no avail, and the reputation he might have gained is not only

lost but replaced by discredit. It is quite true that absolute accuracy is often unattainable; you can only approach it. But the greater the exertion you make to reach it, the greater will be the success of your investigations. The effort after accuracy will be transferred from your scientific work to your everyday life and become a habit of mind, advantageous both to yourselves and to society at large.

In the next place, I would set Thoroughness, which is closely akin to accuracy. Again, your training here has shown you how needful it is in scientific research to adopt thorough and exhaustive methods of procedure. The conditions to be taken into account are so numerous and complex, the possible combinations so manifold, before a satisfactory conclusion can be reached. A laborious collection of facts must be made. Each supposed fact must be sifted out and weighed. The evidence must be gone over again and yet again, each link in its chain being scrupulously tested. The deduction to which the evidence may seem to point must be closely and impartially scrutinised, every other conceivable explanation of the facts being frankly and fully considered. Obviously the man whose education has inured him to the cultivation of a mental habit of this kind is admirably equipped for success in any walk in life which he may be called upon to enter. The accuracy and thoroughness which you have learnt to appreciate and practise at college must never be dropped in later years. Carry them with you as watchwords, and make them characteristic of all your undertakings.

In the third place, we may take Breadth. At the outset of your scientific education you were doubtless profoundly impressed by the multiplicity of detail which met your eye in every department of natural knowledge. When you entered upon the study of one of these departments, you felt, perhaps, almost overpowered and bewildered by the vast mass of facts with which you had to make acquaintance. And yet as your training advanced, you gradually came to see that the infinite variety of phenomena could all be marshalled, according to definite laws, into groups and series. You were led to look beyond the details to the great principles that underlie them and bind them into a harmonious and organic whole. With the help of a guiding system of classification, you were able to see the connection between the separate facts, to arrange them according to their mutual relations, and thus to ascend to the great general laws under which the material world has been constructed. With all attainable thoroughness in the mastery of detail, you have been taught to combine a breadth of treatment which enables you to find and keep a leading clue even through the midst of what might seem a tangled web of confusion. There are some men who cannot see the wood for the trees, and who consequently can never attain great success in scientific investigation. Let it be your aim to master fully the details of the tree, and yet to maintain such a breadth of vision as will enable you to embrace the whole forest within your ken. I need not enlarge on the practical value of this mental habit in everyday life, nor point out the excellent

manner in which a scientific education tends to develop it.

In the fourth place, I would inculcate the habit of wide Reading in scientific literature. Although the progress of science is now too rapid for any man to keep pace with the advance of all its departments, you should try to hold yourselves in touch with at least the main results arrived at in other branches than your own; while, in that branch itself, it should be your constant aim to watch every onward step that is taken by others, and not to fall behind the van. This task you will find to be no light one. Even were it confined to a survey of the march of science in your own country, it would be arduous enough to engage much of your time. But science belongs to no country, and continues its onward advance all over the globe. If you would keep yourselves informed regarding this progress in other countries, as you are bound to do if you would not willingly be left behind, you will need to follow the scientific literature of those countries. You must be able to read at least French and German. You will find in these languages a vast amount of scientific work relating to your own department, and to this accumulated pile of published material the journals of every month continue to add. In many ways it is a misfortune that the literature of science increases so fast; but we must take the evil with the good. Practice will eventually enable you to form a shrewd judgment as to which authors or papers you may skip without serious danger of losing any valuable fact or useful suggestion.

In the fifth place, let me plead for the virtue of Patience. In a scientific career we encounter two dangers, for the avoidance of which patience is our best support and guide. When life is young and enthusiasm is boundless; when from the details which we may have laboriously gathered together we seem to catch sight of some new fact or principle, some addition of more or less importance to the sum of human knowledge, there may come upon us the eager desire to make our discovery known. We may long to be allowed to add our own little stone to the growing temple of science. We may think of the pride with which we should see our names enrolled among those of the illustrious builders by whom this temple has been slowly reared since the infancy of mankind. So we commit our observations to writing, and send them for publication. Eventually we obtain the deep gratification of appearing in print among well-known authors in science. Far be it from me to condemn this natural desire for publicity. But, as your experience grows, you will probably come to agree with me that if the desire were more frequently and energetically curbed, scientific literature would gain much thereby. There is amongst us far too much hurry in publication. We are so afraid lest our observations or deductions should be forestalled—so anxious not to lose our claim to priority, that we rush before the world, often with a half-finished performance, which must be corrected, supplemented, or cancelled by some later communication. It is this feverish haste which is largely answerable for the mass of jejune,

ill-digested, and erroneous matter that cumpers the pages of modern scientific journals. Here it is that you specially need patience. Before you venture to publish anything, take the utmost pains to satisfy yourselves that it is true, that it is new, and that it is worth putting into print. And be assured that this reticence, while it is a kindness to the literature of science, will most certainly bring with it its own reward to yourselves. It will increase your confidence, and make your ultimate contributions more exact in their facts as well as more accurate and convincing in their argument.

The other danger to which I referred as demanding patience is of an opposite kind. As we advance in our career, and the facts of our investigations accumulate around us, there will come times of depression when we seem lost in a labyrinth of detail out of which no path appears to be discoverable. We have, perhaps, groped our way through this maze, following now one clue, now another, that seemed to promise some outlet to the light. But the darkness has only closed around us the deeper, and we feel inclined to abandon the research as one in which success is, for us at least, unattainable. When this blankness of despair shall come upon you, take courage under it, by remembering that a patient study of any department of nature is never labour thrown away. Every accurate observation you have made, every ~~new~~ fact you have established, is a gain to science. You may not for a time see the meaning of these observations, nor the connection of these facts. But their meaning and connection are sure in the

and to be made out. You have gone through the labour necessary for the ascertainment of truth, and if you patiently and watchfully bide your time, the discovery of the truth itself may reward your endurance and your toil.

It is by failures as well as by successes that the true ideal of the man of science is reached. The task allotted to him in life is one of the noblest that can be undertaken. It is his to penetrate into the secrets of Nature, to push back the circumference of darkness that surrounds us, to disclose ever more and more of the limitless beauty, harmonious order and imperious law that extend throughout the universe. And while he thus enlarges our knowledge, he shows us also how Nature may be made to minister in an ever-augmenting multiplicity of ways to the service of humanity. It is to him and his conquests that the material progress of our race is mainly due. If he were content merely to look back over the realms which he has subdued, he might well indulge in jubilant feelings, for his peaceful victories have done more for the enlightenment and progress of mankind than were ever achieved by the triumphs of war. But his eye is turned rather to the future than to the past. In front of him rises the wall of darkness that shrouds from him the still unknown. What he has painfully accomplished seems to him but little in comparison with infinite possibilities that lie beyond. And so he presses onward, not self-satisfied and exultant, but rather humbled and reverential, yet full of hope and courage for the work of further conquest that lies before him.

Such is the task in which you may be called to share. When you have entered upon it and have learnt something of its trials and responsibilities, as well as of its joys and rewards, you will look back with gratitude to the training you received within the walls of this college. You will feel even more keenly than you do now how much you owe to the patient kindness and educational skill of your teachers and to the healthy stimulus of contact and competition with your class-fellows. Most heartily do I wish you success in your several careers. Following up the paths which have been opened for you here, may it be yours to enlarge still further the circle of light which science has gained, and to wrest from Nature new aids for the service of mankind.

*Sir Archibald Geikie.*

## MISCELLANEOUS

### TEMPTATION

Once, when I was going to address a gathering of young men, I asked a friend what I should speak to them about. His answer was: There is only one subject worth speaking to young men about, and that is temptation.

Of course, he did not mean this literally: he only meant to emphasize the importance of this subject. Was he not right? You remember, in the story of the Garden of Eden, where the tree which represented temptation stood? It stood in the midst of the garden—just at the point where all the walks converged, where Adam and Eve had to pass it every day. This is a parable of human life. We are out of paradise now; but the tree of temptation still stands in our life where it stood then—in the midst; where all the roads meet; where we must pass it every day—and every man's weal or woe depends on the attitude to it which he takes up.

There are six attitudes in any of which we may stand to temptation—first, we may be tempted; second, we may have fallen before temptation; third, we may be tempting others; or, fourth, we may be successfully resisting temptation; fifth, we may have outlived temptation; sixth, we may be assisting others to overcome their temptations.

As I should like these six attitudes to be remembered, let me give them names; and these I will borrow

from the politics of the continent of Europe. Any of you who may glance at times into the politics of France or Germany will be aware that in their legislative assemblies there prevails a more minute division into parties, or groups as they are called, than we are accustomed to. In your politics you are content with two great historical parties—Republicans and Democrats. But, as I have said, in Continental parliaments the members are divided into groups. You read of the group of the left centre, the group of the left and the group of the extreme left; the group of the right centre, the group of the right, and the group of the extreme right. I do not pretend that even these are all; but I will take these as the six names I need for characterizing the six attitudes in which men may stand to temptation.

On the left there are three—first, the group of the left centre, by which I mean those who are being tempted; second, the group of the left, by which are meant those who have fallen before temptation; third, the group of the extreme left, or those who are tempters of others. And on the right there are three groups—the fourth group, that of the right centre, containing those who are successfully resisting temptation; the fifth, the group of the right, or those who have outlived their temptations; and the sixth and last, the group of the extreme right, that is to say, those who are helping others to resist their temptations.

Let me run rapidly over these six groups.

I. The group of the left centre or those who are being tempted.

With this one I begin; because we have all been in it. Whether we have been in the other groups or not, we have all been in this one: we have all been tempted. One of the first things we were told when we were quite young was that we should be tempted—that we should have to beware of evil companions; and there is not one of us in whose case this prediction has not come true.

There is, indeed, no greater mystery of providence than to understand the unequal proportions in which temptation is distributed. Some are comparatively little tempted; others are thrown into a fiery furnace of it seven times heated. There are in the world sheltered situations in which a man may be compared to a ship in the harbour, where the waves may sometimes heave a little, but a real storm never comes; there are other men like the vessel which has to sail the high seas and face the full force of the tempest. Many here must know well what this means. Perhaps you know it so well that you feel inclined to say to me, Preacher, you know nothing about it; if you had to live where we live—if you had to associate with the companions whom we have to work with, and hear the kind of language which we have to listen to every hour of the day—you would know better the truth of what you are saying. Do not be too sure of that. Perhaps I know as well about it as you do. Perhaps my library is as dangerous a place for me as your workshop is for you. Solitude has its temptations as well as society. St. Anthony, before his conversion, was a gay and fast young man of Alexandria; and, when he was converted, he found the temptations of the city

so intolerable that he fled into the Egyptian desert and became a hermit; but he afterward confessed that the temptations of a cell in the wilderness were worse than those of the city. It would not be safe to exchange our temptations for those of another man; every one has his own.

I believe, further, that every man has his own tempter or temptress. Every man on his journey through life meets with some one who deliberately tries to ruin him. Have you met your tempter yet? Perhaps he is sitting by your side at this moment. Perhaps it is some one in whose society you delight to be, and of whose acquaintance you are proud; but the day may come when you will curse the hour in which you ever saw that face. Some of us, looking back, can remember well who our tempter was; and we tremble yet, sometimes, as we remember how nearly we were over the precipice.

One of the chief powers of temptation is the power of surprise. It comes when you are not looking for it; it comes from the person and from the quarter you least suspect. The day dawns which is to be the decisive one in our life; but it looks like any other day. No bell rings in the sky to give warning that the hour of destiny has come. But the good angel that watches over us is waiting and trembling. The fiery moment arrives; do we stand; do we fall? Oh, if we fall, that good angel goes flying away to heaven, crying, fallen, fallen! 

II. The group of the left or those who have fallen before temptation.

Though I do not know this audience, I know

human nature well enough to be certain that there are some hearing me who are whispering sadly in their hearts, "This is the group I belong to: I have fallen before temptation; it may not be known; it may not even be suspected; but it is true."

To such I bear a message of hope to-day.

The great tempter of men has two lies with which he plies us at two different stages. Before we have fallen, he tells us that one fall does not matter; it is a trifle; we can easily recover ourselves again. And, after we have fallen, he tells us that it is hopeless: we are given over to sin, and need not attempt to rise.

Both are false.

It is a terrible falsehood to say that to fall once does not matter. Even by one fall there is something lost that can never be recovered again. It is like the breaking of an infinitely precious vessel, which may be mended, but will never again be as if it had not been broken. And, besides, one fall leads to others; it is like going upon very slippery ice on the face of a hill; even in the attempt to rise you are carried away again farther than ever. Moreover, we give others a hold over us. If we have not sinned alone, to have sinned once involves a tacit pledge that we will sin again; and it is often almost impossible to get out of such a false position. God keep us from believing the devil's lie, that to fall once does not matter.

But then, if we have fallen, he plies us with the other lie: it is of no use to attempt to rise; you cannot overcome your besetting sin. But this is falser still. To those who feel themselves fallen I come, in Christ's name, to say, Yes, you may rise. If we could

ascend to heaven to-day and scan the ranks of the blest, should we not find multitudes among them who were once sunk low as man can fall? But they are washed, they are justified, they are sanctified, in the name of our Lord Jesus and by the Spirit of our God, and so may you be.

It is, I know, a doctrine which may be abused; but I will not scruple to preach it to those who are fallen and sighing for deliverance. St. Augustine says that we may out of our dead sins make stepping-stones to rise to the heights of perfection. What did he mean by that? He meant that the memory of our falls may breed in us such a humility, such a distrust of self, such a constant clinging to Christ as we never could have had if we had not fallen.

Does not the Scripture itself go even further? David fell—deep as man can fall; but what does he say in that great fifty-first Psalm, in which he confesses his sin? Anticipating forgiveness, he says:

Then will I teach Thy ways unto  
Those that transgressors be,  
And those that sinners are, shall then  
Be turned unto Thee.

And what did our Lord Himself say to St. Peter about his fall? "When thou art converted, strengthen thy brethren." A man may derive strength to give to others from having fallen. He may have a sympathy with the erring; he may be able to describe the steps by which to rise, as no other can. Thus, by God's marvellous grace, out of the eater may come

forth meat, and out of the strong may come forth sweetness.

III. The group of the extreme left or those who are tempters of others.

These three groups on the left form three stages of a natural descent. First, tempted; secondly, fallen; then, if we have fallen, we tempt others to fall.

This is quite natural. If we are down ourselves, we try to get others down beside us. There is a satisfaction in it. To a soul that has become black a soul that is still white is an offence. It is said of some, "They rest not except they have done mischief, and their sleep is taken away, except they cause some to fall." There is nothing else, I think, in human nature so diabolical as the delight which the wicked feel in making others like themselves. Have you never seen it? Have you never seen a group of evil-doers deliberately set themselves to ruin a newcomer, scoffing at his innocence and enticing him to their orgies? And, when they succeeded, they rejoiced over his fall as if they had won a great triumph. So low can human nature sink.

Sometimes it may be self-interest that makes man a tempter. The sin of another may be necessary to secure some end of his own. The dishonest merchant, for his own gain, undermines the honesty of his apprentice; the employer, making haste to be rich, tempts his employees to break the Sabbath; the tyrannical landlord forces his tenants to vote against their conscience. Why, there are trades which flourish on other people's sins.

But perhaps the commonest way to become a tempter is through thoughtlessness. I protest, we have no pity for each other's souls. We trample about among these most brittle and infinitely precious things, as if they were common ware, and we tempt one another and ruin one another without even being aware of it. Perhaps, indeed, no one who goes to the place of woe goes there alone; perhaps every one takes at least one with him. I hear it said nowadays that the fear of hell no longer moves men's minds; and that preachers ought no longer to make use of it as a motive in religion. Well, I confess I fear it myself; it is a motive still to me. But I will tell you what I fear ten times more. What! is there anything which a man can fear ten times more than the fire that never shall be quenched? Yes! it is to meet there any one who will say, "You have brought me here; you were my tempter; and but for you I might never have come to this place of torment." God forbid that this should ever be said to me by any one. Will it be said to any of you?

But now let us turn away from this side of our subject and look at the bright side—at the three groups on the right.

IV. The group of the right centre, or those who are successfully resisting temptation.

Not very long ago a letter chanced to come under my eye. It was by a young man attending one of the great English universities. One day two or three fellow-students had come into his rooms and asked him to join them in some amusement of a questionable kind, which they were contemplating. On the

spur of the moment he promised; but, when they had gone, he thought what his parents would say if they knew. It was a godly home he belonged to and a very happy one, in which the children were bound to the parents in such a way that they kept no secrets from them. He thought of his home, and he had doubts whether what he had promised to do might not cause pain there. He was afraid it would; and he promptly and frankly went and told his companions that his engagement was off till he should inquire. The letter I saw was the inquiry. It affected me deeply to read it; for it was easy to understand how much manliness was required to do that which might be interpreted as unmanly.

The memory of that man's home came to him in the hour of temptation and made him strong to resist. I wonder this influence does not prove a rescuing power oftener than it does. Young men, when you are tempted, think of home. I have been a minister away in a provincial town; and, I think, if you could realize the mother's terror, and the father's stricken frame, and the silent tearful circle, as I have seen them—it would make you fling the cup of temptation from your lips, however persuasive was the hand that proffered it.

Yet this will not always be a strong enough motive in the struggle with temptation. There will come times when you are tempted to great sin which will appear to you absolutely safe from discovery and not likely to inflict the slightest injury on your fortunes. In such circumstances nothing will sustain you if you do not respect your own nature and stand

in awe of your own conscience. Nay, even this is not enough; the only effective defence is that of one who was surely tempted in this very way, "How can I do this great wickedness and sin against God?"

There are secret battles fought and victories won on this ground, never heard of on earth, but essentially more glorious than many victories which are trumpeted far and wide by the breath of fame. There is more of courage and manhood needed for them than for walking up to the cannon's mouth. Many a soldier could do that who could not say "No" to two or three companions pressing him to enter the canteen. Not long ago I was speaking to a soldier who told me that many a time in the barracks he was the only man to go down on his knees out of twenty or thirty; and he did it among showers of oaths and derision. Do you think walking up to the cannon's mouth would have been difficult to that man? Such victories have no record on earth; but be sure of this, they are widely heard of in heaven, and there is One there who will not forget them.

V. The group of the right or those who have outlived their temptations.

On this point I do not mean to dwell; but I should like at least to mention it, as there is contained in it a great encouragement to some who may be enduring the very hottest fires of temptation. Perhaps your situation is so intolerable that you often say, I cannot stand this much longer; if it lasts as it is, I must fall—"One day I shall fall into the hands of Saul."

No, you will not. I bid you take courage; and as one encouragement I say, you will yet outlive your temptation.

That which is a temptation at one period of life may be no temptation at all at another. To a child there may be an irresistible temptation in a sweetmeat which a man would take a good deal to touch; and some of the temptations which are now the most painful to you will in time be as completely outlived. God may lift you, by some turn of providence, out of the position where your temptation lies; or the person from whom you chiefly suffer may be removed from your neighbourhood. The unholy fire of passion, which now you must struggle to keep out of your heart, may, through the mercy of God who setteth men in families, be burnt away and replaced by the holy fire of love burning on the altar of a virtuous home. The laughter and scorn which you may now be bearing for your Christian profession will, if you only have patience, be changed into respect and veneration; for even the ungodly are forced at last to do honour to a consistent Christian life.

In these and other ways, if you only have patience, you will outlive temptation; though I do not suppose we shall ever in this world be entirely out of its reach, or be beyond the need of these two admonitions: "Watch and pray that ye enter not into temptation," and, "Let him that thinketh he standeth take heed lest he fall."

VI. The group of the extreme right, or those who are helping others to overcome temptation.

You see, on the right there is an upward progress, as on the left there was a downward one. The first step is to be successfully resisting temptation; a higher one is to have outlived temptation; the highest of all is to be helping others to resist it; though I do not say that this must be the chronological order. It is the order of honour.

This group of the extreme right is the exact opposite of the group of the extreme left. Those in the latter group are tempting others to fall; those in this one are encouraging and aiding others to stand fast. No man ought to be satisfied till he is in this noble group.

There are many ways in which we may assist others with their temptations. A big-hearted man will often be doing so without being aware of it. His very presence, his attractive manhood, his massive character act as an encouragement to younger men and hold them up. I do not know anything so much to be coveted as in old age to have men coming to say, "Your example, your presence, your sympathy were like a protecting arm put round my stumbling youth and helped me over the perilous years." My brothers, if a few men can honestly say this to us in the future, will it not be better than Greek and Roman fame?

Many are helping the young against their temptations by providing them with means of spending their leisure innocently and profitably. Our leisure time is the problem. While we are at work, there is not so much fear of us; but it is in the hours of leisure—the hours between work and sleep—that

temptation finds men, and they are lost; and therefore I say, there is no more Christian work than providing men with opportunities of spending leisure profitably.

But by far the best way to help men with their temptations is to bring them to Christ. It may be of some service to a man if, in the time of trial, I put round him the sympathetic arm of a brother; but it is infinitely better if I can get him to allow Christ to put round him His strong arm. This is the effectual defence; and no other can be really depended on.

*James Stalker.*

---

## THE CONVALESCENT

A pretty severe fit of indisposition which, under the name of a nervous fever, has made a prisoner of me for some weeks past, and is but slowly leaving me, has reduced me to an incapacity of reflecting upon any topic foreign to itself. Expect no healthy conclusions from me this month, reader; I can offer you only sick men's dreams.

And truly the whole state of sickness is such, for what else is it but a magnificent dream for a man to lie a-bed, and draw daylight curtains about him; and, shutting out the sun, to induce a total oblivion of all the works which are going on under it? To become insensible to all the operations of life, except the beatings of one feeble pulse?

If there be a regal solitude, it is a sick bed. How the patient lords it there! what caprices he acts without control! how kinglike he sways his pillow—tumbling, and tossing, and shifting, and lowering, and thumping, and flattening, and moulding it, to the ever varying requisitions of his throbbing temples.

He changes *sides* oftener than a politician. Now he lies full-length, then half-length, obliquely, transversely, head and feet quite across the bed; and none accuses him of tergiversation. Within the four curtains he is absolute. They are his *Mare Clausum*.

How sickness enlarges the dimensions of a man's self to himself' he is his own exclusive object. Supreme selfishness is inculcated upon him as his only duty. 'Tis the Two Tables of the Law to him. He has nothing to think of but how to get well. What passes out of doors, or within them, so he hears not the jarring of them, affects him not.

A little while ago he was greatly concerned in the event of a lawsuit, which was to be the making or the marring of his dearest friend. He was to be seen trudging about upon this man's errand to fifty quarters of the town at once, jogging this witness, refreshing that solicitor. The cause was to come on yesterday. He is absolutely as indifferent to the decision, as if it were a question to be tried at Pekin. Peradventure from some whispering, going on about the house, not intended for his hearing, he picks up enough to make him understand, that things went cross-grained in the Court yesterday, and his friend is ruined. But the word "friend," and the word "ruin," disturb him no more than so much jargon. He is not to think of anything but how to get better.

What a world of foreign cares are merged in that absorbing consideration!

He has put on the strong armour of sickness; he is wrapped in the callous hide of suffering; he keeps his sympathy, like some curious vintage, under trusty lock and key, for his own use only.

He lies pitying himself, honing and moaning to himself; he yearneth over himself; his bowels are

even melted within him, to think what he suffers; he is not ashamed to weep over himself.

He is for ever plotting how to do some good to himself; studying little stratagems and artificial alleviations.

He makes the most of himself; dividing himself, by an allowable fiction, into as many distinct individuals, as he hath sore and sorrowing members. Sometimes he meditates—as of a thing apart from him—upon his poor aching head, and that dull pain which, dozing or waking, lay in it all the past night like a log, or palpable substance of pain, not to be removed without opening the very skull, as it seemed, to take it thence. Or he pities his long, clammy, attenuated fingers. He compassionates himself all over; and his bed is a very discipline of humanity, and tender heart.

He is his own sympathiser; and instinctively feels that none can so well perform that office for him. He cares for few spectators to his tragedy. Only that punctual face of the old nurse pleases him, that announces his broths and his cordials. He likes it because it is so unmoved, and because he can pour forth his feverish ejaculations before it as unreservedly as to his bed-post.

To the world's business he is dead. He understands not what the callings and occupations of mortals are; only he has a glimmering conceit of some such thing, when the doctor makes his daily call; and even in the lines on that busy face he reads no multiplicity of patients, but solely conceives of himself as *the sick man*. To what other uneasy couch the good

man is hastening, when he slips out of his chamber, folding up his *thin douceur* so carefully, for fear of rustling—is no speculation which he can at present entertain. He thinks only of the regular return of the same phenomenon at the same hour to-morrow.

Household rumours touch him not. Some faint murmur, indicative of life going on within the house, soothes him, while he knows not distinctly what it is. He is not to know anything, not to think of anything. Servants gliding up or down the distant staircase, treading as upon velvet, gently keep his ear awake, so long as he troubles not himself further than with some feeble guess at their errands. Exacter knowledge would be a burthen to him: he can just endure the pressure of conjecture. He opens his eye faintly at the dull stroke of the muffled knocker, and closes it again without asking “Who was it?” He is flattered by a general notion that inquiries are making after him, but he cares not to know the name of the inquirer. In the general stillness, and awful hush of the house, he lies in state, and feels his sovereignty.

To be sick is to enjoy monarchal prerogatives. Compare the silent tread, and quiet ministry, almost by the eye only, with which he is served—with the careless demeanour, the unceremonious goings in and out (slapping of doors, or leaving them open) of the very same attendants, when he is getting a little better—and you will confess, that from the bed of sickness (throne let me rather call it) to the elbow chair of convalescence, is a fall from dignity, amounting to a de-position.

How convalescence shrinks a man back to his pristine stature! where is now the space, which he occupied so lately, in his own, in the family's eye?

The scene of his regalities, his sick-room, which was his presence chamber, where he lay and acted his despotic fancies—how is it reduced to a common bedroom! The trimness of the very bed has something petty and unmeaning about it. It is *made* every day. How unlike to that wavy, many-furrowed, oceanic surface, which it presented so short a time since, when to *make* it was a service not to be thought of at oftener than three or four day revolutions, when the patient was with pain and grief to be lifted for a little while out of it, to submit to the encroachments of unwelcome neatness, and decencies which his shaken frame deprecated; then to be lifted into it again, for another three or four days' respite, to flounder it out of shape again, while every fresh furrow was an historical record of some shifting posture, some uneasy turning, some seeking for a little ease; and the shrunken skin scarce told a truer story than the crumpled coverlid.

Hushed are those mysterious sighs—those groans so much more awful, while we knew not from what caverns of vast hidden suffering they proceeded. The Lernean pangs are quenched. The riddle of sickness is solved; and Philoctetes is become an ordinary personage.

Perhaps some relic of the sick man's dream of greatness survives in the still lingering visitations of the medical attendant. But how is he, too, changed

with everything else! Can this be he—this man of news—of chat—of anecdote—of everything but physic—can this be he who so lately came between the patient and his cruel enemy, as on some solemn embassy from Nature, erecting herself into a high mediating party?—Pshaw! 'tis some old woman.

Farewell with him all that made sickness pompous—the spell that hushed the household—the desert-like stillness, felt throughout its inmost chambers—the mute attendance—the inquiry by looks—the still softer delicacies of self-attention—the sole and single eye of distemper alone fixed to itself—world-thoughts excluded—the man a world unto himself—his own theatre—

What a speck is he dwindled into!

In this flat swamp of convalescence, left by the ebb of sickness, yet far enough from the terra firma of established health, your note, dear Editor, reached me, requesting—an article. In *Articulo Mortis*, thought I; but it is something hard—and the quibble, wretched as it was, relieved me. The summons, unseasonable as it appeared, seemed to link me on again to the petty business of life, which I had lost sight of; a gentle call to activity, however trivial; a wholesome weaning from that preposterous dream of self-absorption—the puffy state of sickness—in which I confess to have lain so long, insensible to the magazines and monarchies of the world alike; to its laws, and to its literature. The hypochondriac flatus

is subsiding; the acres, which in imagination I had spread over—for the sick man swells in the sole contemplation of his single sufferings, till he becomes a Tityus to himself—are wasting to a span; and for the giant of self-importance, which I was so lately, you have me once again in my natural pretensions—the lean and meagre figure of your insignificant Essayist.

*Charles Lamb.*

---

## NOTES

**John Ruskin** was born in London in 1809 and was the only son of his parents who were both natives of Scotland. His father John James Ruskin was a flourishing wine merchant in London in the suburbs of which Ruskin's early years were spent. The elder Ruskin had received the old-fashioned classical education at the High School of Edinburgh; yet he had a taste for art and a love of natural beauty which were inherited by his son. The boy was of a very delicate health and year after year went on long driving tours with his father and mother through England and Scotland. In later life too Ruskin paid long visits to health-resorts on the mountains of Switzerland and on the sea side. These tours added to young Ruskin's inherent love of nature. His mother was a strict disciplinarian and made the boy read the Bible over and over again, as she wanted him to be a clergyman. The influence of the Bible is very noticeable in Ruskin's writings.

His parents were both keen on his education. He early developed a taste for drawing and writing verse. He went up to Oxford in 1837 and in 1839 won the Newdigate Prize for poetical composition. His health interfered with his academic work at this time and he took a pass degree in 1842. But his private studies in art resulted in the publication, in 1843, of the first volume of the epoch-making book *Modern Painters* which was meant to defend and popularise the genius of the English painter Turner. Other volumes of this book, *The Seven Lamps of Architecture* (1849) and *Stones of Venice* (1851-53) gradually established Ruskin's reputation as a great art-critic and in 1869 Ruskin was elected Slade Professor of Fine Art in the University of Oxford.

In the midst of his strenuous work as a student and a critic of art, Ruskin became interested in the welfare of his countrymen. He pleaded for an improvement in the condition of the poorer classes, especially in industrial areas and published books and pamphlets challenging the current economic conceptions in

England. *Unto this Last* (1862), *Munera Pulveris* (1872) and *Crown of Wild Olive* (1866) are some of Ruskin's remarkable books on economic and social questions. Ruskin was so disgusted with the industrial system that he established a society—the guild of St. George—for giving effect to his ideals of mutual help, education and good life in society.

Ruskin's style is graceful and yet eloquent. It reveals a great personality and a great power. Ruskin died in 1900.

**Thomas Henry Huxley** was born in 1825. He was the son of an assistant master of a semi-public school. Huxley was an extensive reader even in his childhood and was fond of working out mechanical problems. When he was only thirteen, he was apprenticed to his brother-in-law who was a medical man. Four years later he joined a hospital for further training and made a name by his researches. After having taken his degree, he accepted an appointment at the Naval Hospital, Haslar. In 1846 he made a voyage to Australia as an assistant surgeon on a ship. In 1851 he was elected a Fellow of the Royal Society for his research-work during this voyage and in 1854 he was appointed Professor of Natural History at the School of Mines. The laboratory system introduced by him here during his tenure of office has been almost universally adopted. Huxley was as much interested in elementary education as in the highest branches of science, and he served on the first London School Board in 1870. In 1876 he visited America and delivered in New York his famous lecture on the evolution of the horse. Honours were now showered upon him by the Universities of Aberdeen, Cambridge and Oxford and in 1883 he was elected President of the Royal Society. A life-long sufferer from dyspepsia, he retired from public life in 1885 and died in 1895.

Huxley has been called "Darwin's Bull-dog." He adopted the Darwinian theory of Evolution and was its most able exponent. He was an authority on Biology and in consequence of his controversies with theologians, was suspected by many to be an anti-Christian. His literary work consists chiefly of essays and addresses on scientific and philosophical topics. *Evolution and Ethics* is probably his ablest work. He had a passionate integrity and glowing idealism. He was full of polemical

vigour and fond of literary combats. As a literary man, he possessed a keen and lucid style.

**John Henry, Cardinal Newman** was born in London in 1801. His father was a London banker. His mother who was of French Protestant descent, taught him to love the Bible. Newman was educated at Oxford where he won a fellowship at Oriel College. He was much respected for his character and abilities and drew the undergraduates more and more around him. In 1824 Newman was ordained to the curacy of St. Clement's, Oxford, and in 1828 was appointed vicar of St. Mary's. Through his sermons preached here, Newman became a power in Oxford. But he was fast breaking away from the tradition of the English Church and on his return from a tour in the south of Europe, he felt convinced that his mission was to revive a more Catholic spirit in the Church of England. The well-known hymn, *Lead, Kindly Light*, written about this time, was an indication of his serious mental attitude. Newman now joined the Tractarian Movement and, after resigning St. Mary's, joined the Church of Rome in 1845. He then spent some time in Rome and later became the rector of the Roman Catholic University in Dublin. He died in 1890 at Birmingham.

Newman is known as the most illustrious leader of the Oxford Movement which was an attempt to reconstruct the English Church in harmony with the mediæval ideal. He is one of the great masters of English prose. His most important works are *The Arians of the Fourth Century* (1833), *The Idea of a University* (1852), *Callista* (1856) and *Apologia pro Vita Sua* (1864). Newman's style is simple and lucid. It has a chastened eloquence and a gentle persuasiveness. Its appeal lies both to the reader's intellect and his imagination.

**Thomas De Quincey** was born in 1785 and was a younger son of a Manchester merchant. He joined the Manchester Grammar School, but ran away from it when he was only seventeen and wandered for a year between North Wales and London. In 1809 he went up to Oxford. Here he did very little regular work, but studied German and became known as a voracious reader of

all sorts of books. He contracted about this time the vicious habit of taking opium. De Quincey was now attracted by the Lake poets, Wordsworth and Coleridge, and removed to Grasmere in 1809. He married in 1816 and, finding himself on the brink of poverty in 1819, took to journalism. He also lived in London and Edinburgh in connection with his professional work and died near Edinburgh in 1859.

De Quincey was small in appearance, and his disposition was very amiable. His voice was clear, soft and sweet. He had a great love for children and music. Though solitary and simple in his habits, he was not unsocial. His visitors, of whom there were too many, were very happy in his company. He helped many with loans and as a result suffered losses himself.

It was probably on account of his love of opium that De Quincey could not compose any great work. Most of his writings are of the size of journalistic essays. The best of them are *Murder as one of the Fine Arts*, *The English Mail Coach* and *Confessions of an English Opium-Eater* (1821) which is a collection of such essays. By virtue of the magnificence and grandeur of their style, they have attained a great position in English Literature. De Quincey is not very great as a critic or as a humorist, though he attempted to write criticisms as well as humorous sketches. He is not even great as a narrator. He is remarkable as a writer of fantastic prose—"a translator of wild disconnected dreams into lyric English." In him are to be found what have been called the musical qualities of English prose.

**Alexander Smith** was born at Kilmarnock in 1830. He was the son of a lace-designer and his parents being too poor to send him to college, he was placed in a linen factory to learn the trade. He wrote poems early in life and their publication gained him the post of Secretary to the Edinburgh University in 1854. As a poet, he had some reputation which was heightened by the publication of *War Sonnets* (1855) inspired by the Crimean War and the product of the collaboration of Smith and Dobell. There was a vein of Byronism in Smith's poems and he was therefore labelled as a member of what was called the Spasmodic School of poetry in his days. Smith later turned his attention to prose and published *Dreamthorp: Essays*

*written in the Country* (1863) and *A Summer in Skye*. His last work was an experiment in fiction. He died in 1867.

**Alfred George Gardiner** was born at Chelmsford in 1865. He attracted notice as the editor of *The Daily News* during 1902-19 and for his writings during the Great European War. His book *Pebbles on the Shore* (1916) is a collection of papers originally contributed by him to *The Star* under the pen-name of "Alpha of the Plough" during this war. His other publications include *Prophets, Priests and Kings* (1908), *The War Lords* (1915), *The Anglo-American Future* and *The Pillars of Society*. "The Jam Sahib" and "King George V" in the present Selections are taken from the last book.

**Thomas Babington, Lord Macaulay** was born in Leicestershire in 1800 and was the son of a wealthy merchant and philanthropist whose opposition to slavery involved him in financial difficulties. Macaulay was brought up amongst the strict (Protestant) Evangelical sect in London. As a boy, he became well-known for his prodigious memory and his extensive studies. He went up to Cambridge in 1818, became distinguished as a fine classical scholar and was elected to a fellowship.

Macaulay suddenly became famous by the publication of his essay on Milton in *The Edinburgh Review* in 1825. He had a mind to devote himself to literature but the failure of his father's business compelled him to think of some profession with a surer chance of a decent income. He was called to the Bar in 1826 and was appointed to a minor judicial post in 1828. He entered Parliament in 1830 as a Whig and soon distinguished himself as an orator.

Financial stress, however, induced him to give up political life in England and to accept the post of Law Member of the Supreme Council in India. He was in this country for four years (1834-38) during which he drafted the Indian Penal Code and organised the system of education in Bengal. On his return to England, he again entered Parliament and became the Secretary of State for War in 1839 and Paymaster-General of the Forces in 1845.

*The Lays of Ancient Rome* came out in 1842 and the first two volumes of his *History of England* in 1848. Two other volumes were published in 1855 and the fifth after his death. In 1857 Macaulay was raised to the peerage. He died suddenly in the midst of his work in 1859 and was buried in the Poets' Corner in Westminster Abbey.

Macaulay's style is vivid and picturesque but it has certain mannerisms and a passion for antitheses. Macaulay is not always impartial, either as an essayist or as a historian. He is often carried away by a partisan spirit. But the range of his studies and his general soundness of judgment make his *Essays* (1843) "the classic book of English criticism."

**James Anthony Froude** was born in Devonshire in 1818 and was educated at Westminster School and at Oriel College, Oxford. He came under the influence of Newman at Oxford, but when Newman became a Catholic, Froude, who had taken Holy Orders, gave up his faith and the idea of proceeding to the priesthood and became a philosophical sceptic. He became very unpopular for his unorthodoxy and one of his books (*The Nemesis of Faith*) was publicly burnt in the hall of Exeter College, Oxford, of which Froude was a fellow. He thereupon resigned his fellowship. His father now withdrew his allowance and an appointment as Head Master of a Grammar School was actually cancelled. An anonymous gift, through Prof. Max Müller, saved him from dire misery.

Froude now became a regular contributor to literary journals. His contributions later came out as *Short Studies on Great Subjects*. His famous *History of England* in twelve volumes appeared by instalments between 1856 and 1870 after which he lectured in America, travelled as a Government Commissioner in Africa and visited Australia and the West Indies. Froude was elected Lord Rector of St. Andrews University in 1869 and in 1884 Edinburgh conferred upon him the LL.D. degree. Froude was a close friend and disciple of Carlyle and on the latter's death in 1881 he published the *Life of Carlyle* which was looked upon as very unfair to the departed great man. In 1892 he was appointed Professor of Modern History at Oxford where his book had been burnt publicly a few years ago. He died in 1894.

Froude has been called the most brilliant of the Romantic school of historians. He has many inaccuracies which make him very unreliable. But it is claimed that he made the Elizabethan age live in his pages. Froude could not shake off his own impressions and convictions and this made him appear like a partisan, though his sole object was to find out the truth. He has few mannerisms; yet he cannot be called a master of style. He uses English as a strong and useful weapon of offence and defence. He is always forcible, occasionally rising to heights of real eloquence.

Robert Louis Stevenson was born in 1850 in Edinburgh. He was the only son of a Scotch engineer who became famous by the construction of lighthouses on the English seaboard. He was educated at the University of Edinburgh and was called to the Bar; but on account of his ill-health, he had to live abroad for long periods. He visited America more than once, made three voyages to the Pacific Islands and led an almost vagrant life in search of health.

Stevenson settled after his long wanderings in the island of Samoa in the Pacific Ocean. Here he lived in his last days like a native chieftain and tried his best to alleviate civil troubles amongst the natives. He died in 1894.

His first books were charming impressions of some of his tours, marked by a fresh curiosity towards everything that he saw. But he also tried his hand at other forms of literary work. *Virginibus Puerisque* (1881), a collection of thoughtful essays and *Familiar Studies of Men and Books* (1882), a series of criticisms, are both deserving of mention. His first stories, *New Arabian Nights* and *Treasure Island* (1882), established his reputation as a writer of fiction, though people were not convinced then that he could be more than a writer for school-boys. His subsequent works, e.g., *Kidnapped* (1886), *The Master of Ballantrae* (1889) and *Catriona* (1893) removed this suspicion and showed his skill of invention and dramatic power.

Stevenson's earlier prose is marked by affectation and a painful quest of the right phrase. But this sense of effort and his mannerisms disappear from his style in his later novels like *Catriona*.

Stevenson wrote poetry on rare occasions, merely to give immediate expression to his personal moods or to keep up the practice of his favourite poetic forms. Of his poems the best known is *Underwoods*. *A Child's Garden of Verses* (1885), a collection of children's poems and a volume of ballads published in 1890 contain his experiments in different forms of verse.

**Andrew Lang** was born in Selkirk (Scotland) in 1844 and was educated at Edinburgh Academy and at St. Andrews at Edinburgh and later at Balliol College, Oxford. He won high academic distinction by obtaining a First Class in the Final Classical Schools at Oxford and a Fellowship at Merton. He settled in London after his marriage and in 1875 commenced his career as journalist and author. He wrote leaders for newspapers and also found time to publish books on history, anthropology, religion and classical literature. Lang was a poet, but his poems were mostly written in hours of relaxation in the midst of hard work. Many of his poems are in the lighter vein, but there are others which recast old ideas—ideas of Homer or of French poets now almost forgotten. Lang's critical essays are quite good and they are written with knowledge and enthusiasm, though they bear marks of hasty composition. He did much to popularise Scottish history. Lang collaborated with S. H. Butcher in producing a prose translation (1879) of the *Odyssey*, and with **E. Myers** and **Walter Leaf** in a prose version (1883) of the *Iliad*. Both are remarkable for accurate scholarship and excellence of style. As a Homeric scholar of conservative views, Lang took a high rank. He died in 1912.

**Herbert George Wells** was born in Kent in 1866. His father was a professional cricketer, but he had also a small business which, however, did not flourish. The boy had therefore to leave school at the age of thirteen, though he was a devoted student and an extensive reader. He tried at first to learn the drapery trade and was then employed in a chemist's shop. He now had an opportunity of attending some classes and with his new qualifications got a post as a pupil-teacher and later as a teacher at a Grammar School. With the help of a scholarship

obtained here, Wells joined the College of Science at South Kensington in London where he worked under Professor Huxley. In due course he passed his B.Sc. with first-class honours. This secured for him a mastership at Henley House School, St. John's Wood. He also became a coach for the old University Correspondence College and used to write for the journals.

Wells attracted notice at this time for his humorous articles some of which were published anonymously in reputed journals. His first novel was *The Time Machine* (1895) which was followed by *The Invisible Man* (1897) and *The War of the Worlds* (1898) and about thirty other books which have added to their author's reputation.

Wells is known to the modern reader as a writer of scientific romances, a social reformer and as a sociological novelist. He is a thinker more than a literary artist. Yet it is said that he has no definite theory of life, though he is full of highly stimulating ideas on life and conduct.

**Lafcadio Hearn** was born in 1850 in one of the Greek Ionian Islands called Leucadia whence was derived his name of Lafcadio. He was the son of Surgeon-Major Charles Hearn, an Irishman who during the English occupation of the Ionian Islands, was stationed there and married a Greek lady. Lafcadio Hearn had no regular education. He was for a time a student at a Roman Catholic College of Durham, but he left the College and went to America when he was only nineteen. At this time he gave up his faith (Catholicism). In America he had to maintain himself by hard work in newspaper-offices. He soon made his mark in journalism and married an American lady who afterwards got a divorce from him. Hearn was an extensive reader but his habits were erratic and his temper romantic. In 1891 he went to Japan as the correspondent of an American newspaper. But he soon cut off his connection with this newspaper and settled in Japan with the object of studying the country, its people and its art and culture. His books on Japanese subjects are widely appreciated. *Out of the East* (1895), *Gleanings in Buddha-fields* (1897), *A Japanese Miscellany* (1901) are some of his well-known works. Hearn became a teacher of English in the University of Tokyo and was

captivated by Japanese ideals. He married a Japanese lady, became a naturalised Japanese under the name of Yakumo Koizumi and embraced Buddhism. He died in 1904. Hearn's literary powers were undoubted and he combined with them real knowledge and originality of thought.

The Rt. Hon. **Herbert Albert Laurens Fisher** was born in London in 1865. He was educated at the Universities of Oxford, Paris and Göttingen. He had a brilliant career at Oxford where he obtained a First Class in Classical Moderations and Literæ Humaniores. Mr. Fisher delivered the South African Lectures in 1908, the Lowell Lectures in Boston in 1909 and 1924 and the Chichele Lectures in Foreign History in 1911 and was Vice-Chancellor of the Sheffield University during 1912-16. He is an Honorary LL.D. of Edinburgh, Manchester, Cambridge, Liverpool and Oxford. He was returned to Parliament in 1916 and was President of the Board of Education during 1916-22. He was elected a Fellow of the Royal Society in 1920. Mr. Fisher was a member of the Royal Commission on the Public Services of India and has been Warden of New College, Oxford, since 1925. His most important publications include *The Medieval Empire* (1898), *Studies in Napoleonic Statesmanship* (1903), *Napoleon Bonaparte* (1913), *Life of Lord Bryce* (1926), and *Life of F. W. Maitland* (1910). As a student of History, he is very widely known and he writes with knowledge and mature judgment.

**William Makepeace Thackeray** was born in Calcutta in 1811 and was educated at Charterhouse and in the University of Cambridge. He took no degree but early developed a love of literary work. His writings were at first published in literary journals. In two of his earlier books he recorded his impressions of things in general. In *The Book of Snobs* (1848), he appeared as a critic of men and society. Thackeray is, however, famous as a novelist and some of his important novels are *Vanity Fair* (1848), *Pendennis* (1850), *Esmond* (1852) and *The Newcomes* (1855). In the *Roundabout Papers* (1863) are displayed his power as a talkative essayist. *The Four Georges* (1861) and *English Humorists* (1853) demonstrate Thackeray's talents as a historian and a critic. Thackeray died suddenly in December, 1863.

\*In his novels Thackeray has painted English society as few have done. He has drawn it as a man of the world who had seen and travelled much. He is also a master of roaring farce and the author of some of the most laughable things in the world. Yet he is at the same time full of pathos. 'In the middle of his most humorous scenes he turns round in amiable contradiction and, by a single phrase or sentence, moves us to tears.' Thackeray has been called a cynic. His humour, delicate as it is, very often leans to the side of bitterness.

**Sir James Hopwood Jeans, Kt.**, was born in 1877. He was educated at Trinity College in the University of Cambridge where he was the second Wrangler in 1898. Jeans was the Smith's Prizeman of 1900 and was elected a Fellow of Trinity College in 1901. He was appointed a University Lecturer in Mathematics in 1904, and was the Professor of Applied Mathematics in Princeton University during 1905-9 and the Stokes Lecturer in Applied Mathematics at Cambridge during 1910-12. He worked as Secretary of the Royal Society from 1919 to 1929 and has been Research Associate, Mount Wilson Observatory, since 1923.

Sir James is a distinguished thinker and writer. He is a student of Physical Science and Mathematics, and he has tried to present scientific ideas in a charming style which has smoothed down most of their difficulties. He has published books on Electricity, Mechanics, Astronomy and Cosmogony. *The Mysterious Universe* from which the chapter entitled 'The Dying Sun' has been taken, was first published in 1930.

**Sir Archibald Geikie** was born at Edinburgh in 1835 and was educated at the local high school and at the local University. He was appointed an assistant on the Geological Survey in 1855 and became Director of the Geological Survey for Scotland in 1867, Professor of Geology in the University of Edinburgh in 1871 and Director-General of the Geological Survey of the United Kingdom in 1881. He had been elected a Fellow of the Royal Society as early as in 1865. The study of Geography received a great impetus from him in Great Britain and the Science of Geology received many important contributions from him. He was President of the Geological

Society in 1891-92 and was knighted in 1891. He died in 1924 at the ripe old age of 89.

Though Geikie was a geologist, he had considerable literary talents. His style is simple and lucid and he can make scientific topics interesting to common people. 'Science in Education' in the present volume is taken from his book *Landscape in History*.

**James Stalker** was born at Crieff in Scotland in 1848 and was educated in the Universities of Edinburgh, Halle and Berlin. He took Orders in due course and was the incumbent of many pastorates in Scotland. Stalker's published works include *Life of Jesus Christ*, *Life of St. Paul*, *The Preacher and His Models*, etc. In 1891 he delivered the Lyman Beecher Lectures on Preaching at Yale which were widely appreciated. He was well-known as examiner for the degree of B.D. in Aberdeen University and as Professor of Church History in the United Free Church College of Aberdeen.

**Charles Lamb** was born in London in 1775 and was the seventh and youngest child of his parents. Lamb's father was a lawyer's clerk in indigent circumstances. Had it not been for the presentation at the school known as Christ's Hospital, which was obtained for him by his father's patron, Lamb would have been without education in his early life. On leaving school, he accepted a clerkship in the Accounts Office of the East India Company in 1792.

His life which might have been happy, really took a tragic turn. He was disappointed in love and had also a fit of insanity. When Lamb recovered, his elder sister Mary became insane and in one of her paroxysms she killed her mother and wounded her father. Lamb then took her under his protection and nursed her with great tenderness. He remained her guardian till his own death, though this meant the sacrifice of many of his dreams and ambitions. In her saner moments, Mary was a sympathetic companion and she collaborated with him in writing the *Tales from Shakespeare* (1807). Lamb retired in 1825 and died in 1834. He was survived by his sister for 13 years.

Lamb was a humorist and a critic. His *Essays of Elia* which was published in a collected form in 1823 and was followed in 1833 by the *Last Essays*, contains most of his humorous writings. His laughter, it has been said, is blended with tears. His humour really borders, in most cases, on pathos. Lamb began the study of Elizabethan Literature quite early in life and he had an enthusiasm for forgotten writers. In his *Specimens of English Dramatic Poets* (1808) he collected an anthology from many of the dramatists and poets of the sixteenth and seventeenth centuries with critical notes. These criticisms, terse as they are, reveal Lamb's powers as one of the greatest of English dramatic critics. His style is marked by a sort of garrulity, but it is the best example of a literary style which is refined and yet free from pedantry.
